EDITORIAL

To start off I would like to say thanks again to those people who take the time out to send us a letter. In one of these letters that was sent to us somebody made the statement that we must be doing very well for the amount we charge for the magazine compared to what is in it. So I thought I would take this opportunity to tell you the cost of producing a magazine.
All the details are on the next page.
Well now to tell you of our future plans. We sent a letter to one of the leading publishing companies in Japan and with a bit of luck by the next issue we can have some good news for you, if we do get into Japan with our magazine we could get advertising from the software companies such as ASCII which is one of the biggest software dealers in the world, While we are on the subject of ASCII we are still waiting to hear from them regarding MSX2 in Australia.
Brod Brown is in england at the moment, and while he is over there he is trying to drum up some business for us in the way of subscriptions.
When Brod comes back he will be joining us and with his experience I think we can really make this magazine take off, of course this also means your help.

IMPORTANT

We have received tapes and disks from people for various things such as soft-adds.
Please include return postage if you want your tape or disk back.
We are an extremely low profit magazine and can not afford such things.
One more thing about sending in things, if you write us a letter and you want a personal reply please include a stamp addressed envelope and you phone number.

FRONT COVER WINNER

This issues front cover winner is -
------ JASON WARD of N.S.W. -------

Keep those cover ideas coming !!!

THE COSTS OF MAKING A MAGAZINE

1.. Magazine materials. (material cost)
Paper, Glue, Pencils, Pens etc ---------- $10.00

2.. Typing time of articles. (time cost)
25hours @ $4.00 per hour (very cheap) --------- $100.00

3.. Dump articles to printer. (time + material cost)
Setup time plus 1 Ribbon ------------ $30.00

4.. Cut-up and gluing. (time cost approx 9 hours)
Cut-up articles and titles to suit best layout --------- $10.00

5.. Articles.
Payment of articles written by our column writers ------- $40.00

6.. Front cover.
Payment of our artist and front cover winner ---------- $40.00

7.. Printing.
Send magazine to printers and pick it up ------------- $660.00

8.. Sorting & Bagging. (time + material cost 7 hours)
Sorted into State & post code, Bagged and labeled ----- $70.00

9.. Posting.
Cost of sending magazine around Australia & Overseas -- 190.00

10. Hidden costs.
There are so many hidden costs such as -
Phone bills
Electrical bills
Car
Stamps
Cheque account bills
Etc etc etc.

I could not put a price on hidden costs but the total from the rest comes to $1,150.00 per month x 12 months = $13,800.00 a year

We have at the time of publication 386 subscribers.

386 x $36.00 = $13,896.00
minus costs $13,800.00
$96.00 not bad for a year.

These figures are not exact but they are very close.
I hope this answers the question of us puting in for an early retirement and living off our vast earnings

If any one has anything to say about the magazine be it good or bad we want to hear from you, anything you wish to bring to our attention or new ideas or innovations you may have, we want to know about them and so do the rest of our readers.

****
* * * * MODEMS * * * MODEMS * ** * MODEMS * * * MODEMS * * * *
****

It has come to notice of late that there has been a few fortunate people how have had the chance to purchase that most interesting piece of electronics the " MODEM "!!

Providing we get the support and the involvement from the indiviuals to start up a MODEM-CLUB. The club will be constucted in various forms so as to try to keep most people happy.

In the best interests of both parties it may be a good idea to have made prior arrangements before the MODEMS are coupled up. This club will only succeed if the support is forth-coming else like so many other goood ideas this to will go down the gurgler.

In order to run a club such as this we do need the input from the individuals.
1. NAME.
2. ADDRESS.
3. PHONE NUMBER.
4. TYPE OF MACHINE FOR MODEM (ie SV or MSX)

Once the above information has been received it'll then be categorised and processed to be sent out to the people who require the MODEM list. The list will basically be devided up into two parts namely SECTRAVIDEO and MSX. This is further broken down for listed and phone numbers and private phone numbers.

LISTED PHONE NUMBERS.

The listed phone numbers are for the people who are quite prepared to let their number be published in the magazine. So these numbers will be published in the magazine once they have been processed. After being posted and received by the subscribers, then an individual may be looking to contact someone and that may be you.

PRIVATE PHONE NUMBERS.

Private phone numbers are for those people whom don't wish to have their number displayed in the magazine for fear of reprisals or misusage of their phone number. This virtually works on the same principle as the listed numbers except for the fact that these phone numbers are not actually published in the magazine. These numbers can only be obtained if someone writes in and asks for the complete list numbers that are available at that time. The people who send in their private phone number will receive a complete list of listed and private numbers. These lists are also available for the listed phone numbers but only on receival of a written request. Some other vital information that must be received in order to construct these lists are,

A. AREA CODES TO BE INCLUDED WITH PHONE NUMBER.
B. STATE CLEARLY AS TO WHETHER YOU WANT YOUR NUMBER LISTED OR TO BE PRIVATE.
C. PREFERED TIMES OF CONTACTING (ie mornings, afternoons or evenings what ever.)

NOTE THIS PARAGRAPH

THE MAGAZINE COMPUTER FORUM DOES NOT ACCEPT ANY RESPONSIBILITIES IF YOU HAVE NOMINATED YOUR PHONE NUMBER TO BE MADE LISTED. SO MAKE SURE YOU HAVE EVERYONES CONSENT BEFORE YOU MAKE YOUR NUMBER LISTED.

POINTS TO REMEMBER.

Remember that all charges between MODEMS once connected are a standard Telecom charge providing that you are in the required boundaries and zones. If you are thiking of going further for example ISD or STD the choice is yours, one thing to remember is that once the two machines are coupled up you are being charged the lenght of time which is measured in minutes and part there of. So watch your phone bill and also remember to take an account of the time difference when dialling ISD or STD between different states or other countries.

PROBLEMS

This could be helpful for those people who are having some sort of problem and their may be someone who has come across this situation before and instead of us doing all the hard work, then may be you could send in your answer to these PROBLEMS... So if you have a PROBLEM let us know and with a bit of luck there could be someone who has come across this same situation before and has the answer.

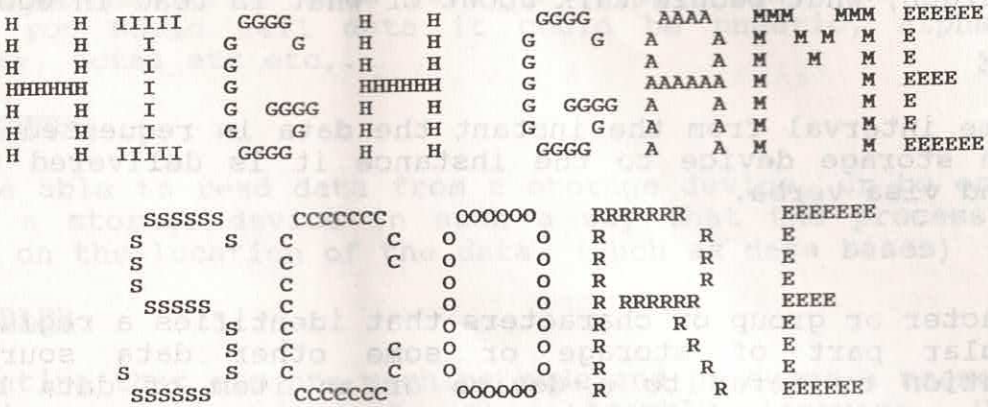

PROBLEM 1

R. K. BAXTER.

EQUIPMENT BEING USED - Sony HB-75AS computer. Sony PRN-41 colour Plotter Printer. Interlink M.S.X. MODEM. My problem is that although I receive VIATEL on the screen in perfect condition, whenever I attempt a screen dump to the plotter/printer any words or numerals are printed out in a mixed collection of letters,graphics or symbols. This problem also occurs when using the local communication, where at the same time I get this jumble of useless printing when I echo my transmission or the input received to my screen "Please what am I doing wrong ? or what am I not doing that I should be doing ?"

ANYONE WHO HAS COME ACROSS THIS SITUATION AND HAS AN ANSWER TO THIS PARTICULAR PROBLEM THEN LET US KNOW AND THE INFORMATION WILL BE PASSED ON ACCORDINGLY. SO IF YOU TO HAVE A SLIGHT HIC-CUP AND IT'S TO DO WITH THE MODEMS THEN LET US KNOW AND WE WILL TRY AND GET TO THE BOTTOM OF IT .

HAPPY COMMUNICATING

COMPUTER JARGON

This column will hopefully help you understand a little about Computer Jargon, what people talk about or what is read in books.

ACCESS TIME

The time interval from the instant the data is requested from a storage storage device to the instance it is delivered to the CPU, and visa versa.

ADDRESS

A character or group or characters that identifies a register, a particular part of storage or some other data source or destination or refer to a device or an item of data by its address.

ALGOL

ALGOrithmic **L**anguage, an early block structured language providing many elegant features that were lacking in other early high level languages.

BASE ADDRESS

An address which is used as a reference value. It is combined with a relative address to form an absolute address.

BASIC

Beginners **A**ll purpose **S**ymbolic **I**nstruction **C**ode. A high level language with a simple syntax and is widely used in micro computers. Normally used in the interpretive mode and needs to be compiled for speed.

BIDIRECTIONAL PRINTING

A method of printing in which a line is printed from left to right and the next from right to left, saving time by avoiding unnecessary carriage movement of the the printer head.

CACHE MEMORY

A very high speed buffer memory into which instructions from main storage are loaded and executed at a faster rate than if executed directly from main memory.

CALL

The action of bringing a program, routine or subroutine into effect, usually by specifying the entry conditions and jumping to an entry point.

CENTRAL PROCESSING UNIT

The **CPU** is a unit that contains all the circuits that control the performance and execution of instructions, generally contains the **ALU** (Arithmetic logic unit) and a number of special registers and control units.

DATA

Information that is put into the computer then processed then the computer gives some sort of output. There is no limit on what you would call data it could be numeric, alphanumeric, binary, octal etc etc,.

DIRECT ACCESS

To be able to read data from a storage device, or to enter data into a storage device in such a way that the process depends only on the location of the data. (Such as data bases)

DISASSEMBLER

A routine that excepts machine code and produces a mnemonic code listing corresponding to the assembly language. Used for debugging machine code programs.

EMULATOR

This is special purpose software or hardware which enables a computer to act as if it was another computer. It is used to minimize reprogramming when a new computer replaces an old one.

EPROM

Erasable Programmable Read Only Memory, is a PROM(Programmable read only memory) which can be programmed electrically, but it can also be erased by ultraviolet light and then reprogrammed.

EXTERNAL SORT

The second phase of a multipass sort in which strings of data are continually merged until one string of sequential data is formed.

FIFTH GENERATION COMPUTER

The proposed series of computers, to be produced in the early 1990's, which will have radically new design and exploit the potential of Artificial Intelligence.

FILE

A collection of records which are logically related to each other and handled as a unit, for example a data base record.

FIRMWARE

A program or data that has been stored in a computers memory for example a ROM, PROM, EROM or EPROM. This method of implementing software contrasts with programs held on magnetic tape or disk and which must first be loaded into the RAM memory of the computer before they can be used.

Well I hope you feel a bit wiser than you were, or are you even more confused ???

CLUB SCENE

from the **BRISBANE SVI & MSX USERS GROUP**

DEAR ROSS,

Thanks very much for the latest issue of Computer Forum. Congradulations on doing a great job.

We had our monthly meeting of the Brisbane User Group this week and generally agreed that we would like to support you in any way that we can, as there are now so few avenues of support left for owners of SVI & MSX computers.

We have about 42 members in our group, scattered around Australia, and I will be encouraging them to subscribe to your magazine, if they don't already.

I am enclosing a printout of a modified version of Brian Parker's screen dump program. This version allows the user to nominate which colours are to be printed rather than having to change the program each time. You also didn't mention that the program is for Epson-type printers.

The other printout is a screen dump for a Sony Printer-plotter, which I believe is the same as the Toshiba one. It's great to see a multi-coloured dump, even if it is slow.

Keep up the good work!
Yours sincerely,
(Mrs.) lucille Parker Secretary

Thank you for sending the printout of Brian Parker's screen dump program and the Printer-plotter printout. Our local User Group tried out the screen dump to the Printer-plotter at their last meeting. Your right about the multi-coloured dump and the speed [or lack-of speed]. Is there a programmer out there that could trasform this basic program into machine code. If so, then please let us know so that we can put it in Computer Forum for our readers.

We also thank you for pointing out that Brian Parkers screen dump is for Epson-type printers and a big thank you to all your members for their vote of support. We need all the support we can get.

following is the screen dump for MSX Printer-plotters and the updated version of Brian Parker's screen dump for **Epson-type** printers.

Your Assistant Editor

CLUB SCENE

The following letter was recieved from John Halford of the Melbourne Spectravideo and MSX User's Group....

Our thanks to your magazine for publishing my name as a contact for the Melbourne Spectravideo and MSX User's Group as we have had a number of new members this way. We now have the problem that we have to move to larger premises at the Nunawading Library meeting room, still on the first Saturday afternoon of the month.

We have members with both Sectravideo and MSX computers, with interests in games, graphics, music (Yamaha CX5), amateur Television (Pioneer PX7), Modems, Paddles, Robots, Interfacing etc etc.

for Sectravideo 318/328 owners try the following:-

```
10 OUT &H88,7
20 OUT &H8C,&B01000000
30 OUT &H88,14
40 OUT &H8C,A
50 GOTO 50
```

"A" will appear on the joystic ports pins 1 - 4 port 1 and port 2, in other words an 8 bit output port (A = 0 to 255). Sorry for the MSX people but there seems to be a buffer in the road to output.

I hope we can give you some more bits and pieces later, thank you for a good magazine.

JOHN HALFORD

Thank you, John, I'm sure our readers will try this out and we would welcome more "bits and pieces" to pass on to our budding "HACKERS".

MAX
your "budding" Assistant Editor

WANTED WANTED WANTED WANTED WANTED

Information leading to the capture of S.W. McNamee's Double Sided CP/M BIOS for the SV 328, including instructions for the modification of the SV 801 disk controller. Also the CP/M BIOS to suite the MSX SVI 738 X'PRESS by S. McNamee.

Please write to... MSX & SVI User's Group, P.O. BOX 87, Mt Hawthorn, Perth, W.A. 6016

THE CASE OF THE MISSING CHIP

The following letter was sent in by Greg Robertson, of North Melbourne, Vic.

The other day I pulled my SVI-328 apart to give it a proper clean out and discovered a vacant spot on the board. On further investigation of this vacant area I found that it was marked ROM 01 with the number at the end being IC27.

As my computer is a MKII I am wondering if Spectravideo have left something out or the Rom Chip in question has been located elsewhere on the board! I also have a friend who has the same model of computer and he has given me a number which may be the same as the one I am missing. The chip number is M38128A-05 OKI JAPAN 4543.

Two questions come to mind, and they are:-

1. Why is my SVI-328 functioning normally without this missing chip.
2. What functions would the missing Rom Chip perform inside the computer.

Apart from no "Bytes Free" message on initial boot-up, all the functions work perfectly, and I can also run machine code programs without a hitch. I hope you, or someone out there, can help me solve this puzzle as soon as possible.

I am also including a couple of tips for use on the SVI-328, which none of the manuals, that I have read, cover.

1. SCREEN,0 Takes the function key display off the screen but leaves everything else on the screen. This is usefull if you are doing something in direct mode and you don't want to do it again.
2. SCREENO,1 Clears the screen and re-displays the function keys. This is usefull if you forget what functions you have programmed in yourself.
3. SCREEN,1 This is the same as Screen,0 but, with this command, you bring the display back on the screen instead of making it dissappear.

WHAT? ONLY TWO QUESTIONS?

Thank you, Greg, for the tips. These will also work on the SVI-318.

The "MISSING" chip was a 16K ROM and two of these were needed for 32K ROM. The chip you describe is a 32K Rom which performs the same function of the older two chip setup. The only difference seems to be the lack of the "Bytes Free" sign-on at the beginning.

PENGUIN ADVENTURE

(ANTARCTIC ADVENTURE 2)

Written by: KONAMI (JAPAN)

I quite liked Antarctic Adventure, which used to be distributed by Sony. This is the sequal to the first one.

PENGUIN ADVENTURE is on a ONE MEGA-BIT ROM CARTRIDGE. This game is excellent and way beyound the usual Konami standards.

The game plot is similar to that of Antarctic Adventure, but the graphics & sound are better and certainly is more effective.

Buy various items, such as a gun, shoes (to make you run faster), etc, by falling in certain holes in the ground and bartering for the goods you want with fish, which you collect as they jump out of holes.

Highly recommended. Unlike many games, this one will keep your interest and addiction for many years to come.

An ideal game to "SHOW OFF" to other "DOOR STOP" computer owners..

PENGUIN ADVENTURE $A59.95 on Cartridge

FOOTNOTE:
Our initial copies of this game were supplied with the Japanese manuals, but by the time you recieve this issue the English manuals will be available for ALL orders.

ADVENTURES ANONYMOUS

WITH YOUR GUIDE ALAN CRAWFORD

Welcome once again to A.A. This month I will be devoting most of the column to starting off in an adventure, especially for the first time adventurer. I, like most adventurers who get a new game to play, can not wait to see what the game is all about. So after loading the game in, its off we go, stumbling our way through dark dense jungle, rapidly flowing rivers, crumbling rocky outcrops and sooner or later realising that we are lost, or worse still, have been killed. Then its time for sanity to prevail and get down to the serious part of mapping it all out.

When I start an adventure I usually have sheets of A4 paper and start mapping in the middle of the page. Don't use small pieces of paper and don't try to fit everything on to one piece, this just does not work and you will find yourself lost in your own map. When you come to the edge of the paper get another sheet and continue from where you left off. Most adventures are split up into different stages, with a number of locations to each stage. These stages can often be fitted onto one large sheet of paper. The best example of this is LORDS OF TIME where there are nine time zones and each time zone can be and should be drawn as completely seperate maps.

You may have to redraw your maps from time to time, but in the long run it is well worth the extra work. You may find some stages of an adventure will be too big to fit onto one piece of paper, I find it just as easy to join two or more sheets of paper together to form one large map than to have a lot of smaller ones. Providing you have the space to work.

I start by drawing a box in the middle of the sheet of paper and writing the screen location in it e.g CONTROL ROOM, OUTSIDE SMALL BUILDING or N.S. CANYON. Try to use initials wherever possible e.g N for NORTH, S for SOUTH NE for NORTHEAST its neat and takes up far less space. The main advantage of using a box for your screen locations is that you have four sides for your main compass points and four corners for the other four points. UP and DOWN can usually be fitted on somewhere. Then under the box I write what, if anything is at that location e.g LAMP, BUNCH OF KEYS, SANDWICHES. Anything that you may be able to use. I write this in red, because it is easy to read when you glance over your map looking for a particular item. Remember that usually, everything you find has a use. Also don't be in a hurry to disgard an object once you have used it, many objects are used more than once. If you take an object with you that you think you will need and then you drop that object , you should always make a note of where you have dropped it. You should never assume you will be able to remember where you dropped it. This situation will occur quite often, as in most adventure games you will only be allowed to carry a certain number of

objects, usually four. If you do drop an object in a location other than where you found it, then write it on your map in pencil at the new location, this will save you a lot of time running around looking for it at some later stage in the game when you are in a hurry to find it. Anything written with a pencil can easily be erased.

In the last column I mentioned briefly about the possible exits from each of the screen locations. In some games you are told of the only possible exits and in others you must work them out for yourself. In addition to N,S,E and W, you may also have NE,NW,SE and SW. If you include UP and DOWN, it gives you ten directions that you may go in. I've found that quite often only the four main compass points are of any real use and the remaining four points of the compass quite often only lead you round in circles. But be warned this is not always the case, and you will have to be on the lookout for that, its mainly a case of trial and error, with the emphassis on the error. UP and DOWN usually do have a purpose, but once again, trial and error.

Another problem in mapping a game comes with illogical directions. If you leave one location by the NORTH exit never assume you will enter the next location from the SOUTH. The path that you take may go around a corner or could be a twisty passageway, and you may enter the next location from the EAST or from the WEST etc. If for example you leave location 1. by the NORTH exit, try to return to that location by going SOUTH. If that works then you can go ahead and draw a straight line connecting both locations. But if you end up somewhere else or can't move in that direction, you will need to find which direction will take you back to location 1. Try going EAST or WEST or any other direction until you return to location 1. Then draw a curved line from where you left location 1. to where you enter location 2. When I start mapping I look at the possible exits and take each one at a time, returning to the original location after each move. That way you can gradually expand your map as you go along and later on you will be able to find your way through the map quickly. Drawing the lines in pencil first, between the different locations is usually the best way to start your map. When you are sure that what you have drawn is correct then go over the lines with a pen. If the direction you went in is a one way direction, then draw an arrow on the line in the direction you can go. That way you will know that there is no going back that way.

Answers to readers letters

ADVENTURE QUEST

MARK RUSSELL, VIC. Needs help to get through the desert. Well from the south edge of the trackless desert its N,N,W,N which will take you to the trackless desert above the canyon from here you can only go EAST, this will take you to the pyramid. In answer to MARKS second question the answer is yes you can go west from the small building without getting lost in the forest, its W,W,W,S,S. this brings you out by an oak tree where you should be able to find a silver ball, this in conjunction with the small sling comes in very handy when you eventually meet the giant. To return from the oak tree just go N,N then E. this will take you to the N.S. valley by the stream. Question three regarding the pan pipes, you will have to play the pipes on top of the pyramid to get rid of the snakes.

BRIAN STAMP, VIC. who is stuck at the beginning of ADVENTURE QUEST should next try taking the orchid to the woodland where he will find a unicorn. Give the orchid to the unicorn and follow him (or her) north and it! will lead you to the pan pipes and the medallion. Other answers this page should help.

RETURN TO EDEN

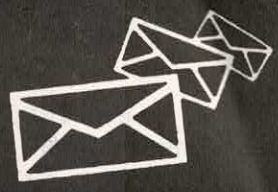

Seems to have a few people stumped, firstly JOHN WALTERS, N.S.W. wants to know how to get the credit card back from the robot. Well JOHN firstly pull the plug on the robot to deactivate it, then from the corridor just past the robot you go EAST and then continuely up and you will find yourself on the roof, there is a jug of water here, take the jug back to where the robot is and then go south to the hall of fire where you will find the godfather, throw the jug of water over the godfathers bodyguard and retrieve the credit card.

ANDY MITCHELL, S.A. is also having difficulties with RETURN TO EDEN. ANDYS problem is the two platforms in the tree above the woodpile. There are two platforms supported by vines over a pulley. If you pull the lever the lighter platform goes up and the heavier platform goes down. You weigh the same as five ordinary objects, so if you put six objects on the south platform and then stand on the north platform carrying nothing you would go up when you pulled the lever, as there are two objects up the tree that you want, you will need to work out how many objects to place on the platform. Remember that the fig leaf and the stone fruit both weigh different amounts.

If you are having problems with an adventure please write to me and I will try to help. But don't forget to enclose a S.A.E if you want an answer before the next edition of the magazine comes out. Also if you where stuck in an adventure and have now solved it or you have something you would like to say about adventure games, why not let your fellow adventurers in on it. Just drop me a line and I will pass on your solutions or comments.

Till next time, Bye for now. ALAN

MAILBOX

Hello Mailbox,

My problem is that I have been given some games that are on disk in MACHINE CODE, and I have been unable to run most of these games although the exact same games run very well on my friends computer (who has a SPECTRAVIDEO 728). My computer is a TOSHIBA HX-10 we also are running the same disk drives in the same manor by this I mean they are both plugged into the cartridge port yet I still are unable to run them.
It was suggested that it may be the slot management system, I really don't know can you help me.

Signed HELP.....ME

Dear HELP.....ME,

We have handed your problem onto Robert Brinkworth and with a bit of luck he will solve it by the time we publish the next issue until then borrow your friends computer.

G'DAY,

I'm wondering if you could advise me or guide me in the right direction. I have just resently had the pleasure of having some spare cash. I'm asking do I spend it on an MSX2 machine or do I just up grade my present system ie (second drive, software, new printer what ever). I suppose the real question that I'm asking is is MSX2 ever likely to eventuate in AUSTRALIA.

P.G.

Dear P.G.,

Unfortunately I don't have the problem of spare money, but we like you are still waiting for news of MSX2 in Australia, so if you could hang on a bit longer we will keep you informed of it's progress hopefully by the next issue.

We recieved this letter from Ross Moore of Maleny, Queensland.

Thank you Forum, for the hint on logging-in disks. The number of allocation tables I corrupted by saving files, and even erasing files, on an un-logged disk! (not to mention using the "COPY" command). Do we assume the same thing applies to OPENing a file for output, and renaming a file?

Has anyone come up with...

A. SV basic modified to run double-sided (not just switchable s/s),
B. A system patch to by-pass the Logo on disk boot-up,
C. A way to load and use Disk Basic after booting in Cassette Basic, without resetting the machine? (I'm a hacker at heart, but short on expertise!)

Lastly, I haven't seen anything on CP/M in the Forum yet. Being pretty much a rookie in that area, I wonder if anyone would share their knowledge of the subject, eg. use of ED.COM, DDT.COM, SWEEP.COM etc.

Ross, Brod was pleased to be of help in providing you with the hint on logging-in disks.
Now, lets start at the easy part first...

CP/M. We now have a colomn on this and I hope it will be of help to you. If you, or any of our readers, have any questions, don't hesitate in dropping us a line. We will try to answer them. If we are not able to, then I'm sure someone out there can.

SV Disk Basic. There was an add in V2N1 of Computer Forum by T.J. Software, P.O. Box 164, Donnybrook, W.A. 6239 Telephone (097) 31-1095. They have Double Sided Disk Basic at $15.00. I do not know if this is what you are looking for, but it is the only D/S Disk Basic that I know of. If anyone can supply, or knows where to obtain D/S Disk Basic, please let us know and we will forward the information onto Ross.

A System Patch. If anyone out there knows of such a patch, or knows why it can't be done, please write and then we can put everyone in the picture.

Booting In Disk Basic. We are putting this question to our resident "Hacker", Rob, and hope to have an answer in the next issue.

Bye till then....

MAX

The following letter was sent in by John Knight of Vic.

Dear Ross,

Welcome to Computer Forum. I was somewhat impressed by the larger issue even if it was a bit late. I just hope that more people will make an effort to supply articles this time. It appears that there are only a few regular contributors although it is possible that some people cannot find the time and think that they have nothing to say because they are "ONLY" game players. With a bit of luck the High Score list may do better this time and the Adventure players may contribute something.

Anyway, my contributions this time are:

A question to anyone. I notice that there are a number of other languages available eg; FORTH, PASCAL, C+ and of course ASSEMBLY LANGUAGE. Can someone supply a comparison of the features, disadvantages, uses or non-uses of these languages etc?

An enhancement to a screen dump program that appeared in an earlier issue of COMPUTER FORUM. The old version only allowed a small size graphic screen dump to occur. My contribution also contains this size, but it works quite a bit faster and it also has two 2x2 (4X) magnification versions, one in bold, the other, faint.

Some other ways of speeding up programs as supplied in the last BASIC TUTORIAL (Vol 2 No 1).

A. Don't put the variable name on NEXT statements.

B. Direct access of the Video Display Processor (VDP) especially as reguards redefining characters for special effects.

C. To speed up the humble BUBBLE sort, try pre-sorting by looking ahead a larger number of moves than one a head. Using this method, I have cut down a Bubble sort for 300 items from around 30 minutes to 2 minutes. Go three or four times through all the data seaching about 50 in front, then do similar for about 20 in front and 10 in front. Finally, do the normal single look ahead but break out of the sort when no entries are swapped in one complete pass. I will try to do an article on this for a later issue. At the moment, I am having trouble making the sort automatic so that it will take the best course of action depending on the number of entries to be sorted.

I am sure that I speak for many people when I say a big THANK-YOU to Brod Brown for all his efforts over the past year. I wish you well, Brod.

Let us all hope that you, Ross, and your team, are as patient. I wish you well on your endeavours also.

John Knight

Thank you John for your contributions and we also echo your thanks to Brod, but don't write him off, he MAY return in the form of a column.

The screen dump you refer to appeared in Vol.1 No.4 by Rod Johnson and was in reply to Mr Harry Tarasinski's letter in Voll No2 reguarding a screen dump for a graphics tablet. The program is for Epson compatible printers.

With reguards to the various "LANGUAGES" available. I, too, would like to hear from anyone who can "supply a comparison of the features etc". The only one that I have had anything to do with is the Assembly Language and I am only just begining. I'll pass on that and leave it to someone that knows what they are talking about. eg Rob Brinkworth

Dear Sir,

I would like to submit the following ideas for articles and/or regular columns in the magazine.

1. A section dealing with CPM
2. An article ,or possibly a project, reguarding the RS 232 interface.
   eg. Setting up for a modem.

I also have a query about the DSKF command which appeared in the basic tutorial section part 8, page 15. This command, for finding out how much space is left on the disk, does not work on my computer (328).

yours sincerely,
Ray Higgott

Thanks for your ideas, Ray. As you may have noticed in V2N1, we have started a column on CPM.

As to an article on the RS 232 interface, we will keep it in mind for the future. If anyone out there would like to write an article, on the RS 232, or anything that you think others may be interested in, please do so. We, at Computer Forum, are only to pleased to have you contributing in any way, shape or form.

Now to your problem with the DSKF command. I have checked it out on my SVI 328 and have found that, if you enter the command like this...

```
PRINT DSKF(0)
```

you get a "BAD DRIVE NUMBER" error message displayed, but if you state the disk drive number it works OK.
So for the SVI 328, it should look like this..

```
PRINT DSKF(1)
```

or this..

```
? DSKF(2)
```

I hope this helps you with your problem, and anyone else that has the same trouble. If not, let me know, and under what conditions it happens.

Bye for now,
MAX

****** FOR SALE *** FOR SALE *** FOR SALE *** FOR SALE *** FOR SALE ******

I am upgrading to MSX2 and the following hardware is for sale.

738 MSX EXPRESS, 80 COL., BUILT IN 3.5" DISK DRIVE MANUALS, CABLES, 10 DISKS CRAMMED WITH SOFTWARE	$650.00
MSX DATA CASSETTE RECORDER	$ 45.00
MSX SANYO LIGHT PEN	$ 85.00
MSX GRAPHICS DUMP COMPATIBLE THERMAL PRINTER WITH CABLES.	$250.00
MSX SONY PRINTER PLOTTER	$150.00
COMMERCIAL MSX GAMES (20 CASSETTES)	$100.00
	$1,280.00

N.B. CAN SELL INDIVIDUALLY AS PER LISTED ITEMS

CONTACT : ROSS BRISBANE 29 BARRAMAY STREET
MANLY WEST QUEENSLAND 4179

PHONE : (07) 396 5283

SV318 & 328 LISTING

```
USE CURSOR KEYS AND SPACE BAR
TO COLOUR OR BLANK DEPENDING
ON PREVIOUS COLOUR.  AS YOU
DESIGN YOUR SPRITE AN IMAGE
OF IT IS DISPLAYED IN THE
BOTTOM RIGHT CORNER.  WHEN
YOU HAVE FINISHED DESIGNING
THE SPRITE, PRESS (ESC) AND
RELEVANT DATA WILL APPEAR IN
BINARY AND DECIMAL

MSX2 MSX2 MSX2 MSX2 MSX2 MSX2

We have been giving serious thought to buying an MSX2 machine for Computer Forum magazine, so we decided if anyone else would like to purchase or inquire about an MSX2 machine, please send us a letter and include your phone number.

We will find out how much of a discount we can get through a good dealer of MSX machines, and perhaps we can make it worthwhile for all involved.

TEMPORARY ASSIGNMENT OF COPYRIGHT

I.....

of.....
(hereafter called the author), hereby declare that the program/s listed below (hereafter called the software) is/are my own original copyright production and indemnify COMPUTER FORUM of 24 East Churchill Ave,Spearwood,Western Australia against any claims for copyright infringement.

I hereby temporarily assign copyright of software to COMPUTER FORUM for the purposes of advertising it through the magazine, FOR SALE column and if requested by readers, supply a copy of the program on tape or disk.
This temporary assignment period is for 12 months only, starting from the date below.

In return for such copyright assignment, COMPUTER FORUM shall pay the amount/s listed on this page, minus handling fees of $4.00 or 25% of the selling price.

COMPUTER FORUM will advise the author if any changes are to accure during the period of this agreement.
