EDITORIAL

---- MUSIC COMPETITION ----

We are really flying along with our Graphics & Music competition, we now have 3 entries, so please be patient when the competition closes on the 31st of May, it could take us a while to go through all of the entries.

---- SOFTWARE SWAPPING ----

At least we have some good news on this idea, we have at the moment 77 titles and 8 people who are interested in swapping their software. I will leave this idea open for another issue and see what happens, if after that time I receive no more lists then I will close the swap idea and type up the list of software to go to each person who sent their list in. That list format again--

COMP -	NAME	COST	MODE
SVI328	GOLF	$14.95	TAPE
MSX	ZAP	$14.95	DISK
SVI318	BOMBER	$29.95	TAPE
MSX	HUNT	$11.95	TAPE

Also please let us have your machine make and memory, plus phone number.

---- F.D.S. Software ----

The FDS software packs that we sell through our magazine are no longer run by FDS, they are still available, but the name FDS no longer exists.

---- PO BOX ----

As FDS no longer exists, please send all mail to PO box 87 Mt HAWTHORN 6016. This is importent because all mail that goes there now will go to the dead letter office.

C O V E R W I N N E R

This issues cover winner is -

-- Jared Hyland of New Zealand --

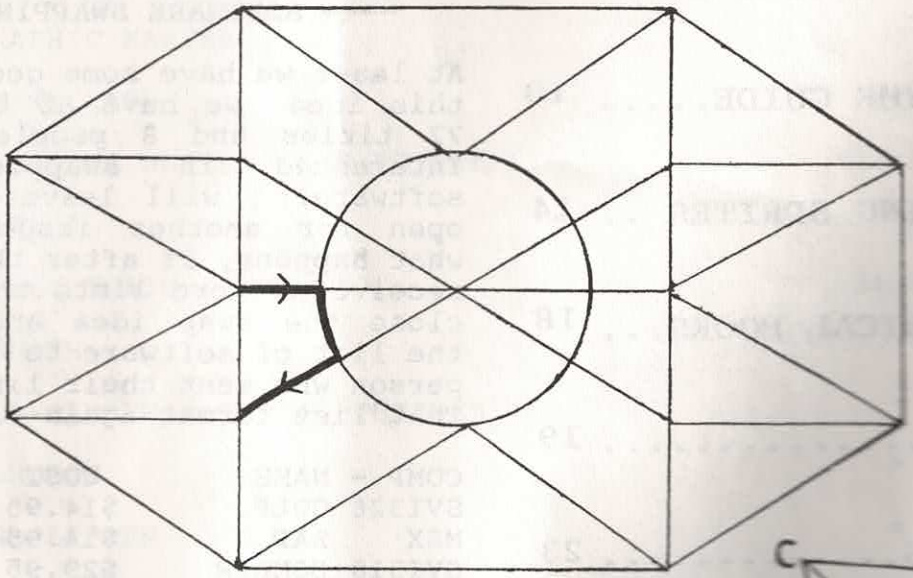

Another excellant effort from Jared, keep up the good work.

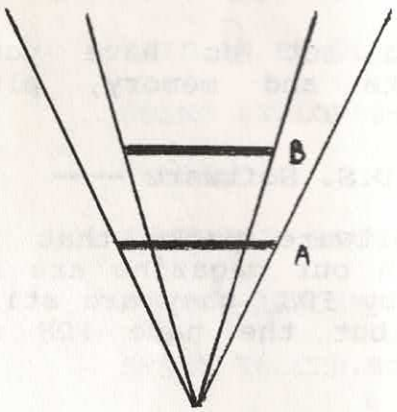

PUZZLE CORNER

T E A S E R S

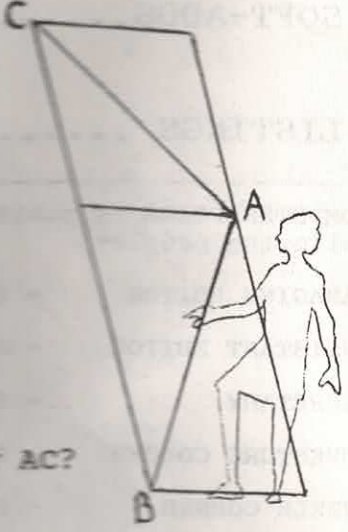

This issue I have decided to throw a few mind teasers together, for your enjoyment!! The UNIGRAM below works like this: 'Simply' try to trace or draw this diagram so that you dont cross your path or touch a line already drawn. I have started this one for you (dark line). It must be one continuos line! TIME LIMIT OF 20 Mins.
(Last issues crossword is below)

U N I G R A M

Which is longer A or B?

Which is longer AB or AC?

D	E	M	O	N	A	T	T	A	C	K		
E		O						T				
A		U		P	A	I	N	T	E	R		
T	E	N	N	I	S			A				
H		T	A	N	K			C	A	R	T	
C		A		B		S		K	D		R	
I		I		A	N	T	I		V		A	
T	E	N		L		U			E	L	F

A GLOSSARY OF TERMS

Compiled by JOHN KNIGHT

APPLE ---------- One of the few things not devoured by IBM.
ASSEMBLER/DISASSEMBLER - A machanic.
BASIC ---------- Simple. easy as pie.
BATCH ---------- A derogatory swear word.
BOOT ---------- Usually worn with a macintosh.
BUFFER ---------- Slang term for a shoe shiner.

CORE ---------- The unuseable part of an APPLE.
CPU ---------- One of the minor droids of Star Wars.
CURSOR ---------- An uncouth lout who uses foul laguage.
DISK ---------- A phonographic record.

FILE ---------- An abrasive tool to smooth things.
FLOPPIES ---------- Most human females have a pair of these (mind you, so do some obese males).
FLOWCHART --------- A plumbing diagram.
FORTH ---------- One after third.

HACKER ---------- A butcher of an operator or a follower of "Yes, Minister".
IBM ---------- Immense Blue Monster. Large blue creature which grows as it sucks life from others.

MACHINE LANGUAGE -- Whirr, click, flash.
MACINTOSH --------- Something you use when its raining.
MEMORY ---------- What stops you from forgetting.
MONITOR ---------- A large lizard.
MSX ---------- A sophisticated missile which never took off due to bad publicity.

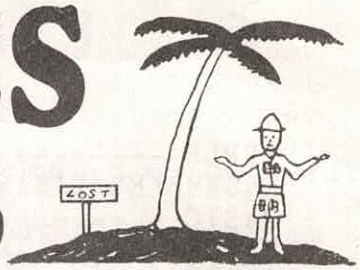

OPERATOR ---------- A surgeon.
PASCAL ---------- A confectionery manufacturer.
PC ---------- A member of the constabulary.
PRINTER ---------- A counterfeiter.
PROGRAMMER -------- A person who dreams up what crap we are going to watch on TV.

RAM ---------- A male sheep.
ROM ---------- Read Only Memory. a common disease among technical type people, a bookworm.
RECORD ---------- A collection of offences against a criminal usually held by PCs.

SPECTRAVIDEO ------ A ghost movie.
SYSTEM ---------- What you flush with when you leave the dunny.
USER ---------- A selfish person.
UTILITY ---------- Electric Gas or Water services.

VARIABLE ---------- A weather forecast.
VDU ---------- A clinic for user's.
VIATEL ---------- You tell someone via someone telling you.
WORD PROCESSOR ---- A blender that eats dictionarys.
WRITE PROTECTED --- Greasy toilet walls.

ADVENTURES ANONYMOUS

WITH YOUR GUIDE ALAN CRAWFORD

This month is the conclusion of THE CASE OF THE MAD MUMMY. But first some information on a brand new adventure which may soon be available through this magazine as a world exclusive.

Its a graphic adventure called THE MYSTERY OF LETHE CASTLE. The reason its not available yet, is because I have only just finished writing it. But by the time you read this the game will be in the hands of a couple of friends of mine who will be giving it a test drive to iron out any unforseen problems or errors which may be in the program. But after weeks of writing and hours and hours of debugging I dont expect to many problems.

When I finally decided to write this adventure, I needed to work out exactly what I was going to do and to come up with problems that had not been explored before. This was almost impossible as I soon found out. But with an undying vigor, huge amounts of coffee and an electric bill that I am dreading, I set about the task in hand. As so many adventure games have already been written, coming up with new problems was the problem. But eventually with a few new ideas and some reworked old ones, it was time to start writing. I started off with these prearranged problems. But as I got further into the game some of these fell by the wayside and new ones just fell into place. The most important thing that I kept in the back of my mind was LOGIC. It must be logical and kept within the realms of possibility and acceptability. Besides, as the writer of an adventure column my credibility was at stake, if I decided the game was good enough to market.

My target throughout the whole exercise was to write an adventure which would stand up against adventures that are already on the market. But I must make one thing very clear, the game was never going to be as big as the adventures from people like LEVEL NINE, because mine was going to be in basic not machine code. But I did want it to be as good if not better than games like BASTOW MANOR, KING SOLOMONS MINES and THE MAD MUMMY, which are all written in basic. The aim was to make it at least as good, then improve the things that I did'nt like in the other games.

This being my first attempt at writing an adventure did present a lot of problems setting the program up and then later on when the available memory I had left in my computer was becoming smaller and smaller.

I had to leave a lot of object discriptions out, so the game would run from disk, making it easier and quicker to save and load the game and later on put them all back in for the final version which would be on tape. There were two things that I did to get a little extra memory space, first off which was to press the control key (on power up), that gives you about an extra 1100 bytes. The other which I did'nt know about until ROSS (our hardworking editor) pointed out, is to set the maxfiles to zero. I could'nt in fact do exactly that because I had to have two files open. One for printing the characters on the graph screen and the other for the loading and saving of saved games. But what I could do once the saved game routine is operating as it should, was to reset the maxfiles to 1 and gain a few more bytes. This means the saved game will not work until the program is finished and the maxfiles reset to 2.

Well, after weeks of toil and head scratching it is finally finished. Except for any bugs that might crop up while its being fully tested by my friends. As a first adventure I am more than pleased, but I can still see where there is room for improvement if I decide to write more adventures. An extra 2000-3000 bytes would have made a big difference also.

If the game is released I may be able to organize some sort of competition (if anyones interested) to coincide with the launch of the game. I'll keep you informed on that. By next month I should Know more one way or the other. But be warned, it will not be an easy adventure to complete.

So now onto THE CASE OF THE MAD MUMMY. When we left off last month we had just saved the game half way up the chimney, so after a shower and a shave we set off in a westerly direction from inside the chimney to a flight of stairs leading down. Here we find more cobwebs and some pretty deadly snakes. This is were the tin that you found in the basement comes in handy, because its full of petrol. That along with the matches should solve the problem of the snakes.

The exit south will take you to the room of columns and before you ask, the answer is no, the articles in this magazine were not written there. Instead you will find a door with a slot in it. You must insert the ANKH and then twist it to open the door. Go east to the stairs leading up and then south to the wooden dock, where you will find a rowboat. Go rowboat and then row rowboat to the underground river. Here there is a grill and a fish. Get the fish and head back, the grill is of no importance.

You will need to take the fish all the way back to the temple like room and drop it as you did before with the book, ankh, ring and birdcage. Then come all the way back to the stairs leading up and go east to the ancient door. Look door and read writing and then say the magic word (if you can work it out) its very obscure, but starts with ANU. Then you just go door to complete the game.

Thats all for this month and don't forget if you are having any problems with an adventure, just drop me a line and I will do my best to get you the information you need. If you have solved an adventure why not let your fellow readers in on it.

Till next time.
bye for now, ALAN.

MSX BASIC TUTORIAL

```

THE END

I have had no requests or even inquiries as to what sort of a program you would like to see in the BASIC Tutorial so I will stick to what ever I decide on.

In this issue I have made a game of Roulette, no graphics that comes later, you must pick evens, odds or a number, also you will notice there are letters before each line number. These are used for the checksum program, I will tell you a bit about the checksum program.

Each month we will give you listings with these alphabetic characters beside the line numbers, first off you must enter the checksum program into the computer and make sure it is correct then save it. Each time you want to type in one of our listings load in the checksum program first and run it.

From there it will check each line you enter of the listing and if you type in something wrong it will not except the line until you fix it.

Now to get back to my Tutorial.

The program is to big to break down every single line and tell you what it does, so, I will break down the ones that I think you should know about.

LINE 40

```
IF N>4 THEN RUN
```

There are certain symbols that you should know about they are -

```
> Means GREATER THAN
<   "     LESS THAN
<>  "     NOT EQUAL TO
=   "     EQUALS
>=  "     GREATER THAN OR EQUAL TO
<=  "     LESS THAN OR EQUAL TO
```

So line 40 says if N (No of people)> (Greater than) 4 then reRun the program.

LINE 60

This line sets up the loop for the number of players

LINE 90

Sets up the amount for each player.

LINE 140

Prints up the amount of money for each player.

```
PRINT USING "$$###.##";A(Z)
```

The PRINT USING statement has a lot of functions and I will try to explain 5 of the main ones you would use.

1. PRINT USING "!" 2. PRINT USING "&" 3. PRINT USING "#"

4. PRINT USING "$$" 5. PRINT USING ","

The exclamation mark (!) will only let the first character of a string be printed, for example -

```
10 A$="ROSS":B$="HAMILTON"
20 PRINT USING "!";A$;".";B$
```

Will print - R.H

The AND (&) symbol will print whatever is specified in a string. For example -

```
10 A$="TEST"
20 PRINT USING "THIS IS A & OF THIS SYMBOL"
```

Will print - THIS IS A TEST OF THIS SYMBOL

The HASH # symbol is probably the one you would use the most. For example -

```
10 A=5.2
20 PRINT USING "##.##";A
30 PRINT USING "#.###";A
```

Will print - 5.20
5.200

The DOLLAR signs ($$) are used in conjunction with the HASH (#) symbols for example -

```
10 A=5.2
20 PRINT USING "$$###.##";A
```

Will print - $5.20

The comma (,) is used with HASH and $$ to seperate 1000's For example -

```
10 A=23562
20 PRINT USING "$$###,###.##";A
```

Will print - $23,562.00

Explore the PRINT USING statement and see what you can do.

LINE 150
Sets up a loop and prints the line -------

LINE 160
This line prints he players name and asks him for his bet.

LINE 210
This line checks to see if a number is pressed between 1 and 3. If the Number is (less then)<1 or the number (greater than)>3 then goto 110

LINE 230
This line asks you how much you wish to bet. If you bet C(J) is (greater)> then the money you have A(J) then print a blank spot over your bet and ask you for an amount again.

LINE 300
This line actually picks a RaNDom number between

This line actually picks a RaNDom number between 1 and 34 and stores it in X this is the winning No.

LINE 310 to 340

Line 310 picks a RaNDom number and sores it in G. Line 320 starts up a counter NS (Number of Spins), If NS=60 (60 random numbers)then NS=0 (set it back to zero) let G=X, if NS doesn't =60 do line 330, which prints up G the random number and then goes onto line 340 which asks if G=X then 360 else go back and get another random number at 310 and add 1 more to the loop at 320 until NS=60.

LINE 370

Starts a loop to the number of players (N).

LINE 380

If D(bet type in line 210) (N) (number of player)=1 then GOSUB 520 (win or lose routine for a number)

LINE 460

Prints up the amount of money that the players have.

LINE 480

This line asks if you wish to play again. It uses the command R$=INPUT$(1) This then checks to see what key is pressed and if it matches the value of R$ on line 500 then it does that command, in our case replays the game.

I shall expand a bit on INPUT$, it can be used to hold a word if you wish for example-

```
10 CLS
20 ?"Guess the password"
30 P$=INPUT$(5)
40 IF P$="WATER" THEN 80
50 CLS:?" I'M SORRY THATS NOT IT"
60 FOR X=1 TO 100:NEXT X
70 GOTO 10
80 ?"THAT IS CORRECT"
90 END
```

LINE 520

This line asks if B(J) (the number chosen in line 250 is the same as) = X ,if it is GOTO 560

LINE 540

A(J) (amount player has)=A(J)-C(J) (amount of bet)

All the lines between 520 & 760 do the same, they all check to se if the correct number has been picked and if so give the payout.

Next issue we will work with STRING functions, and remember if you have any queries or requests send them in.

```
"""""""""""""""""""""""""""""""""""""""""""""""""""""""""""""""""
"   THE  KNIGHT  TYME  PLAYERS  GUIDE...   "
"            BY   CRAIG  HURSEY            "
"                                           "
"""""""""""""""""""""""""""""""""""""""""""""""""""""""""""""""""
```

These tips will help you solve KNIGHT TYME and reach the full hundred percent (100%).There is a lot of work involved to reach this target. And I don't mean a five minute job either. You will need about half an hour to complete it. This game can be purchased from L.P.G in Tasmania for $14.95 there address is in a back issue of COMPUTER FORUM. Now lets get started as it will take a while to complete..

First thing to do is to UNWEAR the cloak of invisiblity and DROP it in a safe place.Now DROP gadget X as you wont be needing it. Next go to the transporter room and COMMAND DARBY IV to help- he will then drop an ID card which you should pick up. You will now have to make the ID card valid before you can control all the characters and the Space Ship.

Go to the bridge and TAKE the McTablets of Sara , which will boost your strength. Then TAKE the instant film from Gordon and goto the Recreation Room. There you PICK UP the camera on the table. Next find S3N3, give it the camera and the instant film and COMMAND it to HELP. It will then take your photograph. Now TAKE the photograph, then the glue from it; if you do it in this manor you will get a message saying that the photo has stuck to the ID card which you can now WEAR. You will find that all the characters will now pay attention to you.

Now the next task is to get the starship to move. To do this you will need the star-map. First find Sharon and TAKE the advert and drop it at the location where you find the star-map and pewter tankard. You will now find that you can jump on the advert and reach the map and pewter tankard. PICK UP the map, the tankard and the advert and go to the BRIDGE. GIVE the star-map to Gordon and you will find that the ship can now be moved.

You should now fix the transporter. Go to Starbase 1 via eden or Polaris the GIVE Gordon the Pewter Tankard an COMMAND him to help he will re-route the transporter for you. Then communicate for help from Starbase 1 and explore there. Goto the Transporter Room and use the co-ordinates given to you, You should only take the ADVERT, McTABLETS and the GLUE with you and leave all the other gear which you are carring on the Starship.

When you arrive on Starbase 1 find Hector and give him the Glue as you will not be needing it. Now go searching for a pair of boots, you will have to use the Advert to reach them the same way as you did to reach the Starmap and Tankard. Now WEAR the Boots and PICK UP the ADVERT and find the bag of POTATOES and PICK UP them as you will need them to get the pieces of the SUNDIAL OF ALPHA, which are with Murphy and Hooper you can find Murphy on the planet RETREAT and Hooper on the planet Monopole. Use the map to move your star ship to these planets.

THE KNIGHT TYME PLAYERS GUIDE (CONTINUED)...

There are three pieces to the Sundial of Alpha which need to be collected. You will find two pieces on Monopole, one with Hooper the other in the second room (from the transporter). To get to these you must travel to Monopole useing the Starship, use the planet map to plot your course to Monopole. Before you transport yourself down wear your protective gear (see list below) as these will stop you from being shot or dieing of poisonous gases and being heard as these let you get past any defences. Use the co-ordinates given below the map, when transporting your self onto the planet. After you have PICKED UP the piece in the second room and TAKEN the second of Hooper. Now DROP the two pieces of Sundial. Now WEAR all protective gear and use the transporter and beam down to RETREAT, use the co-ordinates on the planet map. Once you are there start walking until you come to a barrier. If your magic level is above 60 CAST a spell to remove barrier, now GIVE the bag of potatoes to Murphy if you can see him if not walk a bit more. Now TAKE the piece of Sundial of Murphy and return to the transporter and use the co-ordinates for the Starship.

Now DROP the third piece with the others and cast a LIGHTNING BOLT spell if your magic level is about 70. Now travel to outpost. Once you are there wear the GOLDEN SUNDIAL OF ALPHA if you have room if not PICK it UP and CARRY it. The sundial is fully formed if you cast the lightning bolt. Now goto the Transporter and use the co-ordinates given for OUTPOST. Make sure you have your protection gear on and go for a walk until you reach TYME GARDIANS don't pay any attention to any warnings as you are safe. Once you have reached them you will be told that a TYME machine has been placed a board your Starship now return back to the Transporter and transport back to the ship.

Now use the planet map and travel to GANGROLE the black hole. Now unwear every thing apart from your GOLDEN SUNDIAL OF ALPHA and the shield. Now walk to the AIRLOCK and then into a new room (control system room) here you will find the TYME MACHINE now cast a spell LIGHTNING BOLT as this will give the TYME MACHINE enough energy to reach earth at your time. Now the final step if done correctly you will have completed KNIGHT TYME and scored 100%. Here it is LUANCH the TYME MACHINE.

****
**** SPECIAL NOTES ABOUT ****
******** KNIGHT TYME ********
****

1) YOU CAN ONLY CARRY FIVE THINGS AND ALSO ONLY WEAR FIVE THINGS.

2) WHEN ABOARD YOUR STARSHIP TAKE OFF (UNWEAR) YOUR GAS MASK AND CLOAK OF INVISIBILITY.

3) WHEN TRAVELLING TAKE THE SHORTEST ROUTE AND USE TYME DESTORT 1 AS THIS SAVES FUEL AND HELPS WHEN SOME PLANETS HAVE NO FUEL

4) WHEN POSSIBLE COMMUNICATE AND REFUEL STARSHIP.

5) ALL WAYS CHECK TRANSPORTER CO-ORDINATES BEFORE YOU EXECUTE THE COMMAND.

PROTECTION GEAR LIST

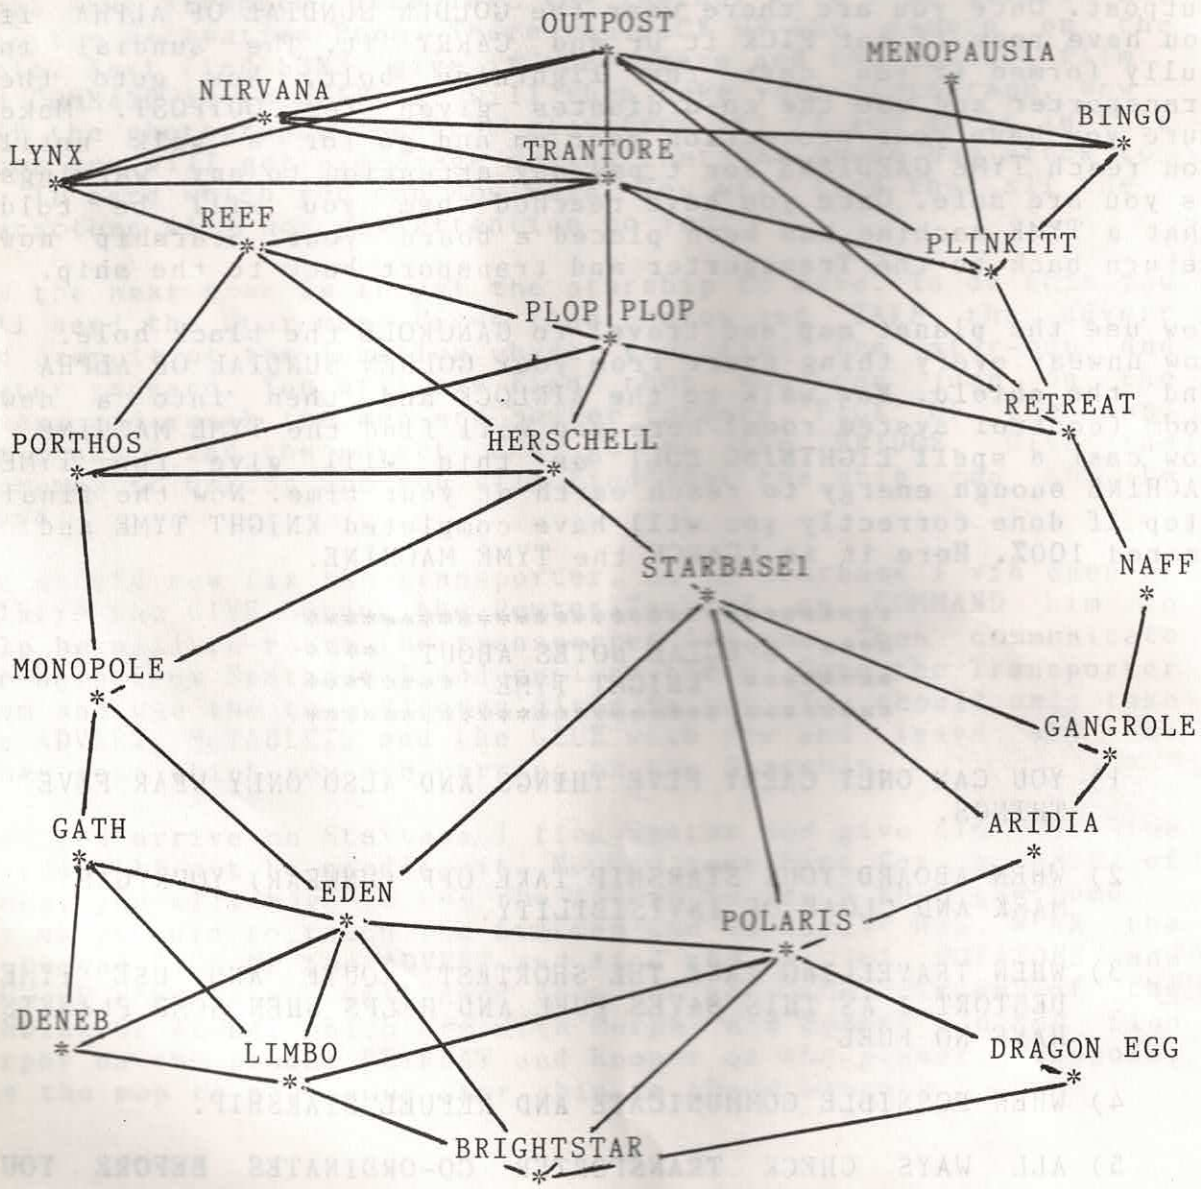

SHEILD ---------- You should wear this all the time
GAS MASK ---------- Get off Sharon aboard your starship
CLOAK OF INVISIBILITY- Which you're carring or placed it in a safe place.
BOOTS ---------- You would have collected from Starbase 1(wear it all the time)
ID CARD ---------- Wear aboard the Starship.

TRANSPORTER CODES:

SHIPS CO-ORDINATES	- X0Y0Z0
STARBASE 1	- X1Y2Z3
RETREAT	- X8Y4Z1
MONOPOLE	- X1Y8Z4
OUTPOST	- X8Y9Z6

Use the map to plot your way around the planets:
The main planets are as follows; STAREBASE1,MONOPOLE,RETREAT and OUTPOST.

Turka Finland

If any of the above groups wish to enter their meeting times & place or phone number, drop us a line and we will include them in this page.

PROGRAMMING WITH SPRITES - Part 2

by **Lucille Parker**

SPRITE MOVEMENT

One of the advantages of working with sprites is that once you have set them in motion, they will automatically move off the edge of the screen and come in again from the opposite side. The following program shows how to get your sprite moving.

```
10 SCREEN1,1:REM SCREEN2,1 FOR M.S.X.
20 SPRITE$(1)="0xx0"
30 X=1:Y=100:
40 PUT SPRITE1,(X,Y),15,1
50 X=X+1
60 GOTO 40
```

Of course if you don't wont to keep lapping around the screen, you could add a test for the edge like this:

```
45 IF X>251 THEN X=251
```

Alternatively, the STEP command can be used to move sprites by using the following format:

```
40 PUTSPRITE1,(1,100),15,1
50 PUTSPRITE1,STEP(1,0),15,1
60 GOTO 50
```

Moving a sprite in 8 directions under joystick control may be achieved by using 8 IF....THEN statements, one for each direction. See your User's Manual. To include all joystick options in your program , simply type:

```
J=STICK(0)+STICK(1)+STICK(2)
```

You will be able to move sprites much faster and smoother with the techniques used in the following program.

```
10 DEFINTA-Z: SCREEN1,1:REM SCREEN2,1 FOR M.S.X.
20 FOR T=1 TO 3:READ C$
30 D$=D$+CHR$(VAL("&b"+C$)):NEXT T
40 FOR T=1 TO 8:READ A(T),B(T):NEXT
50 SPRITE$(1)=D$:SPRITE$(2)=D$
60 E=60:F=96:G=180:H=96
70 ON SPRITE GOSUB 180
80 SPRITE ON
90 PUT SPRITE 1,(E,F),10,1
100 PUT SPRITE 2,(G,H),1,2
110 J=STICK(0):IF J THEN E=E+A(J):F=F+B(J)
120 K=STICK(1):IF K THEN G=G+A(K):H=H+B(K)
130 GOTO 80
140 DATA 000110000
150 DATA 001111100
160 DATA 000110000
170 DATA 0,-2,2,-2,2,0,2,2,0,2,-2,2,-2,0,-2,-2
180 SPRITE OFF:SCREEN 2:LOCATE 90,80:PRINT"BOOM":FOR T=1 TO 500:
NEXT:SCREEN1,1:GOTO 50
```

DEFINT A-Z in line 10 defines all variables as integers and speeds up the computer's calculations. If your program requires a CLEAR statement, it must come before your DEFINT statement.

Line 40 reads the data at line 170, which is the eight pairs of directions for the sprites, and places the data in arrays A(T) and B(T).

Lines 110 and 120 check to see if the joysticks have been used, and increment the X and Y co-ordinates according to which direction the joystick was moved.

Sprite collisions are detected by the ON SPRITE GOSUB command. This command needs to be activated by SPRITE ON, which should be within your main loop.

The program jumps to line 180 when a collision occurs. It is wise to include a SPRITE OFF statement in this subroutine to prevent the collision registering more than once. The reason for looping back to line 50 is that when the program changed screens the computer forgot about its sprite information, but it stil remembered what was stored in D$.

Now to the subject of STRIG, which refers to the spacebar [STRIG(0)] or the trigger buttons on the plug in joysticks [STRIG(1)] and [STRIG(2)].

The commands to use are ON STRIG GOSUB [line number] and STRIG( ) ON and STRIG( ) OFF.

The ON STRIG GOSUB command expects up to 3 line numbers to be specified, the first one referring to the space bar and the second and third ones for the joystick buttons. If you want your program to work on joystick 1 only, type:
ON STRIG GOSUB, line number (note the comma) and STRIG(1) ON.

For joystick 2only, type:
ON STRIG GOSUB,, line number (two commas) and STRIG(2) ON.

To set up the three strig opitions, you must repeat the line number three times separated by commas. (see line 150 of my Shooting Gallery program which follows).

An alternative use of STRIG is to type:
IF STRIG(0) <> 0 THEN GOSUB.....

An interrup command is always faster than an IF .. THEN statement.

People don't like to see a program freeze while a bullet travels. The "Shooting Gallery" program which follows demonstrates how the action continues when you fire, but the bullet would naturally have been faster if it didn't. See line 270 where the GOSUB 310 allows the ducks to take a step while the bullet is travelling.

```

SPECTRAVIDEO X'PRESS RESET BUTTON.

Courtesy of:- M.S.X. INTERNATIONAL USERS CLUB.

All MSX computers use the Zilog 80 (Z80) as a CPU, to force the CPU to reset we must introduce an earth to pin 26 of the Z80 chip.

A convenient, and simple method of achieving this on the SV 738 X'PRESS is to install a push to make press button to momentarily complete contact between pins 29 (earth) and pin 26 (reset).

On the circuit board there are 2 solder pads to connect your wires (see the diagram), one connects directly to pin 29, the other is situated between pins 23 & 24, this connects to pin 26 on the underside of the circuit board.

The best place to install your button is on the top left in the corner where the ventilation grills meet, there is a round mark on the underside of the casing that looks as if it could have been put there for this purpose.

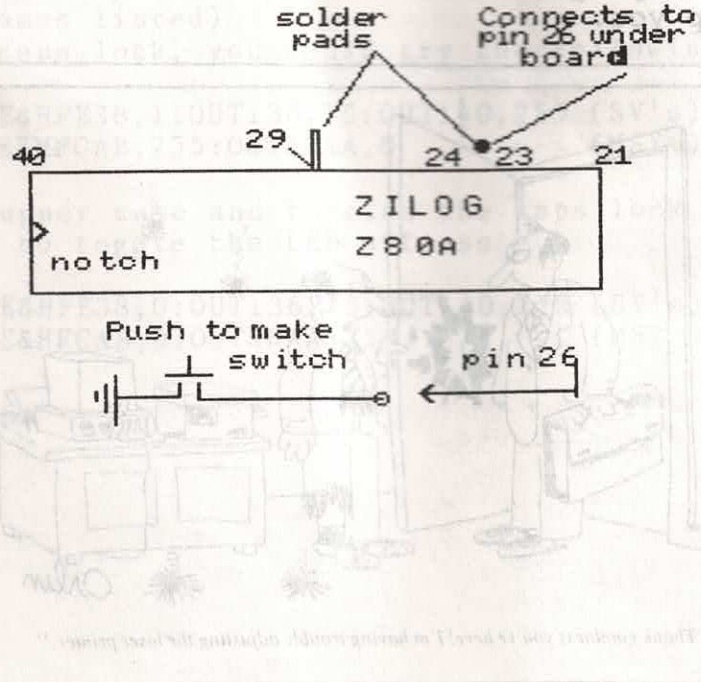

The advantages of a reset button.

1. Eliminates the need to use the ON/OFF switch, reducing the possibility of a burnt-out switch.
2. Allows the user to regain control of the machine without destroying the contents of the memory in the event of a lock up.
3. Generally makes life easier, you will wonder how you managed without one.

We have fitted four up to now, and all work perfectly. This method should operate on all MSX machines, though the sitting of the pins may vary.

Finally, we must **WARN** you that this modification may VOID any guarantee on your machine. If you are not handy with a soldering iron, let someone else who is do it for you, it only takes 15 minutes at most.

(The Z80 chip is IC33 and is located slightly left & down from the centre of the main board. ED)

MSX TECHNICAL BOOKS

ASCII offers several MSX technical publications to assist professional developers of MSX products. These publications include hardware and software specifications, programming techniques and examples.

MSX TECHNICAL DATA BOOK (MSX-TDB)

Describes in detail the original MSX specifications, MSX-BASIC, MSX-DOS, expansion features, international versions.

MSX2 TECHNICAL HANDBOOK (MSX2-TH)

Describes in detail the MSX2 specification, MSX-BASIC 2.0, MSX-DOS, the Video Display Processor V9938, BIOS peripheral access methods.

MSX BIOS LISTING (MSX-BIOS)

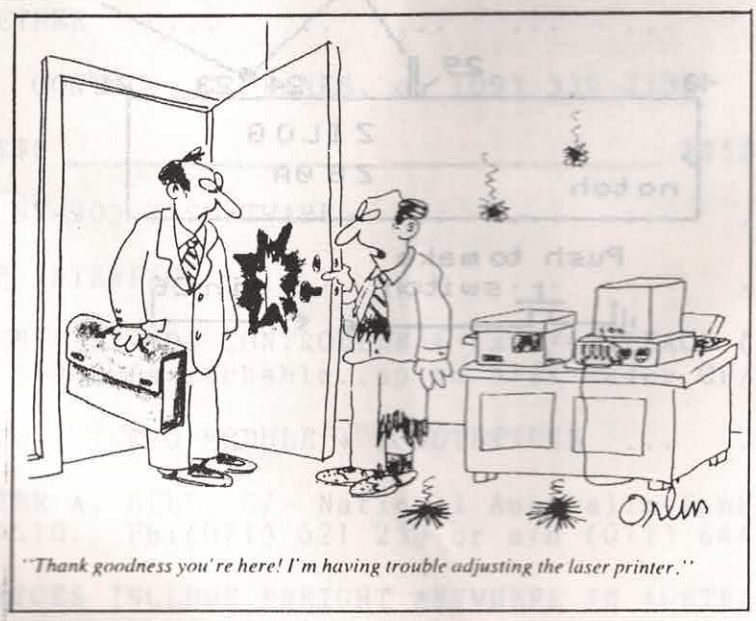

V9938 MSX-VIDEO TECHNICAL DATA BOOK (MSX-VDP)

Describes in detail specifications of the VDP, Basic I/O, Registor functions, Commands, Sprites, Pointing devices, Special functions.

UNIT PRICE (US$)

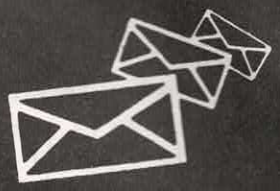

QUANTITY	MSX-TDB	MSX-TH	MSX-BIOS	MSX-VDP
1 - 10	$50.00	$150.00	$200.00	$50.00
11 - 50	$40.00	$100.00	$150.00	$40.00
51 - 100	$30.00	$ 75.00	$100.00	$30.00
OVER 100	$25.00	$ 50.00	$ 75.00	$25.00

As you can see it would be a lot cheaper if more than 50 of us could buy books, so if you are interested please drop us a line with the name or names of the books you require, and for people within Australia please include your phone number so we can ring you if necessary. We will pay for all postage costs through the money we will hopefully save in buying in bulk form.
So help us to help you.

"Thank goodness you're here! I'm having trouble adjusting the laser printer."

MAILBOX

Dear Ross,

First of all, thanks for a beaut magazine. I just hope it will last the distance. If all subscribers send one program or one letter, you would have enough for 5 years. But everybody "INCLUDING ME" waits for the other fellow and then complains when it folds.

Here are a couple of hints for SV's:

```
SET1,"P"          Stops Writing to Disk
SET"1:name of program","P"
SET1," "          CANCEL.

COPY 2 FROM 1   This will Copy the Disk in Drive 1 to 2.
COPY 1 FROM 2   This will Copy the Disk in Drive 2 to 1.
COPY 2 FROM "1:name of program"   Copies one file ONLY.

POKE&HFE38,1    Capital Locks on.
```

Simple hints, but some of us might not know them yet.

This is my first contribution to 'OUR' magazine (not the last), and I hope many others will follow.

Yours in computing,
Hank Zuydam.
Secretary, SUSPECT
[Sydney Spectravideo Users Group]

####^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^######^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^####

Thanks for the tips and high game scores. It seems that you and your mob "PLAY" with your computer alot! (going by the scores and number of games listed)
As part of the caps lock, you could try the following :-

```
POKE&HFE38,1:OUT136,15:OUT140,255 (SV's)
POKE&HFCAB,255:OUT&HAA,0          (MSX )
```

This enforces upper case and toggles the caps lock LED on. For lower case and to toggle the LED off use -

```
POKE&HFE38,0:OUT136,15:OUT140,223 (SV's)
POKE&HFCAB,0:OUT&HAA,255          (MSX )
```

The following letter was sent to the MSX & SVI users group of W.A. and was 'FORWARDED' to us.

Dear Max Cowin,
I have owned an SV-328 computer for some time, and have been able to obtain extra hardware including a disk drive, and collected a number of programs for it, including MSX Basic V1.0 and have added programs and games from the listings in Computer Forum.

Some weeks ago, I received a letter and order form from an MSX users club (I think it was in W.A.), I made out a cheque to the MSX International Users Club, and when returning from a long weekend holiday, one of the cassettes I sent for had arrived. One main cassette I was most interested in was 'Cessna Simulator' (they stated that they could not obtain it at present), the only cassette they sent was 'Ten Pin Bowling', and with the help of my MSX disc I could run the game without any problem.

The other side of the cassette was 'Kuma Golf Simulator'. After the CLOAD & RUN, my screen showed:

3D GOLF SIMULATION COPYRIGHT 1984 BY KUMA

When the cassette player's light went out, the programm should have started. I tried loading the programm again with the CAPS LOCK light on and off, but cannot get the programm to run after loading (although I can with the tenpin bowling). I am STILL using the MSX program.

I have lost the list of other programs and games that the club sent me, along with their address. I was hoping you could help me with their address so that I could send the Cassette back. If you could help me with what can be wrong with the program, I would be very grateful, and if the Cessna Simulator would have the same problem?

I hope to hear from you very soon.

Yours faithfully,
Bernard Waslin

--####----------####----------####----------####----------####--

REPLY

First things first, if you write to a user group and want a reply, then you should include a stamped self-addressed envelope. Most user groups and clubs, although they like to hear from you, can't afford to write back to every one that sends them a letter. Remember, they are a group of users, just like you, and there finances are not unlimited.

Now, the Msx International Users Club is situated in South Australia. Their address is:

MSX INTERNATIONAL USERS CLUB
PO BOX 235 SALISBURY S.A. 5108

The trouble with the games not working is due to the fact that you are using the SV-328 and not an MSX computer. Even though you use the MSX disk, it still does not give you complete compatibility. Most of the Basic programms will work, unless they start to peek and poke. Some of the Machine code programs 'MAY' work, most will not. This is due to them accessing most of the Registers, the VDP and the sound chip directly. The address's for these things are completely different.

The MSX disc will allow you to play some MSX software, BUT, remember, that you are still using the SV-328 and not an MSX computer, so don't expect to be able to use some of the better MSX games/programs.

A query from Jeffrey Dean of Victoria

Can anyone help me find 2 books which were once plugged in this magazine called: SIMPLE INTERFACING PROJECTS by Owen Bishop and THE MAGIC OF SPECTRAVIDEO by Bernard L burke.

...And something for your 'technical staff" to ponder: Can the SV328 cassette ports be configured to act as serial communications ports...driven by a decent M/code program. Even if it was for SV to SV purpose only! How is the cassette serial different to RS232 serial? The mind boggles!

Please let me know what's happening!
Yours digitally, JEFFREY DEAN

REPLY

Unfortunately I can not answer the above questions, perhaps one of our readers may know where to get the books from. As far as the interfacing goes our entire technical staff (MAX) is away for a few weeks, so, unfortunately he can't help you. But when he comes back I will give him your problem.

Here's a problem and request from Phillip Christie of Victoria,

I have been having problems converting cassette based programs to disk particularly ones with the first part of the programme being one that has several calls to cassette Bios calls associated with the cassette interface. I was wondering whether any of your readers or yourselves would have a list of BIOS CALLS or HOOKS to amend the cassette calls to disk routines. I am only a beginner when it comes to writing programmes for use with the disk drive and any help would be appreciated.
Keep up the good work and thanks for supporting MSX and Spectravideo.

Yours faithfully, PHILLIP CHRISTIE (VIC)

REPLY

We do not have a list of BIOS calls for either machine, and if any of our readers have please send them in and we can put it into the magazine for everyone.

Dear Ross,

I am at present trying to compile a list of what MSX utility programs there are available, to be bought in Australia. Below I have listed the programs I know of. I hope you will put this in your magazine so that you reader's can also help me with this project. I have found that some state's have little knowledge of software in other states. As an end result of this little project of mine I hope to get on to a Viatel club and ask for this software which I know can be bought. Also sent with this letter is a menu program for the MDDEM I use. It contains all the BBS in Brisbane of which I am a member. I hope that there is someone out among your reader's who can use this or if

they have something better they send it in. Can anyone help me with a command to send double line feed to the EPSON printer I have. This I usually do by digging behind the printer for the No. 3 DIP SWITCH, which does the job, but at the expense of a lot of messing around.

If anyone wishes to reply to my request, could they either send it to me. D.M.STEWART. 40 BREWERS RD. SARINA. QLD 4737. If a reply is wanted please send a stamp, self-addressed envelope or send it to Computer Forum and they will pass it on.

That's all Ross & Co. KEEP UP THE GOOD WORK.
DAVID STEWART, (In Sunny North QLD)

UTILITY LIST

'THINKMAN' - MODULAR SYSTEM - Contains:- Word-Processor
- Database
- Spreadsheet
- File Manager
- Graphic mode

'HOME OFFICE'- Contains:- Word-processor
- Database
- Cheque Account Manager

'TURBO-PASCAL' - LANGUAGE CART. Not much know about it by myself (can anyone help)

'TASWORD' - BASIC - Word-Processor

'HISOFT GEN ASSEMBLER/EDITOR' - NOTHING KNOWN.

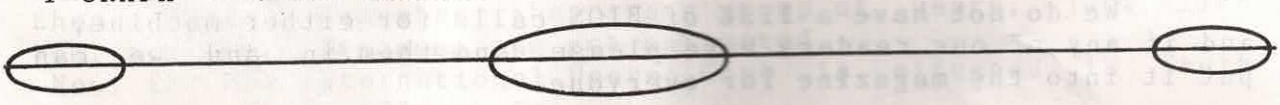

'HISOFT MON DEBUGGER' - NOTHING KNOWN.

'KNIGHTS COMMANDER' - Adds 40 new cammands to BASIC

'KNIGHTS EXPERT MACHINE CODE' - Allows creation & editing of Machine code programs.

'KNIGHTS EASY ASSEMBLER' - MACHINE CODE ASSEMBELR -
- CONTAINS:- 1. Assembler/Editor
- 2. Machine Code Monitor
- 3. Disassembler

'T-GRAPH' - GRAPH DRAWER

BE AWARE

Many of you may be familiar with the computer VIRUS that is afflicting Amiga onwers, plus some I>B>M> compatibles. This for those who haven't heard of it, is a routine that has been placed on disc, probably by some stupid hackers, and it loads itself into any disc that is used on that computer. This disc is then corrupted, and itself then passes this corruption on, if used on the computer. The trouble is it isn't obvious that the disc has been affected because the routine does not reveal itself until a random time has passed. A message then appears on screen" YOUR COMPUTER HAS COME ALIVE". The corruption quickly uses up memory, so all disk users BEWARE, IT COULD HAPPEN TO US, be on your guard.

COURTESY OF MSX INTERNATIONAL

AUF WIEDERSEHEN MONTY

SUPPLIER... GREMLIN GRAPHICS

Here is a game that is going to keep all you platform and ladders freaks busy for hours. This is, I believe, the first Monty game to be released on the M.S.X., and I hope it won't be the last. Monty Mole has escaped from jail, and has to travel across Europe to escape from the law. Before Monty can find freedom though, he has to find enough cash so he can buy the island of MONTOS, where he will be safe from extradition. There are plenty of puzzles to solve, some easy some very hard. There are also plenty of objects to collect, some usefull, some to be avoided. Playabillity is very high, it's a game you keep going back to. The graphics are pretty good, the use of colour is done extremely well, the sound is only fair though. Well done Gremlin Graphics, this game with all it's puzzles will keep us busy for weeks....

REVIEW COURTESY OF MSX INTERNATIONAL
