

MARCH 1986

World of Reviews

Legend

- = origination of products reviewed in this issue

Our February meeting at Claude's place was cancelled due to illness, however we did hold a very small meeting at our place of residence in Vaudreuil. There were a few people who attended. The meeting was very unstructured and interesting. Our next meeting will be held on the 6th of April at 7:30 pm at 3460 Peel St. suite 111.

NEWSLETTER ARTICLES

Members are encouraged to contribute to the Newsletter in the form of articles, mini programs, helpful tips, jokes, cartoons and questions. A short article may be submitted in any form in English or French. We welcome the reprinting of any article appearing in this newsletter providing credit is given to the author and to SMUG of Montreal. Opinions expressed in this newsletter are those of the writers and are not necessarily those of SMUG of Montreal. SMUG of Montreal cannot assume liability for errors in articles, programs or advertisements.

SMUG NEWS

This month's issue of our newsletter will be focused solely on reviewing books and software for the SV & MSX computers. Next month we will return to our normal format and contents.

According to Mr. Gruenberg of Synoda Co. neither SVI/BONDWELL nor any of the MSX companies made an appearance at the CES show in Las Vegas this year.

Claude Zekri and Jean-Guy Fontaine attended the Yamaha Jour X-11 show on the 25th of January. The focus of this show was solely on the musical instruments and the musical aspects of the CX5M.

C. Regena a "COMPUTE" columnist recently sent a nice letter, informing us of the fact that she will not be producing her "MSX TRACT" publication as she had planned, due to the poor sales of MSX in the U.S.A. We would like to thank her for the copy of "Learning Notes", a program of hers that she originally wrote for the TI-99/4A and translated to MSX. She has given us permission to publish it in our newsletter. So we will publish it in a future edition.

Thanks goes out to Mr. Cam Shearer of Yamaha Canada for the copy of the Yamaha Graphic Artist cartridge which he so kindly gave us. We will be reviewing this cartridge for our members as soon as we obtain the book that goes with it.

We would like to thank Ms. Elaine Perry of Virgin Games, an MSX software company in England for providing SMUG of Montreal with a copy of their excellent looking game "SORCERY" for us to review. Believe me! I wish we could review the game because it looks like a very good one. It is a graphic adventure game and it's supposed to have 50 screens. However, we have not been able to load and run the game on the SV-738 nor on the SV-328 (with the aid of the MSX language program). I believe that the built-in disk drive and disk BASIC is what is preventing us from loading the program on the SV-738. If we are able to find a way around this problem so that we can load it, we will definitely review "SORCERY". The MSX language allows us to load 90% of MSX cassette programs on the SV-328, however, every now and then we encounter a program that won't load and SORCERY happens to be one of them.

Mr. Yves Leclerc of "LA PRESSE PLUS" mentioned our group in the January 25th 1986 edition of his column, "Demain L'An 2000". Thanks Mr. Leclerc. We sure wish other North American computer columnists would have

the courage to do the same.

BAS - the SV users group in Norway has recently sent us some interesting public domaine programs written in Norwegian and a couple of their newsletters. By any chance, is there anyone out there who knows Norwegian, and is willing to do some translations?

SMUG of Montreal is sending out catalogues of hardware, software, books and public domaine programs that is available to it's members. This catalogue will be published semi-annually, so hang on to it! This catalogue will only be sent to SMUG of Montreal members. Members should be receiving the catalogue before the end of March and will apply until September. From time to time we will publish in the newsletter lists of any new material available from SMUG of Montreal, but this will not be a complete list of all materials available through SMUG. Any such lists will only be meant as addendums to the catalogue.

SOFT REVIEWS

By: F. Fontaine

PANDA SOFT

SEABATTLE: In this game you are pitted against the computer. You must hide five ships on a grid and the computer will do likewise. Once this is done you must use either the joystick or cursor keys to seek out and destroy the computer's fleet, before it finds and destroys yours.

This is a computer version of a popular board game. It is not an arcade game, but rather a game of strategy and luck.

The instructions are included in the program, so that you won't have to worry about losing a few sheets of paper. It is very easy to learn to use and play.

The music is good and there are good sound effects as well, but the graphics could stand some improvements. Overall though, I did enjoy playing this game and I'm sure many other users will too. Seabattle will soon be available to SVI & MSX users who are SMUG of Montreal members.

NEW DISK: is a convenient BASIC utility program, which allows the user to format and sysgen disks on either drive 1 or drive 2. This is done by first choosing option 1 from the menu and following the instructions shown on the screen. This program physically and logically formats and verifies the disk (both virgin and previously used disks) in one quick operation. Another good thing about this program is that the sysgen is very fast compared to the sysgen program supplied on the SV-DISK BASIC disk.

The copy part of the program copies the entire disk from drive 1 to drive 2 quickly. Thus backing up original disks becomes a breeze.

This is a very good program for basic disk operations, simplifying the whole procedure a great deal, for the user. "New Disk" will soon be available for SMUG of Montreal for the SV-328 and I believe this program will also be available for MSX users, as well.

MICROCOM

NUGGIT: This game is available for 32k MSX computers. It is a very fast action game and requires a joystick to do very good at it. It can be played using the cursor keys, but it is very difficult because the action is very fast and you just can't keep up using only the keys.

SV-738 owners beware! This game has a built-in DEF USR that will cause

the program to abort the loading process if a disk system is detected, rendering the game useless to SV-738 users. I managed to load it to review using the MSX language for the SV-328 and shutting off the expansion box after the language was loaded and before I loaded NUGGIT from the cassette.

You must pick up the gold that is lying around the mine, but avoid the guardian miners at all costs, as they will eliminate you if they catch you. You are able to scan for gold to locate where it is in relation to your location. You may also "hyper-dig" at the cost of 1 life each time you use this option. "Hyper-digging" will give you a "smart diamond" at the bottom of the mine which can be used to "auto pick-up" all the gold in the mine. You must collect all the gold in the mine before you can go to the surface. At which time you'll get a BONUS reward.

There are 5 levels and 25 "sheets" to this game.

This is a very fast action and difficult game to play. It should hold your interest for awhile.

You may order this program from SMUG of Montreal, see catalogue for details.

WAFFLE: is a game with a rather strange theme. The user's playing piece is a wedge of cheese which must remove mold from a waffle, by rubbing over the moldy patch. Meanwhile though, there are "Zappers" which detest cheese and are trying to zap your wedge out of existence.

Once you clear the waffle of the nasty mold you are presented with another moldy waffle to take care of. The game gets more difficult as it progresses. The game ends when all of your cheese wedges have been eliminated by the zappers.

Waffle can be played using either the cursor keys or joystick. It comes on cassette and will run on MSX computers with at least 16k RAM. For details about ordering this program consult the SMUG of Montreal catalogue.

DEMON DISKS: is an arcade game for the SV-318/328 computers, in which you must kill the computer's "Android" by throwing disks at him. Of course the computer's android becomes more and more aggressive and accurate as the game progresses.

The object of the game is to see how many of the computer's androids you are able to eliminate before your 3 initial androids are eliminated.

Demon Disks is played using either the cursor keys and space bar or the joystick. It is available from SMUG of Montreal for \$10.00 plus \$2.00 for postage and handling.

CDL

DISCAT: is an excellent program for anyone with more SV-BASIC disks than he can handle. Have you ever had to load 2 or 3 disks just to find one specific program? If you have then you'll appreciate a program like this.

Discat will keep track of 900 files for you, it will tell you not only what disk the file is on, but whether it is in ASCII, BASIC, BINARY or MACHINE CODE.

Discat will either list the files in alphabetical order or by disk number. Discat also indicates how much free space is left on each disk. It will save your catalogue on disk for future usage and if you wish you may also obtain a print out of your current catalogue.

This program of course requires that you have a disk drive, an 80 column card and for maximum benefit a printer.

Personally I find Discat to be an excellent program and a great aid to

Dear Don,

Thanks for samples of your software. We will be reviewing some of your titles in future editions. I am writing a separate letter to you. Hope you receive it. The Canadians

my functions as public domain program librarian for SMUG of Montreal. I would have a difficult time trying to locate many of SV-BASIC public domain programs without the aid of Discat.

Discat is available for the SV-328 from SMUG of Montreal for \$39.95 plus \$2.00 to cover postage and handling.

BILL MANAGEMENT: This program starts off by asking you for a password, which when entered is not shown on the screen. Thus allowing for confidentiality. If the correct password is not entered you will not be able to continue. So it is important to use a password that you will not forget and yet won't be obvious.

Once you've entered the correct password you are presented with a menu of 13 different options. These options allow you to do many different things like: adding new accounts, viewing account histories, enter new bills, pay bills, view the payment history of cheques, list all accounts, list only those accounts that are still current, list account names, review a month's worth of transactions, delete 1 or more accounts from file, load and save accounts to disk and finally exit from the program.

This is a very flexible program which allows you to take care of one account at a time, by adding the bill, paying right away (if you wish) and checking the history of that particular account. You can also jump around in the program eg: pay all bills to all accounts at once, enter all new outstanding bills, check out month's payment history, etc...

Every option (with the exception of the disk operation options) allows you to get a print out on paper of what is shown on the screen. This feature is very useful, because it allows the user to get a hard copy for his records. This program allows the user to enter up to 20 accounts. The categories of these accounts could be as an example: credit cards - with a different account for each different card, rent, car payments, phone, hydro, insurance, etc... In any case this program will keep track of bills and payments for 20 different accounts and save it to disk.

Personally, I think this is a very good program. It is flexible, simple to understand and user friendly. It requires a disk drive and a printer is optional but necessary to obtain a hard-copy of the records.

Bill Management is available for the SV-328 from SMUG of Montreal for \$39.95 plus \$2.00 to cover postage and handling.

MR. MICRO

HUMPHREY: is a version of the popular "Q-Bert" game. Humphrey is available for both the Spectravideo and MSX computers, however SMUG of Montreal currently stocks only the Spectravideo version. The MSX version may be ordered through SMUG of Montreal (for details see SMUG of Montreal's new catalogue, sent to members separately.)

The user is allowed to start off at any of the 4 levels in the game. Each level corresponds to each of the 4 screens in the game. Of course if you start off at level one you will play the 4 screens from beginning to end, if you are good enough. If you choose to start off at any other level you will play the corresponding screen first and all the others in proper sequence.

Humphrey is played with the joystick or the cursor keys. Needless to say, using the joystick makes it easier to manipulate your man over the blocks. It is available on cassette for the SV-318/328 computers from SMUG of Montreal for \$15.00 plus \$2.00 to cover postage and handling.

mail system is bracing for a mail strike this week. So I'd try to get the letter off to you tomorrow and pray that it gets through, before the strike occurs. We just received your package so I thought I'd include a note of thanks with this newsletter. Thanks.

PRESS REVIEWS
By: F. Fontaine

HAYMARKET PUBLISHING

"WHAT MSX?" is a buyers/users guide for Anglophones straight from Great Britain aimed at MSX'ers.

It is a magazine done in the same style as "COMPUTE", except that it caters solely to the various brands of MSX computers.

"What MSX?" contains many interesting articles under the following headings: NEWS, COMPETITION, ON TRIAL, BACKGROUND, STARTING OUT, ADD-ONS and BUYERS GUIDE.

Under the headings of "ON TRIAL" and "ADD-ONS" they review a few MSX computers, various peripherals and the latest software to hit the market. The "STARTING OUT" section has a small tutorial for beginners, on how to enter and debug program listings, as well as a few interesting listings to key in. "BACKGROUND" is the area where you'll find many interesting articles such as how the concept and BASIC language came into existence, what the specifications and improvements of MSX 2.0 as opposed to MSX 1.0 really are and other interesting topics of this sort.

Despite all of those interesting features "What MSX?" is still meant to be a buyer's guide. If you're more interested in having a magazine which caters to the after-sales user you would do well to consider it's sister publication "MSX COMPUTING". Of course "MSX Computing" still has hardware and software reviews as do most other magazines of this type, but, they have more programming tutorials for beginners and advanced programmers alike. As well as several program listings (which in my opinion are alot more appealing than any program I ever found in the now defunct MSX User magazine) to key in.

One thing I don't like about MSX Computing is the fact that they seem to reserve a large portion of the publication for advertising space. Oh well, I guess they need the advertising revenue if the magazine is to survive. MSX Computing's survival is more important to MSX'ers than the amount of ads in the magazine, so we MSX'ers will learn to live with such a large volume of advertising.

Both magazines are good publications and very informative. If you are interested in subscribing to either one you may write to the following address for subscription rates:

HAYMARKET PUBLISHING LTD.
38-42 Hampton Road
Teddington, Middlesex TW11 0JE
U.K.

Don't forget to specify which publication you're interested in obtaining the subscription rates for, as Haymarket is the publisher of both magazines.

BOOK REVIEWS

THE MAGIC OF SPECTRAVIDEO By: Bernard L. Burke

Machine code programmers will really like this new book/tape set from South Africa. The Magic of Spectravideo is a step by step guide to programming in machine code on the SV 318 & SV 328 computers. It starts out explaining the number systems and takes you through the process of assembling programs using "The Super Assembler" that is listed in the book

and also supplied on the accompanying tape.

All the innards of the SV-318/328 are explained in this book. The Magic of Spectravideo explains the memory maps, the VDP control registers and memory locations of variables, strings, and the music and sound routines. It teaches the user how to transfer variables from machine code to BASIC and how to use certain graphic routines in machine code.

There are 22 chapters in this book to teach you how to program in machine code and how to access many routines and memory locations directly in machine code on the SV computers.

There are 8 appendices that cover such topics as the 280 Mnemonics, ROM routines, I/O port table, hook jumps and reading input devices.

There are over 35 listings in the book and also on the accompanying tape including a version of the "Super Assembler" for both the SV-318 and the SV-328.

The Magic of Spectravideo is just what the doctor prescribes for anyone who wants to use his SV computer to make machine code programs.

There's one major drawback to this book, though and that's the fact that this book/tape set is not yet available for sale here in Canada. The reason for this seems to be a political one, as it's been very difficult for us to get anything, even information, out of South Africa since Mr. Mulrony imposed some heavy duty sanctions on the South African government. The one and only copy of The Magic of Spectravideo that we have is a complimentary copy that was sent to us by Mr. de Zwart of Computer Distributors Limited of New Zealand.

We shall try to arrange to import more copies of The Magic of Spectravideo from Computer Distributors Ltd., if they have any extra copies that they can send our way.

At the present time we have no price for this set. If we are able to import copies of this book for re-sale to our members, we will inform you of the price, etc...

Reviewed by: F. Fontaine

THE MBASIC HANDBOOK By: Walter A. Ettlin & Gregory Solberg

CP/M addicts who likes to work with MBASIC will find this book very handy to have. The MBASIC HANDBOOK is actually an MBASIC tutorial. It literally takes the user by the hand and shows him every BASIC command and how to use it, while teaching him how to write his own programs.

There are 22 chapters and each chapter deals with a certain topic. At the end of some of the chapters you are presented with a programming exercise, to try out what you've just learned. Don't worry about confirming whether or not you've completed the exercise correctly, as you always look in the back of the book to verify. But we all know that, that is cheating, don't we?

The MBASIC Handbook will show you how to create Random Access and Sequential Files. It will also explain such things as Boolean Operators like NOT, XOR, IMP, EQV, etc...

Near the end of the book there are a few very useful programs such as a Menu Driver, Payroll and Mailing Labels, which can all be modified for your own uses, once you've assimilated the preceding contents of the book.

This book may be purchased at most computer book stores, by asking for the title, authors' names and the following ISBN 0-88134-102-9.

Reviewed by: F. Fontaine

PEEKS & POKES FOR THE SPECTRAVIDEO By: Deane Whitmore

This is a handy little book for Spectravideo BASIC and machine code programmers to have. It comes complete with the ROM entry addresses, I/O tables, memory locations and the video RAM memory map and how to use it.

Deane Whitmore also explains how to use much of the information contained in this book. He has even included the sprite attribute table and the sprite pattern tables.

To top it all off he's included some programs in the back of the book as examples.

This book in no way is meant to be a programming tutorial for novices, but rather attempts to help the already proficient programmer to feel his way around the inner mysteries of the machine. Allowing him to create programs with more dazzle and speed.

SMUG of Montreal makes this book available to its members for \$15.00 plus \$2.00 for postage and handling.

Reviewed by: F. Fontaine

THE COMPLETE MSX PROGRAMMERS GUIDE By: P. Mapstone, T. Sato & I. Muriel

Now this is a book! Boy what a book! I would say that it is practically indispensable to anyone who seriously considers himself to be an MSX programmer. Even novices will learn the very basics of BASIC with this book.

This book literally deals with every topic of the MSX language. With 568 pages, it has the room necessary to explain all of the BASIC commands thoroughly, how to program in BASIC and how to access the various parts of the ROM, RAM and the VDP. There are small exercises at the end of the chapters, so that you may try out what you've just learned.

In section 3 you will find a reference guide to all the BASIC key words, which explains what they do and their proper syntax in a program. All of the key words are listed alphabetically, making them quicker and easier to locate.

Section 4 deals with the operating system itself. The system RAM is listed, it explains how to use hooks and all of the BIOS entry points are in this section of the book.

Daniel Martin - author of "Le Livre du MSX" summed it up when he said that "it is the MSX programmers BIBLE".

Any member interested in purchasing "The Complete MSX Programmer's Guide" may contact SMUG of Montreal for details.

Reviewed by: F. Fontaine

A PROGRAMMERS GUIDE TO THE MSX SYSTEM By C.I. Burkinshaw & R. Goodley

The book starts off with an overview of the MSX computer which describes the various I/O ports, chips, memory organisation, graphic modes and the tape interface.

Then the reader is given an outline of some BASIC instructions regarding the use of variables & functions, graphics, sound and program storage. In the next section the user is presented with the MSX BASIC vocabulary and succinct explanations of each command.

The following chapter attempts to explain the Z80 architecture, instruction set and address modes. This is really a very limited and basic initiation to the Z80 machine code and the programming of such.

Following that is a chapter dealing with the MSX configuration which deals with such topics as the RAM hooks, memory management, instructions of the various chips and a sample program.

The next two chapters look at a VDP (not the one used in the MSX computers) and the sound generator in extreme detail compared to the rest of the book. In the last chapter we are presented with details about the various I/O ports.

The 6 appendices at the back of the book list such things as the character codes, color table, a video RAM table, Z80 instructions and 2 extracts: one from the TMS 9118/9128/9129 Data Manual (which is supposed to be the VDP chip used in the MSX computers according to the authors). When in fact it has nothing to do with the MSX computers. The reason they have included this extract completely eludes me, since the MSX PAL computers uses the TMS-9929A & TMS-9928A and the NTSC version uses the TMS-9918A as the Video Display Processing chip. The second extract is from the AY-3-8910 Programmable Sound Generator.

In my opinion the authors of this book tried to cover everything but in the process spread themselves too thin in some areas, too thick in others and in some cases provided the users with completely useless information. However you may still be able to derive some good out of it, if you only want it as a sort of quick reference guide to everything except of course the VDP. "A Programmer's Guide to the MSX System" may be purchased through SMUG of Montreal for \$21.99 plus \$2.00 for postage and handling.

Reviewed by: F. Fontaine

CP/M AND THE PERSONAL COMPUTER By Thomas A. Dwyer & Margot Critchfield

This is really a very good book for anyone interested in working with CP/M and many other programs and/or languages such as: MBASIC, C, dBASE II, Assembly, Wordstar and Supercalc.

The six main sections of this book are: What Is CP/M?, CP/M in Action, CP/M by the Book, Professional CP/M Software, CP/M Meets Basic, and Inside Files. In the back there are 7 appendices which could be used as sort of "quick reference" guides for everything from the ASCII codes to the 8080 & Z80 Mnemonics.

The 6 main sections are broken down into several sub-chapters, to deal with portions of the main section in detail. The reader is literally given a very thorough course on using and programming in CP/M, MBASIC, C and Assembly. In the sixth section the user is even shown how to modify the BIOS in CP/M and how to use the BDOS.

Personally, I haven't yet gotten into CP/M except to use Wordstar and a mailing list that Neil Richardet made for me. But I'm glad to have the book "CP/M and the Personal Computer" available so that if I ever do decide to explore and use CP/M more, I'll have a very good book to help me through it.

We obtained our personal copy of this book through a computer book club. However you should be able to get it at most good book stores. The publisher of the book is Addison Wesley and the ISBN is: 0-201-10355-9.

Notre reunion de fevrier chez Claude a du etre annulee pour cause de maladie, mais nous avons reussi a reunir quelques personnes chez nous, a Vaudreuil. Cette reunion fut tres interessante bien que non structuree. La prochaine se tiendra le 6 Avril a 19h.30, au 3460 Peel, #111.

ARTICLES ET NOUVELLES

Nous encourageons les membres a contribuer a cette revue sous formes d'articles, mini programmes, conseils, dessins et questions. Vous pouvez aussi nous soumettre un article court, sous n'importe quelle forme, en francais et anglais. Nous permettons la copie des articles inclus dans cette revue, a condition de mentionner l'auteurs, et le club. Les opinions exprimees sont celles des auteurs, et non celles de SMUG. Qui ne peut en aucune cas en assumer la responsabilite ni celles des erreurs dans les articles, programmes et publicite.

NOUVELLES SMUG

Ce mois-ci, notre bulletin traitera exclusivement de revues de livres et programmes pour les ordinateurs SV et MSX. Nous reprendrons le mois prochain nos contenu et format habituels.

D'apres M. Gruenberg de Synoda Co., ni SVI/Bondwell, ni aucune autre des compagnies MSX ne firent d'apparition a l'exposition CES de Las Vegas cette annee.

Claude Zekri et Jean-Guy Fontaine ont assiste au Jour X-11 de Yamaha, le 25 janvier. Cette exposition s'est concentree sur les instruments musicaux et l'aspect musical du CX5M.

C. Regena, chroniqueuse chez "COMPUTE" nous a recemment envoye une gentille lettre pour nous informer qu'elle ne produirait pas sa publication "MSX TRACT" comme elle l'avait prevu, a cause des ventes faibles du MSX aux USA. Nous aimerions pourtant la remercier de la copie de ses "Learning Notes", un programme qu'elle avait ecrit a l'origine pour le TI-99/4A, puis traduit vers le MSX. Elle nous a donne la permission de le publier dans ce bulletin, et vous le verrez dans une prochaine edition.

Merci aussi a M. Cam Shearer de Yamaha Canada pour la cartouche de "Yamaha Graphic Artist" qu'il nous a si aimablement donnee. Nous vous en presenterons la revue des que nous aurons obtenu le livre qui l'accompagne.

Ms. Elaine Perry de Virgin Games, une compagnie de programmes en Angleterre, nous a envoye pour revue un jeu qui parait excellent, "SORCERY". Croyez-moi, j'aimerais le tester, car il a l'air d'etre tres bon. C'est une aventure graphique qui contient 50 tableaux. Cependant, nous n'avons pas ete capables de charger le jeu, donc encore moins de le faire marcher, ni sur le SV-738, ni sur le SV-328 (avec l'aide du langage MSX). Je crois que l' unite de disque incorporee et le BASIC sur disque nous empechent de charger ce programme sur le SV-738. Si nous arrivons a contourner le probleme, la revue vous sera donnee aussitot. Le langage MSX nous permet d'utiliser 90% des programmes MSX sur cassettes, mais de temps en temps, nous en rencontrons un trop rebarbatif, et SORCERY fait partie de ceux-ci.

M. Yves Leclerc, de "LA PRESSE PLUS", a mentionne notre groupe dans l'edition du 25 janvier de sa colonne: "Demain L'An 2000". Merci, M. Leclerc. Nous aimerions bien que d'autres chroniqueurs Nord-Americains aient le courage de faire de meme.

BAS - le groupe d'usagers SV de Norvege nous a recemment fait parvenir quelques programmes interessants du domaine public ainsi que quelques bulletins. Y aurait-il parmi vous quelqu'un qui parlerait le norvegien et qui serait pret a effectuer des traductions pour nous?

SMUG de Montreal envoie a present des catalogues de peripheriques, programmes commerciaux, livres et programmes du domaine public disponibles pour ses membres. Vous devriez recevoir ce catalogue avant la fin de Mars, et il sera valide jusqu'en Septembre. De temps a autre, nous ferons paraître des listes de nouveau materiel, mais ce ne seront que des listes partielles, des additions au catalogue.

REVUE SOFT

Par Frances Fontaine
Traduit par: Claude Zekri

PANDA SOFT

SEABATTLE: Dans ce jeu, vous etes confronte a l'ordinateur. Vous devez cacher cinq bateaux sur un damier, et l'ordinateur fera de meme. Ceci fait, vous devrez utiliser un joystick ou les touches de curseur pour rechercher et detruire la flotte de la machine avant que vous ne soyez detruit vous-meme.

C'est la version informatisee d'un jeu tres populaire, mais ce n'est pas un jeu d'arcade, plutot de strategie et de chance.

Le mode d'emploi est inclus dans le programme, de facon a ce que vous n'ayez pas l'occasion de perdre de papiers. Il est tres facile d'apprendre a le jouer.

La musique est bonne, ainsi que les effets sonores, mais les graphiques pourraient supporter des ameliorations. Dans l'ensemble, j'ai apprecie le jeu et je suis certaine que d'autres utilisateurs l'aimeront. SMUG de Montreal mettra ce programme a votre disposition tres bientot, en MSX et SVI.

NEW DISK: est un programme utilitaire en BASIC, tres pratique, qui vous permet de formater et Sysgener des disques sans etre concerne par l'ordre des unites de disques. Ceci se fait en choisissant l'option 1 du menu, et en suivant les instructions sur l'ecran. Il structure physiquement et logiquement, puis verifie le disque (que ce soit un disque vierge ou precedemment formate) en une seule operation rapide. Autre avantage: le sysgen est tres rapidement accompli compare a celui qui est fourni sur le SV-DISK BASIC.

La partie COPY du programme fonctionne rapidement, de l'unite 1 a la 2, et faire une copie de securite devient un jeu d'enfant.

Ceci est un tres bon programme pour toutes les operations de base sur disques, simplifiant enormement la procedure. "New Disk" sera bientot disponible pour le SV-328, et peut etre aussi pour le MSX a travers SMUG de Montreal.

MICROCOM

NUGGIT: Ce jeu existe pour les ordinateurs MSX de 32k. c'est un jeu d'action tres rapide, et le joystick est necessaire pour y exceller. On peut y jouer avec les touches-curseur, mais l'action precipitee ne permet pas de soutenir le rythme.

Attention utilisateurs de SV-738! Ce jeu incorpore DEF USR, ce qui obligera un arret premature du programme si une unite de disques est detectee. Donc le programme est inutilisable par les usagers de SV-738. J'ai reussi a le charger dans le SV-328 en utilisant le langage MSX sur cassette, tout en gardant la boite d'expansion eteinte entre le chargement

du langage MSX et le chargement de NUGGIT.

Vous devez ramasser l'or qui se trouve autour de la mine mais éviter les gardiens a tout prix, qui vous elimineront s'ils vous attrapent. Vous avez la possibilite de scruter l'or pour reperer sa position par rapport a vous. Le prix d'une vie supplementaire vous permet de "Hyper-créuser". Mais "Hyper-créuser" vous donnera un "Diamant Intelligent" au fond de la mine qui vous permettra de recoller tout l'or de la mine automatiquement. Tout l'or doit étre ramasse avant que vous ne puissiez remonter a la surface, ce qui vous donnera une recompense supplementaire.

Il y a cinq niveaux de difficultes et 25 plans de ce jeu. l'action est tres rapide et le jeu tres difficile a jouer. Votre interet devrait étre soutenu pendant quelque temps.

Vous pouvez commander ce jeu de SMUG de Montreal, voir le catalogue pour les details.

WAFFLE: Le theme de ce jeu est étrange. On utilise un coin de fromage pour retirer de la moisissure sur une gauffre par frottement. Pendant ce temps, des "Anihilateurs" qui detestent le fromage essaient de detruire votre pointe.

Quand vous avez fini de nettoyer une gauffre, une autre vous est presentee et ainsi de suite. Le jeu devient de plus en plus difficile au fur et a mesure qu'il progresse, et il se termine quand toutes vos pointes de fromage ont éte detruites par les Anihilateurs.

Le joystick et les touches-curseur peuvent étre employes, et le jeu sur cassette marche sur ordinateur de 16k minimum. Voir le catalogue pour les details de commande.

DEMON DISKS: C'est un jeu d'arcade pour le SV-318/328 dans lequel vous devez tuer l'Androïde de l'ordinateur en lui lançant des disques. Bien entendu, l'androïde de l'ordinateur devient de plus en plus agressif et précis a mesure. que le jeu avance.

L'objet du jeu est de voir combien d'androides vous étes capable d'eliminer avant que les 3 votres soient perdus.

On joue a Demon Disks avec la barre d'espace et les touches-curseur, ou un joystick. Disponible a SMUG de Montreal pour \$10.00 plus \$2.00 de transport.

CDL

DISCAT: C'est un excellent programme pour quiconque a plus de disques qu'il ne peut en manipuler. Vous est-il arrive d'avoir a charger 2 ou 3 disques juste pour trouver un programme particulier? Vous comprendrez alors l'utilite de ce programme.

Discat peut garder la trace de plus de 900 filieres, et vous dira non seulement sur quel disque vous trouverez ce que vous cherchez, mais aussi si vous le trouverez en ASCII, BINAIRE, ou CODE MACHINE.

Discat vous listera les filieres soit dans l'ordre alphabetique, soit par numero de disque. Il vous indiquera de plus combien d'espace libre reste disponible. Il sauvegarde votre catalogue sur disque, et vous pouvez obtenir une impression du catalogue courant.

Ce programme bien entendu exige que vous soyez en possession d'au moins une unite de disques, une carte de 80 colonnes et pour étre plus pratique, une imprimante. Personnellement, je trouve Discat excellent, et d'une grande aide dans mes fonctions de libraire du groupe pour les programmes de domaine public de SMUG de Montreal. J'aurais toutes les

difficultés du monde à localiser les programmes de SV-BASIC sans Discat.

Le programme vaut \$39.95 plus \$2.00 pour le transport, le tout payable à l'ordre de SMUG de Montreal.

BILL MANAGEMENT: On exige de vous que vous introduisiez un mot de passe qui est enregistré, mais non affiche sur l'écran. Ceci vous assure toute confidentialité. Si vous ne donnez pas de mot de passe, le programme n'ira pas plus loin. Ce doit être un mot que vous n'oublierez pas, mais aussi pas trop évident.

Une fois le mot de passe introduit, on vous présente un menu de 13 différentes options. Elles vous permettent d'accomplir différentes choses comme d'ajouter de nouveaux comptes, examiner l'histoire comptable de cheques, lister tous les comptes ou seulement les comptes actifs, les noms des comptes, revoir les transactions du mois, supprimer un ou plusieurs comptes, sauvegarder les comptes sur disques, et finalement sortir du programme.

C'est un programme très flexible, qui vous permet de mettre à jour un compte à la fois, en rajoutant une facture, en la payant immédiatement, en vérifiant l'histoire de ce compte particulier. Vous pouvez aussi sauter dans le programme, par exemple payer les factures de tous les comptes en même temps, inscrire le montant du, ou vérifier l'état du mois.

Toutes les options (mises à part celles qui concernent l'opération sur disques) vous donnent l'occasion d'imprimer ce qui se trouve sur l'écran. C'est un avantage très utile quand vous avez besoin d'une preuve écrite. L'utilisateur peut inscrire 20 comptes. Les catégories pourraient être les cartes de crédit - un pour chaque carte - le loyer, les paiements d'auto, le téléphone, l'électricité, les assurances, etc... Le budget de 20 comptes sera donc bien maintenu, et sauvegardé sur disque.

Je pense que ce programme est très flexible, simple à comprendre et à opérer. Il exige cependant une unité de disques, et l'imprimante est optionnelle, mais nécessaire pour un rapport sur papier.

Bill Management pour le SV-328, coûte \$39.95 plus \$2.00 de transport. Chez SMUG de Montreal.

MR. MICRO

HUMPHREY: C'est une version du populaire "Q-Bert". On le trouve pour le Spectravideo et le MSX, mais Smug de Montreal n'a en stock que la version SV. Vous pouvez commander la cassette en MSX en suivant les instructions du catalogue qui vous sera envoyé sous pli séparé.

Le joueur peut commencer à n'importe lequel des 4 niveaux, qui correspondent à chacun des 4 différents écrans. Bien entendu, si vous commencez au niveau 1, vous passerez par tous les écrans, et si vous optez pour un autre, vous jouerez les autres jeux successivement.

Humphrey s'utilise avec un joystick ou les touches-curseur. Inutile de vous dire que votre bonhomme est plus aise à manipuler avec le joystick. Humphrey est disponible de SMUG de Montreal pour \$15.00 plus \$2.00 pour l'envoi.

REVUES DE PRESSE
Traduit par: Claude Zekri

PUBLICATIONS LASER

LASER est l'editeur francais qui met sur le marche "MSX Magazine" et un guide d'acheteur appele "Guide du MSX"

MSX Magazine comprend les habituelles Nouvelles, peripheriques et revues de logiciels, les trucs et beaucoup de listings de programmes. Il y a quelques photos couleur brillantes, mais la plus grande partie est tiree sur papier journal (46 Pages). Dans l'edition de Juillet/Aout 1985, qui etait aussi la premiere edition, il n'y a absolument aucune aide pour un eventuel programmeur et ses projets. Si vous etes interesses dans des listings de programmes, et des revues de produits, alors peut-etre que MSX Magazine ne vous decevra pas.

Le Guide du MSX est un miroir de MSX Magazine dans le contenu, mais ils ont laisse tomber les articles traitant des nouvelles et des trucs pour programmeurs. A la place, il ordinateurs sont scrutes, ainsi qu'un nombre de peripheriques et de logiciels, et 8 listings remplissent le reste de l'espace.

LASER n'a pas d'imagination quant a ce qui pourrait produire un certain interet chez le lecteur. Cependant, pour les obsedes de la revue et les dactylo avides, ces magazines valent leur pesant d'or.

LE LIVRE DU MSX, Par Daniel Martin

Le livre de MSX est un ouvrage de reference sur le Langage Machine MSX pour programmeurs chevronnes. Ce n'est vraiment pas un livre pour debutants.

Il couvre des secteurs comme l'architecture interne, les registres VDP et les tables, le generateur de son et ses tables, le PPI, le ROM et comment l'acceder, les points d'entree du BIOS... Il discute aussi d'autres instructions moins connues en BASIC de MICROSOFT, comme POKE, PEEK, OUT, WAIT, etc...

M. Martin y a aussi inclus des trucs pratiques pour programmeurs, ainsi que les listings suivants: un moniteur, un desassembleur, un generateur de caracteres et un generateur de lutins.

A la fin du volume, on trouve plusieurs tables sur les poles d'entree/sortie, les registres de son et VDP, et les codes d'instruction en BASIC.

Ce livre est une affaire excellente pour les programmeurs. Il vaut \$19.95 chez SMUG de Montreal, et ajouter \$2.00 pour l'envoi.
Revue par: F. Fontaine

MSX EN FAMILLE Par Jean-Francois Sehan

MSX en Famille fut le premier livre MSX a parvenir en Amerique du Nord, en janvier dernier.

Ce livre contient les listings de 40 programmes pour usage familial. Il y a des programmes de finance, educationnels, de loto, tricotage, de recettes, de sante, d'utilite generale, et divers autres.

Chaque programme est decrit en detail, et accompagne de ses diagrammes, ceci permettant a l'usager de faire des modifications selon ses besoins.

La plupart des programmes inclus sont aussi facilement modifiables pour usage sur le Spectravideo.

Certains de ces programmes ont l'air interessants et utiles. MSX en Famille peut etre achete dans toutes les librairies francaises de la province de Quebec. Pour rendre votre recherche plus aisee, vous pouvez le demander en mentionnant son numero: ISBN 2-86595-166-9. MSX en Famille est publie aux Editions du P.S.I. Revue de F. Fontaine

LE GUIDE DU SPECTRAVIDEO Par Daniel Lemahieu & Etienne Dubois

Pendant pres de 6 mois ce fut la premiere et seule source d'information concernant les fonctions et la programmation du SV-328, et nous fumes tres heureux de l'avoir.

Le Guide du Spectravideo est donc l'un de ces livres, si bon pour la programmation en SV-BASIC que je souhaiterais en avoir une traduction anglaise. Malheureusement, il n'en existe guere.

C'est la sorte de livre que tous les possesseurs d'un SV-318/328 devraient avoir, specialement ceux qui debutent en informatique. Le Guide du Spectravideo detaille l'utilisation de presque toutes les commandes en SV-BASIC et decrit meme les choses triviales que nous ne discutons jamais, mais qui sont quand meme importantes, comme le fait de sauvegarder et verifier les programmes sur cassettes.

Ce livre aurait du etre traduit en anglais et fourni avec l'ordinateur au lieu de ce minable livre qu'on appelle "Manuel de reference". Le Manuel du SV ne couvre meme pas le dixieme de ce qui est traite dans le GUIDE, et malgre tout Spectravideo a l'audace d'appeler le sien un "Manuel de reference".

Le Guide du Spectravideo ne vous donne pas seulement les commandes, mais vous fournit des programmes de demonstration. Les auteurs essaient meme de vous enseigner comment programmer.

Ceci est vraiment une necessite pour tous usagers SV. Il est aussi publie par P.S.I. et le numero est ISBN 2-87109-012-2. Dans toutes les bonnes librairies. Revue de F. Fontaine

LES DESSOUS DU SPECTRAVIDEO Par: Daniel Martin

Pour ceux et celles qui aimeraient connaitre davantage leur SV-318 & SV-328 et ainsi utiliser davantage ses capacites; il exist un tres bon livre disponible. Il s'agit du livre de Daniel Martin.

On y explique: - L'organisation interne de Spectravideo

- La structure de la memoire
- Le processeur de gestion d'ecran
- Le generateur sonore avec explication complete et exemple de la commande SOUND
- La programmation des sprites
- Les differents screen
- Tables des principales adresses de la ROM
- Explication des instructions CLEAR, POKE, PEEK, OUT, INP, WAIT, USR, DEFUSR, VPOKE, VPEEK, VARPTR, SWITCH, GET et PUT

- Un chapitre sur les trucs et astuces. Ex: affichage du logo du SV, scrutation du clavier, modification du message OK, modification des messages d'erreur, conversion du clavier en azerty, etc...

Ainsi que de nombreuses explications techniques sur le VDP, PSG, PPI et differents registres et leur utilisation.

Un y retrouve egalement de nombreux tableaux et programmes dont un de desassembleur en basic.

Donc, un tres bon livre a conseiller pour aller encore plus loin dans la comprehension et l'usage du SPECTRAVIDEO.

Un livre que tout possesseur de Spectravideo devrait avoir. Merci a Daniel Martin, et je souhaite une suite a ce livre.

Revue de: Denis Landry

SMUG of Montreal
443 boul. Roche
Vaudreuil, Quebec
Canada, J7V 2N4
Tel. no. (514)-455-4705

We are the official Spectravideo and MSX user's group for the Montreal area as recognized by Spectravideo Canada, Yamaha Canada and Bondwell International. A family membership entitles you and your family to attend groups meetings, trade programs and receive 1 copy monthly of our newsletter per family. An Individual membership is for individuals who wish to attend the groups meetings, trade programs and receive a copy of our monthly newsletter. Foreign members are allowed to trade or purchase programs and receive monthly newsletters through the mail.

As a member of the group you will be able to purchase Spectravideo hardware and software at reduced prices from SMUG of Montreal. Non-members and associate members are permitted to attend the monthly groups meetings, by paying \$3.00 admission fee at the door.

Nous sommes le groupe officiel du Spectravideo et MSX pour la région de Montréal. Comme membre à plein temps vous pouvez échanger vos logiciels avec le groupe pour en obtenir d'autres. Aussi vous pouvez recevoir notre "bulletin" chez vous mensuellement, et pouvoir acheter des logiciels et des périphériques pour votre Spectravideo à un prix réduit. Les non-membres et les membres associés pourront aller aux réunions en payant \$3.00 à la porte.
