

S P E C T R A V I D E O

U S E R S G R O U P -- Wgtn

Newsletter Number 20 -- April 1986

The next meeting is on Monday, April 21st at 7.00 in the Staff Common Room, Wellington Clinical School, Main Street Newtown, the next will be on 19 May 1986.

Wellington SV Users Group

Committee Members

Chairman ----- Darryl Alison Ph 85522 (Paraparaumu)

Secretary ----- Joseph Dol 889275

Treasurer ----- Ross Fletcher 788454

Don Stanley 896379

Garry Clark 367872

Newsletter Committee

Steve Hanson 843495

John Matthews 327805

Other specific areas of responsibility for committee members are

Don -- Software Consultant

Garry -- Radio Access & public domain tape software;

John -- Library;

Darryl -- Program evaluation committee chairman & Kapiti users representative.

Palmerston North Subgroup

The Palmerston North subgroup are now holding meetings on the 1st Monday of each month at member's homes. For more information they suggest you contact:

Steve Lacy; C/o Kesta Electronics, WANGANUI. Ph (064) 55501(w) 47310(h).

Grahame & Stuart Merrill, 25 Heatley Ave., PALMERSTON NORTH. Ph (063) 71337.

Justine Pickering, 68 Wakeman Street PAHIATUA. Ph (0650) 8390.

Graham Horne, 36 Miro Street, PALMERSTON NORTH. Ph (063) 87829.

NEWSLETTER CONTRIBUTIONS

A plea from your editors

If you are submitting programs to go in the newsletter they MUST satisfy the following conditions or they will NOT be printed.

- 1 ... be typed/printed on A4 paper with about 5 lines left blank at top and bottom of page and an inch at least around the sides
- 2 ... typed with a dark ribbon OR printed using emphasized print mode
- 3 ... include a description of what the program does , typed on A4 paper with example input
- 4 ... In the case of programs above 20 lines in length they should be sent on cassette , in this case there is no need for the printout as I can merge them into the newsletter. Enclose a stamped addressed envelope for return of cassette
- 5 ... line numbers should be continuous -- do a RENUM before printing the programs
- 6 ... PLEASE MAKE SURE THEY WORK . and would readers please note that I am NOT responsible for programs sent by people which do not work .
- 7 ... In the case of screen dumps from 3d plotters please indicate the function used and try to get the print as dark as possible -- not always easy I know .

All other newsletter contributions should be sent to The Editor, P.O Box 26050, Newlands. They may miss the next newsletter if sent anywhere else. Articles should follow 1 and 2 above.

Deadline for Newsletter articles is the 30th/31st of the month previous to publication.

Please follow these guidelines, articles with a 4mm edge all around can not be printed , and neither can articles produced on a dot matrix printer with low resolution . They are simply unreadable after photocopying.

Club Subscriptions

The club subscription is now \$15.00/year.

Note that expiry date for subscriptions is printed on the address label of newsletter. Subscriptions not renewed a month after this date will not receive newsletters from then. Check your label !!

Action Computers -- P.O Box 7442, Wellington South.

Photocopying from Library

Anybody requiring articles from the library to be photocopied please send request to the LIBRARIAN, not any other committee member. We have had problems with articles not being copied when requested, please ensure that requests go to the librarian.

Also membership renewals should be sent to Box 26050, Newlands, Wellington, not to any other box, otherwise it is possible that the mailing list will not get updated.

SV 328 Owners:

The Magic of SpectraVideo is still available for \$55.00. This includes an assembler on tape. Very limited numbers available so see Don - or your local dealer.

DOUBLE-SIDED BASIC FOR SV OWNERS

For those of you with access to double-sided drives, this is for you ...

For \$20.00 you get:

- a disk
- FREE p&o
- ability to format double sided disks, under SV BASIC
- double sided BASIC
- full compatibility with single-sided BASIC
- 338K per disk (vs BASIC 168K)

AND, all your single-sided disks can be upgraded to double sided with no loss of data!!

Send name, address and \$20.00 to BRIAN DOROFARFF
42 MAHOE STREET, HAMILTON.

AND NOW FROM THE "YOU BLEW IT STEVE !!" DEPARTMENT

I must now apologise to Gary for my ignorance regarding Public Domain Matters. So to clarify matters here's how it goes:

Public Domain - Basic Programs are produced on tape ONLY.

These are obtainable by writing to Gary Clark care of the Club's Post Office Box.

Public Domain - CP/M Programs are available through the Club's Post Office Box. (Deane Whitmore is now unable to look after CP/M Public Domain as he has in the past - Thanks Deane for your contribution in this area - and we still look forward to some contributions as per Ross's Article further in the Newsletter: Ed)

For Public Domain Tapes, send \$3.00 per tape, PLUS a handling charge of \$2.50 per order. This charge includes the cost of the tape supplied by the Club, ie you don't need to send us a tape.

For Public Domain Disks, send The Club a CP/M Formatted disk (at the moment we can only cope with Single-sided format), plus a stamped, addressed return envelope (with suitable packaging to protect your disk from the rigours of the Post). Steve Hanson

FOR SALE: Laurie Callender has the following gear for sale:
605 Dual 360K Drive expander, 80 Col Card, KAGA Green Screen Monitor (80 Col with Sound), CP/M Software: Wordstar; Spellstar; DBASE II; Supercalc; Turbo Pascal; Multiplan, BASIC Software: MSX & games. ALL THIS FOR \$2250.00 Phone Laurie on New Plymouth 20760.

FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE FOR SALE

Due to a current infatuation with MS DOS and Hard Drives I am able to offer for sale this unique Spectravideo System with a 30 day personal Warranty against malfunction or breakdown (except for Joysticks).

**SVI-328 MK II COMPUTER
605 EXPANDER**

- Drive 1 = Single side .25 Megabyte (155K formatted)
- Drive 2 = Double side, DOUBLE DENSITY Shugart Quad 1 Megabyte drive returning 668K under CP/M Reversion 2.23 (supplied).
- 80 column card
- Substantially strengthened power board to run the Shugart and give one of the best monitor displays you will see on an SVI.
- Centronics Parallel Printer Interface & Printer Cable
- Disk Controller

- SVI 904 Cassette Drive
- Two SVI Quickshot 1 Joysticks
- Original Distribution disks for SVI DISK BASIC & CP/M 2.20 & CP/M 2.22
- Substantial Software Collection including:
 - Documented SL Microsystems ACCOUNTS program for Debtors, Creditors, Invoicing & Stock control, (free).
 - Original Tape programs with disk conversions
 - Flight Simulator
 - Text Editor
 - Plus Plus Plus!!!!
 - All the NZ held Public Domain CP/M Software
 - Label and Mailing Utilities running under Wordstar 3.30
 - Double Sided Disk Basic (Marketed by Brian Dorofaeff)
 - Australian PDS Software & documentation available only on subscription
 - Pacman
 - An enhanced version of "Adventure"
 - The Dataflow Accounting System - a sophisticated, widely used business suite running under dBase II 2.4. Features a Sales Tax reporting facility that would handle GST.
 - New Sweep
 - Plus four more volumes to come!
- Books
 - SVI Manual
 - SVI Basic Reference Manual
 - CP/M Users Manual
 - Osborne CP/M User Guide
 - Deane Whitmore's "Peeks & Pokes"
 - Full set Wellington Users Group Newsletters
 - CBASIC Users Guide
 - CP/M Fast Reference Guide
 - WordStar Quick Reference Guide
- 20 Single Sided Single density Disks
- New Green Screen Monitor

**ALL THIS FOR ONLY \$2500 THE LOT
\$2300 WITHOUT THE MONITOR**

WORDSTAR ENHANCEMENTS THROUGH PATCHING

Following on from last month the necessary patches required to WORDSTAR to enhance dot matrix printers and improve screen displays is now presented.

INITPF+18h - Address (0369) - Sets the number of characters for the default page offset, the margin that Wordstar automatically supplies when printing. The standard value for this is 08h. It can be changed to anything.

INITLM - Address (036A) - Sets the default left margin on the screen. You set this value to one less than the margin you want. Its standard value is 00h, which sets a left margin of 1.

INITRM - Address (036B) - Sets the default right margin on the screen. As above, you set this value to one less than the margin you want. Its standard value is 40h (64 decimal), which sets a right margin of 65. Remember to enter hexadecimal values for all address changes.

INITWF+01h - Address (0386) - Turns right margin justification on or off. The standard setting is FFh, which turns justification on. 00h turns justification off for ragged right margins.

INITWF+09h - Address (0376) - Sets the default line spacing for both screen and printer. The standard value for this byte is 01h, which sets the line spacing to one.

PAGFIL - Address (03E8) - Defines the character used to mark page breaks on screen. Standard setting is 2Dh, the hyphen (-) character. You can change this character to any one that you want.

ITOPN - Address (03FD) - Turns page numbering on or off. The standard setting is 00h, which causes page numbers to be printed, unless you specify otherwise with a dot command. Patch this byte to FFh if you want the default to be no page numbers.

BLDSTR - Address (069A) - Sets the number of strikes used to create boldface (^PB). It should be set to 03h, but you can change it to any number of passes required.

DBLSTR - Address (069B) - Sets the number of strikes to create double-strike (^PD).

Most people now seem to have printers that use parallel interface. Because Spectravideo's have the parallel port assigned as the primary list device, it's dead easy to use WORDSTAR with a parallel printer. But if you try to edit one file while printing another, you'll face many annoying delays and lose characters from the keyboard. The problem with the standard installation is that WORDSTAR has no way of knowing when the printer is busy and when it's ready for more characters. The solution is to install a "printer-busy test" routine in the area labelled MORPAT. To make

sure there's room for this routine, load DDT and WS.COM. At DDT's hyphen prompt type -D0310 <RTN>.

This command tells DDT to display part of WORDSTAR starting at address 0310h. In response, DDT should show you something like this:

```
0310 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00
0320 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00
```

It will show you more lines than I have, but as long as you have two lines of 00h at 0310h and 0320h, you're set to go. Patch in the following 26 bytes beginning at address 0310h.

```
ES EH D5 21 10 03 11 17 00 19 D1 E3 E5 D5 2A 01 00 11 2A 00
    19 D1 E3 C9 DE 01 C9
```

Check your entries carefully and then patch label HAVBSY - Address (0718) from 00h to FFh. This change tells WORDSTAR you now have a busy routine.

Finally, at LIBSY - Address (0719), patch in the following bytes: C3 10 03. Now you're done. These bytes tell WORDSTAR to jump (C3h) to address 0310h to find the busy routine.

Test this patch carefully. You should find that editing one file while printing another file is less frustrating now. It's still possible to bog down the system by hammering on two keys as fast as you can, but under normal conditions all should run smoothly.

BUG page 3 Jan/Feb 1986?

The program that converts bytes into DATA statements I had problems running due to an error message in line 150 "Out of string space". I could only get the program to run with a value of < 90 in line 160, in place of value 220. However I finally chose a value of 74 because this would limit the number of columns to just under 80, allowing for a line number. This looks better for 80 column print outs and is readable for 40 column screen listing (2 lines).

VIRTUAL SCREEN - FOR HI-RES GRAPHICS

By John Matthews.

The following pages give a simple outline of how a section of memory may be set aside in PASCAL so that you can write a graphic image with greater than 256x192 pixel resolution. The sample program sets up a 'Virtual Screen' in memory of approx 575x470 pixel resolution. It draws a few circles and then allows you to display a window of this Virtual Screen on the SV's hi-res graphic screen. - Beyond that, your imagination is the limit.

=====➔

```
program Virtual_Image_Graphics_DEMO;
```

```
const pi = 3.1415926;
  Pi_Over_4 = 0.7854 ;

CLOAD JUNIOR

by Garry Clark

MC BUGS page 337

If you own the book "Basic Reference Manual for the 318/328" and followed the suggestion on p. 337 to: 'Try the following memory bank RAM size test program:' you probably have given up in frustration; especially if you ran the program without saving it to tape first.

There are two bugs.....the corrections are;

LINE 310 7C

LINE 350 09

If you don't know much about machine code or the Hexidecimal numbering system then be careful entering in the DATA. Note all the "0"'s are noughts and hexadecimal letters only go to "F". You don't need to type in the REM "" messages at lines 350 - 390 or the ones after the DATA Hex Numbers. Save to tape and if you want to check the listing (as you should), you can temporarily put REM statements(') in front of lines 100,110,160,170 & 200. Line 730 can be changed for a screen printout of memory (Change LPRINT to PRINT). When the program is run it will read the DATA (Machine code) in the memory from &HD000 to &HD045. This is of course the DATA from line 220. Note that 00 = 0 and 0F = F. etc If the listings check out correct then take out the REMs on lines 100,110,160,170 & 200 and save to tape before running.

What should happen well on a SV328 it prints out:

Bank 21 = 32768

Bank 31 = 0

USING DEVICE DESCRIPTOR "CAS:"

For those who have cassette systems, you may not have discovered that how to use "cas:" in load & load operations. For instance if you own one of the Mass Tael machine code programs such as;

Telebunnie BLOAD"bunnie",r

try BLOAD"cas:",r this does all MC programs.

For programs using LOAD"name" the same applies ..

try LOAD"cas:" This is handy when you have SAVED a file which you can not remember the name of.

Other variations: LOAD"cas:",r runs a program directly.
RUN"cas:" same as (LOAD"cas:",r) above.

RESTORATION AFTER PROGRAM BREAK

There are many programs which are very frustrating to use because when one breaks from the program (CTRL + STOP) it leaves eg. the screen blank, no function keys or cursor. To overcome this use the following with the program. You may not need all those routines at 5000 and they can be written on the same program line.

```
FRONT OF PROGRAM 5 ONSTOPGOSUB 5000:STOPON:'stop interrupt
END OF PROGRAM 5000 COLOR15,4,5:'Resets colours
SCREEN0,1: 'Function Key display / c1s
DEFUSR=89:X=USR(0):'Resets F key labels
LOCATE,,1: 'cursor appears
END 'ends the program
```

FROM THE MAILBOX by Ross Fletcher

As a private box holder the SV group gets it's share of junk mail - offers for hosiery and ladies knickers are fairly common arrivals in the box. The latest offer tells us that April 23 is Secretary's Day and we should thank her/him by sending flowers!! (Sorry Joseph, the funds won't stand it). It is perhaps appropriate to tell members about some of the more useful items that have arrived recently.

We regularly receive the Newsletters from the Montreal Users Group, the Australasian magazine from the Tasmanian group and one from the Brisbane group. We have just taken out a subscription to "Computer Forum" an exclusively SV and MSX publication published by the outlet in Forest Hills, West Australia whom some of you will know about. We send our newsletter to a New England and to the Cape Province group in South Africa but as yet haven't had anything back. We also get the Waikato group's newsletter and the one from Auckland which is rather irregular. These are usually available at meetings and photocopies of the programmes are available from the Librarian, John Matthews - although the PD programmes in the overseas mags are often put on to our own PD tapes and will be available from Gary Clark.

The Wellington Microcomputer Society sends their newsletter to us a few days before their meeting but it has been reaching us after the meeting. This has now been remedied and I have convinced them it is a good idea to put the date of their meeting the following month also. They meet at the Royal Society rooms in Turnbull St on the second Tuesday in the month although sometimes there is a venue change. Some of the topics seem interesting if you are not completely blinkered on Spectravideo. If anyone is interested in attending the meetings it would pay to check with the Secretary, Peter Cowley on 894-911 or Chairman, Bruce Wills 861-662. May's meeting is entitled "Expert Systems" and will be on May 13 at 7-30 pm.

Quantum Enterprises of Box 4467 Christchurch advise us that they sell computer accessories including diskette mailers, envelopes and rigid holders, and storage boxes. They have a list of Computa-Covas for various computers but I note that SV is not on the list. They also have Printer stands and kitset desks for sale.

Remarkable Enterprises of Box 1415 Dunedin (Freepost 191) are offering DS/DD diskettes (5.25) at \$4-50 for 50 or more plus a free storage box. For 100 or more they come at \$3-70 plus a storage box for every 50 disks! They also sell printers and software - virtually the whole Borland (Turbo pascal) range seemingly only in MS-DOS but maybe they could be persuaded...

Deane Whitmore has sold his Spectravideo to join the move to IBM clones. As such he has sent all of the CP/M PD software to us (list in the February newsletter) for distribution. There will be a description of what some of the programmes do in the next newsletter for those who still want any of the programmes. You should send your blank disks to the OUR box number. Deane says his new computer has a multiformat programme so hopefully he will still be able to sort out CP/M software from other sources for us.

Computer Distributors Limited

46B, TAHAROTO RD, TAKAPUNA, AUCKLAND, NEW ZEALAND. P.O. BOX 31355 MILFORD. PHONE 495-809, 495-824. TELEX 60206.

31 March 1986.

To: All CDL dealers

Dear dealer

It is with regret that we have to inform you that as per April 1st, 1986 Computer Distributors Ltd. has ceased trading as a computer importer/distributor.

The present economic climate as well as a rapidly declined business in our market area are some of the factors that have led to the decision taken by Consolidated Enterprises' board of directors last week.

We have arranged for the continuation of technical support and repair of CDL products by:

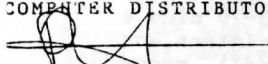

Hitech Services Ltd.
P.O.Box 32-043, 17 Duders Avenue
Devonport, Auckland
phone: (09) 453-210
Mr. J. Ley

All repairs currently at CDL will be dealt with by Hitech Services. New repairs are to be sent to the above address, NOT CED. Hitech will charge the end user and dealer direct for any repair work performed not under warranty. Warranty repairs will be at no charge to the customer. Hitech Services will contact you shortly with details of their service and charges.

Remaining CDL stock will be auctioned off and details of it will be sent to you in due course.

Thank you for your support to Spectravideo products and we wish you all the best for the future.

Yours faithfully
COMPUTER DISTRIBUTORS LIMITED

Peter de Zwart
Manager
