SPECTRA HOME ECONOMIST™

FOR THE SPECTRAVIDEO
SV·318/SV·328
PERSONAL COMPUTER SYSTEM

TAPE

SPECTRAVIDEO™

Committed to developing the very finest computer software.

Congratulations! You have in your hands two of Spectravideo's exceptional home utility software programs.

Not only will they save you a great deal of time—they will make two important aspects of home management more efficient. Perhaps most important of all, they remove the tedious work and make both RECIPE and COUPON management a lot more fun.

At Spectravideo, we not only make the finest computer hardware, we are also fully committed to making available the best collection of software to cover all categories, including education, personal interest, business applications, entertainment, and of course, home utility. In this latter category, SPECTRA HOME ECONOMIST is only the first of a series that includes (or will include soon) SPECTRA WRITER, ADDRESS BOOK, MORTGAGE AMORTIZATION & DEPRECIATION, HOME BUDGET MINDER, SPECTRA SPREAD SHEET, SPECTRA FILE CABINET, SPECTRA CHECKBOOK, SPECTRA DIARY, and SPECTRA STOCK BROKER.

The introduction of the Spectravideo computer system marked the end of the disposable computer. Our far-reaching software development program is just one more reason why Spectravideo is truly "The system you'll grow into, not out of."

SPECTRA HOME ECONOMIST™

INTRODUCTION

SPECTRA HOME ECONOMIST is comprised of two software programs in standard, cassette form. COUPON MANAGEMENT takes up Side A of the tape, RECIPE MANAGEMENT takes up Side B.

These are easy-to-use, self-guiding programs. Users with even a little computer experience will be able to put them to work at once, using only the brief guidelines. However, to get the most out of these home utility programs, we advise that all users read this booklet in its entirety.

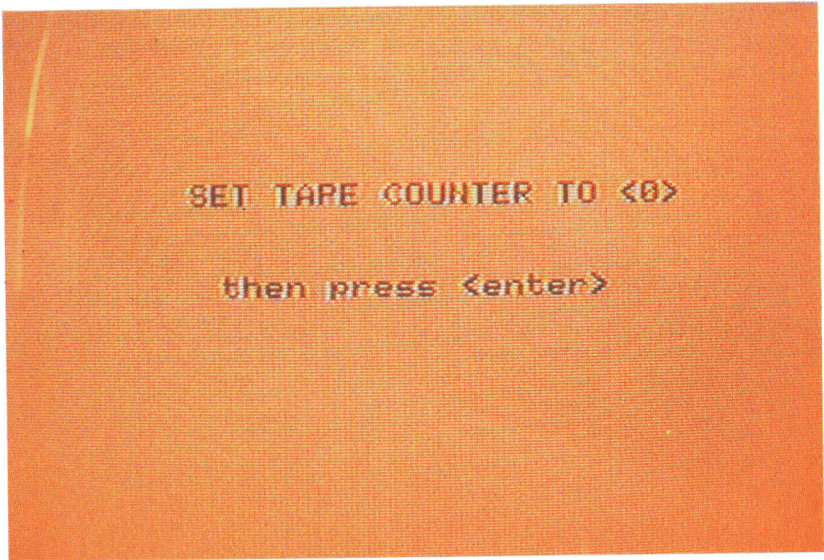

To utilize these programs, you will need Spectravideo's SV-318 or SV-328 computer, Spectravideo's SV-903 Data Cassette and an ordinary TV or monitor. After reading the relevant parts of the user's manuals for these appliances—especially those sections dealing with safety and precautions—proceed as follows: (1) Hook up your computer to TV or monitor, (2) Hook up the Data Cassette to the computer (the necessary cable is permanently attached to the Data Cassette) then (3) follow the brief guidelines. If you get stumped on anything, turn to the more detailed instructions.

BRIEF GUIDELINES FOR USING SPECTRA COUPON MANAGEMENT

1. Turn the computer on.
2. Place your HOME ECONOMIST tape in the Data Cassette and rewind fully so all the tape is on the left-hand spool. Make sure Side A is facing up.
3. Type CLOAD and then press ENTER.
4. Press "Play" on the Data Cassette, as directed by the computer.
5. Then wait until the computer prints "Found:INTRO" and then the "OK" prompt on the screen.
6. Type RUN and then press ENTER.
7. The program is self-guiding from this point on.

DETAILED INSTRUCTIONS FOR USING YOUR COUPON MANAGEMENT PROGRAM

(All of this assumes you have already performed steps 1-6.)
After zeroing the counter as directed by the computer, you will see this:

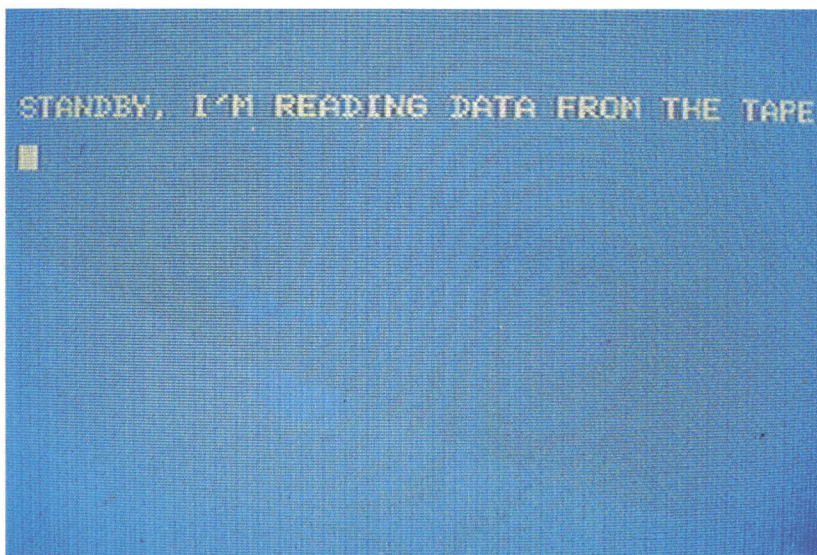

SET TAPE COUNTER TO <0>

then press <enter>

When the "OK" prompt appears, type RUN and then ENTER.

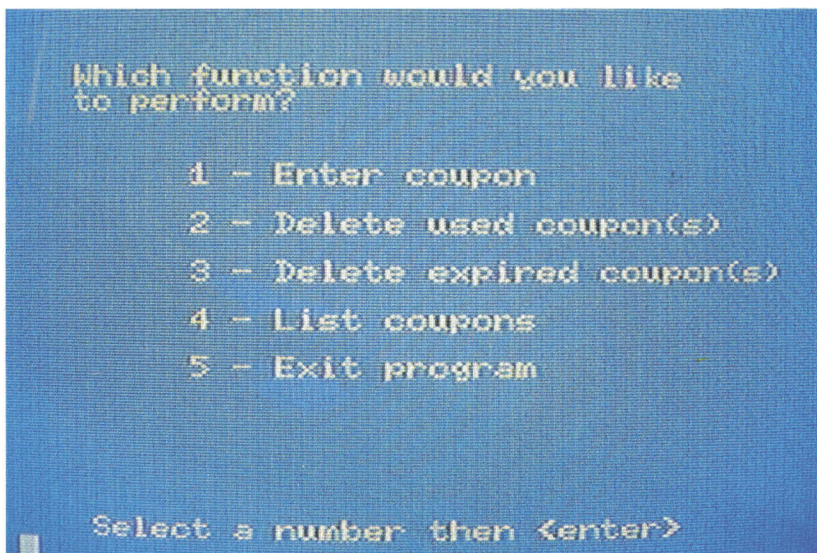

You will then see this:

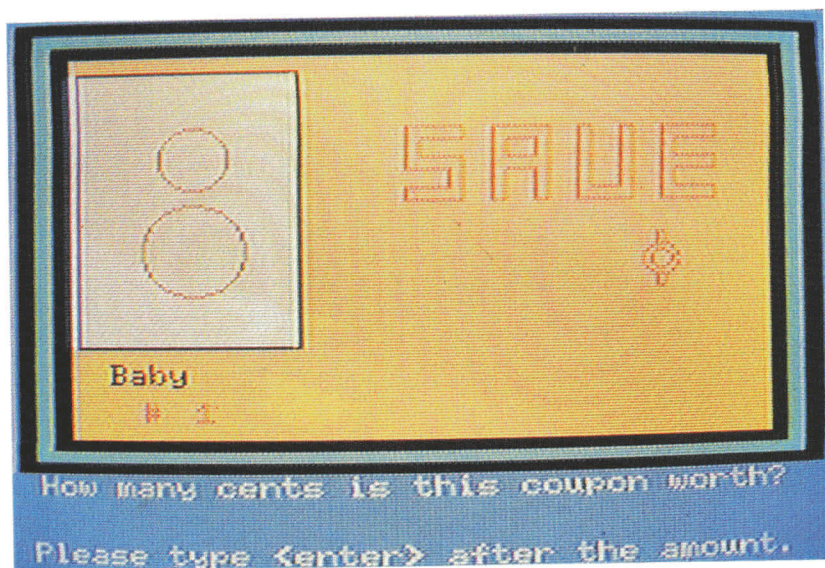

After a few moments, the computer will automatically display what we will call your "function board:"

If you press #1, you will be directed to mark your coupon.

You will then see this list of categories:

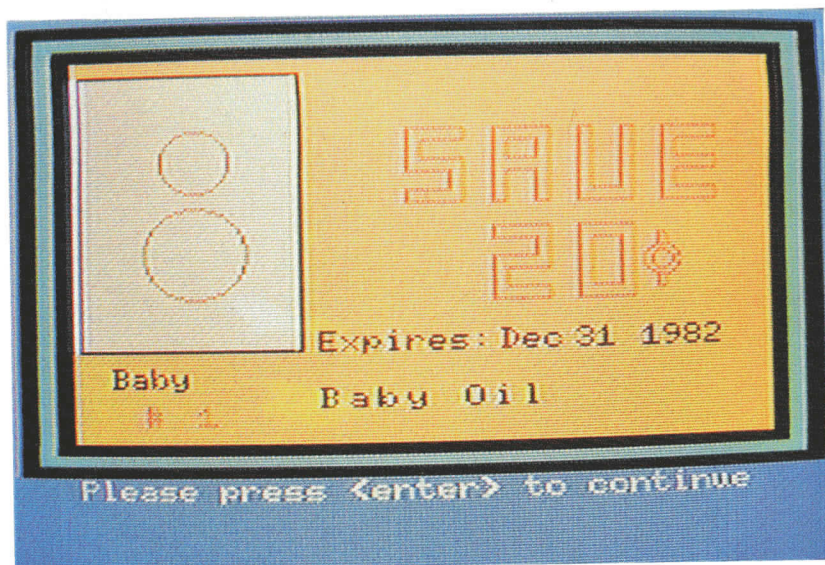

After you select your category, you will see your first blank coupon. Now, try to duplicate the coupon as shown below.

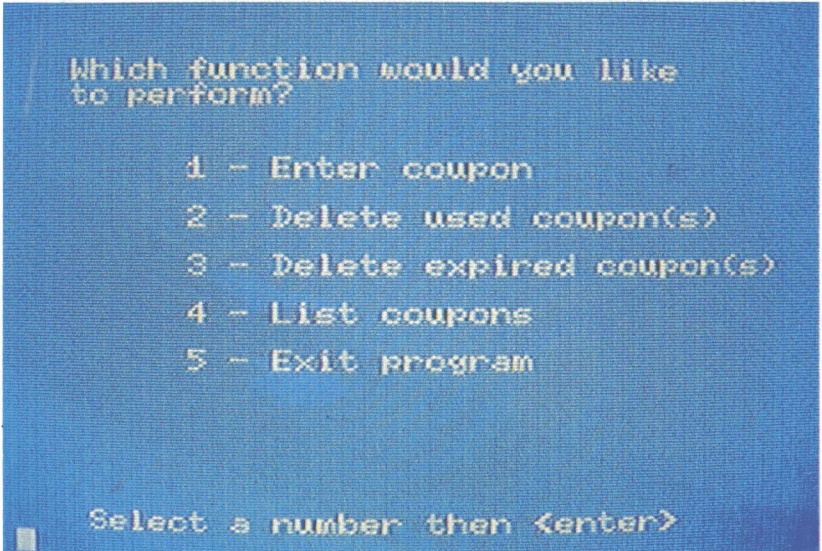

After you fill in the value, enter the month as directed (1 = January, 2 = February, etc.). Then fill in the day of the month, the year, and the brand name, size, etc. as directed by the computer.

Well, did you get the proper results? Your screen should look exactly like our coupon below.

As soon as you press ENTER, the coupon will be stored in memory for your later access. You will "fill in" one coupon like this for each coupon you possess.

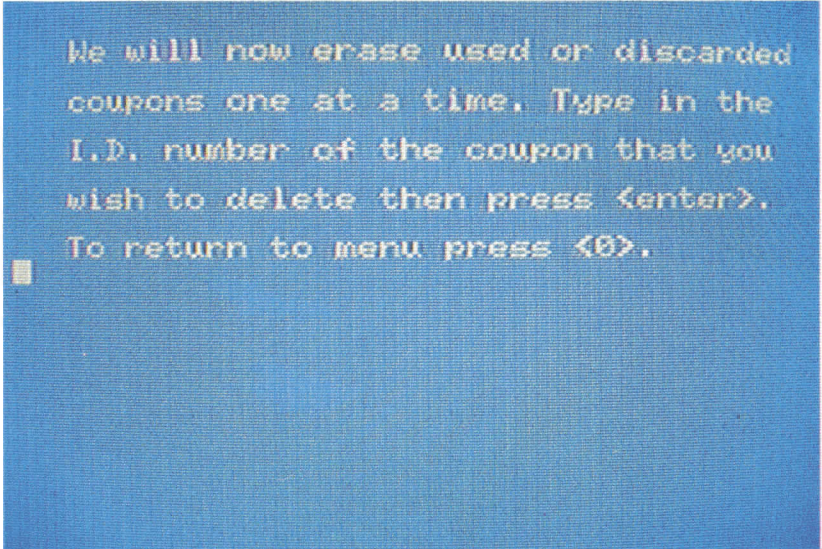

```
Which function would you like
to perform?
```

- 1 - Enter coupon
- 2 - Delete used coupon(s)
- 3 - Delete expired coupon(s)
- 4 - List coupons
- 5 - Exit program

```
Select a number then <enter>
```

You will then return to your function board (in computer language, lists like these are often termed "menus.")

Let's now try #2. You will see:

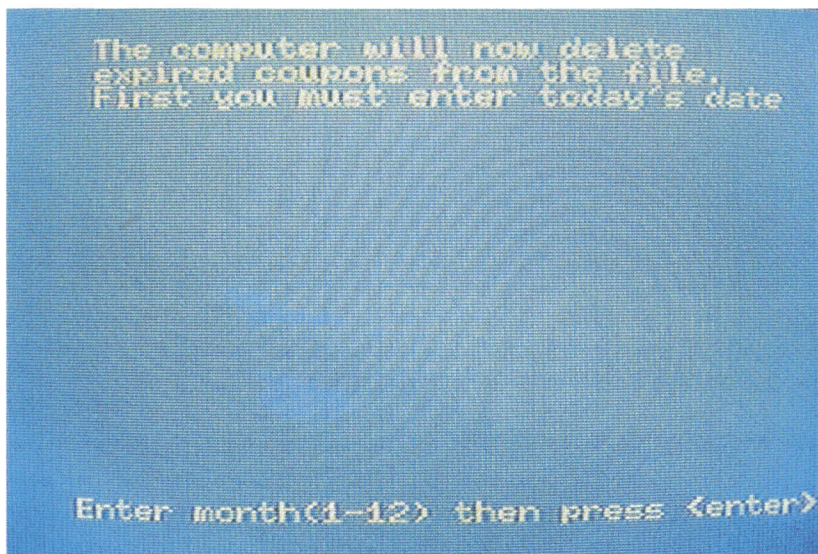

```
We will now erase used or discarded
coupons one at a time. Type in the
I.D. number of the coupon that you
wish to delete then press <enter>.
To return to menu press <0>.
```

After typing in the coupon you wish to delete, a description of that coupon will appear at the bottom of the screen. This is for your final verification, since you do not want to mistakenly delete a coupon that is still good. If you still want to delete the coupon, just follow the computer's instructions and the coupon will be erased from memory. All used coupons are deleted in this manner.

Now let's say you want to delete an expired coupon.

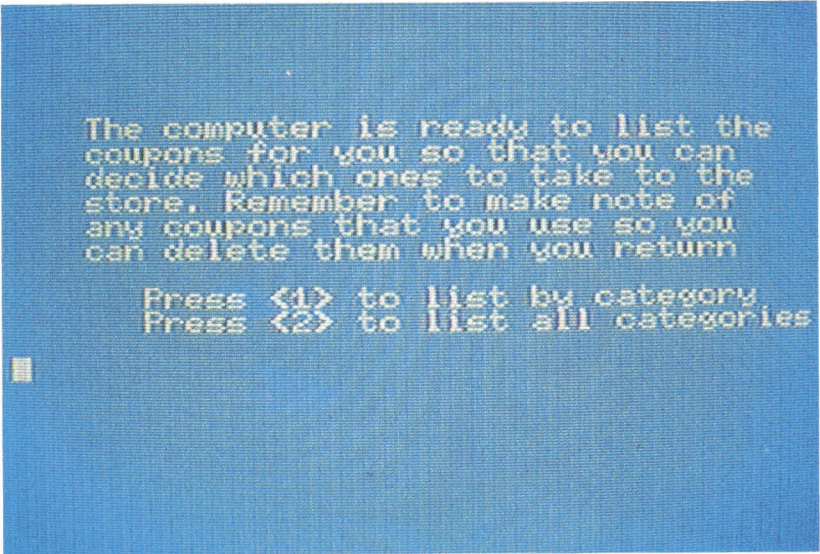

Press 0 (zero) on the computer (remember to press ENTER after every command), then press #3 and then ENTER. You will see this:

After you type in "today's date", the computer will eliminate from memory all expired coupons...like magic!

Of course when it comes time to head for the supermarket, you must know which coupons to bring along. Here, again, the computer will save you loads of time.

Press #4 on your function board and you will see:

```
The computer is ready to list the
coupons for you so that you can
decide which ones to take to the
store. Remember to make note of
any coupons that you use so you
can delete them when you return

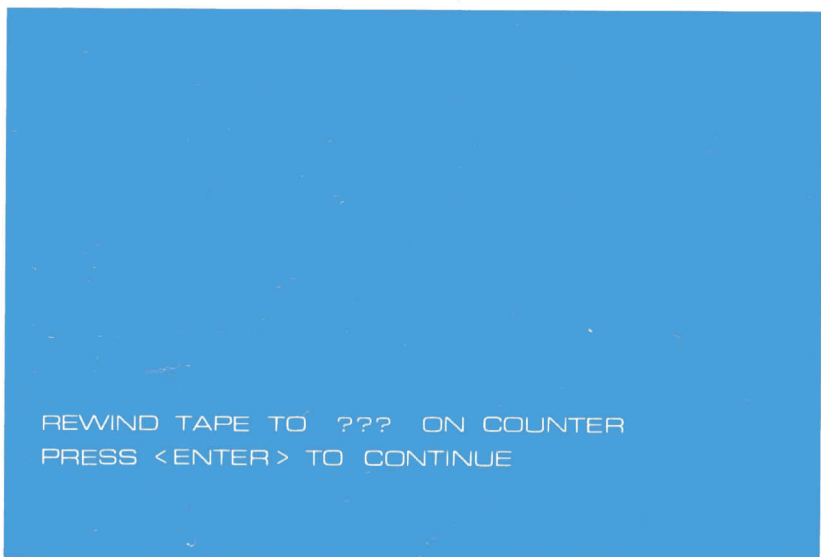

Press <1> to list by category
Press <2> to list all categories
```

Since we just erased the only coupon we entered into memory, we need to re-enter that coupon, in order to demonstrate the next point. So re-enter the diaper coupon, and when your return to the function board, press #4.

Then if you press #1, you will see a complete list of your coupon categories. Choose the category you wish to list, (in this case #1). Then press ENTER. You will then see displayed all coupons you have filed in that category.

If you press #2, you will see listed all the coupons you have on file, in the numerical order in which you filed them.

The 5th and last function you can select is "Exit Program."
When you've had enough "coupon managing" for the day, this function will update the tape (your storage device) with all the changes/deletions/additions you just made. If you press #5 on the function board, you will see this:

REWIND TAPE TO ??? ON COUNTER
PRESS <ENTER> TO CONTINUE

Then, just follow the computer's instructions.

BRIEF GUIDELINES FOR USING SPECTRA RECIPE MANAGEMENT

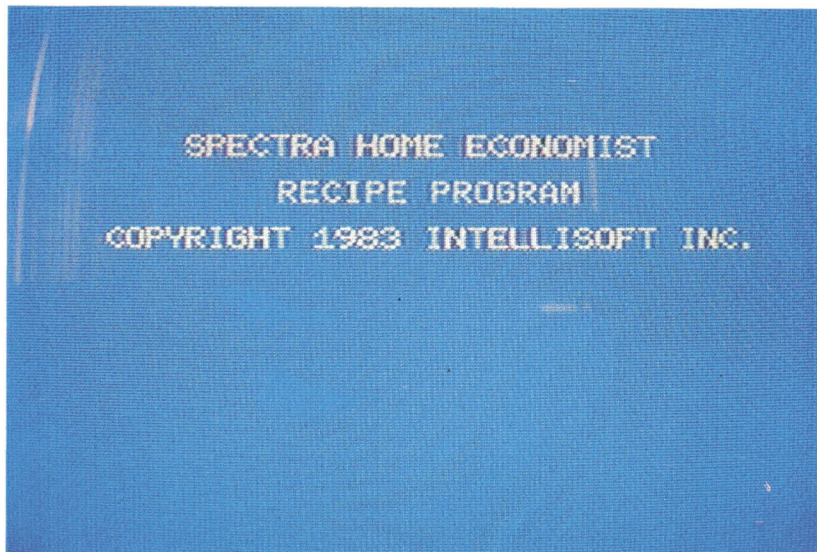

First, read the section of this booklet dealing with COUPON MANAGEMENT. Much of the instructions also apply to RECIPE MANAGEMENT. Then proceed as follows:

1. Turn the computer on.
2. Place your HOME ECONOMIST tape in the Data Cassette and rewind fully so all the tape is on the left-hand spool. Make sure Side B is facing up.
3. Type CLOAD and then press ENTER.
4. Press "Play" on the Data Cassette, as directed by the computer.
5. Then wait until "Found-INTRO" and then the "OK" prompt appear on the screen.
6. Type RUN and then press ENTER.
7. The program is self-guiding from this point on.

DETAILED INSTRUCTIONS FOR USING YOUR RECIPE MANAGEMENT PROGRAM

(All of the following assumes that you have already performed steps 1-6.)

After zeroing the counter on the tape deck, you will see:

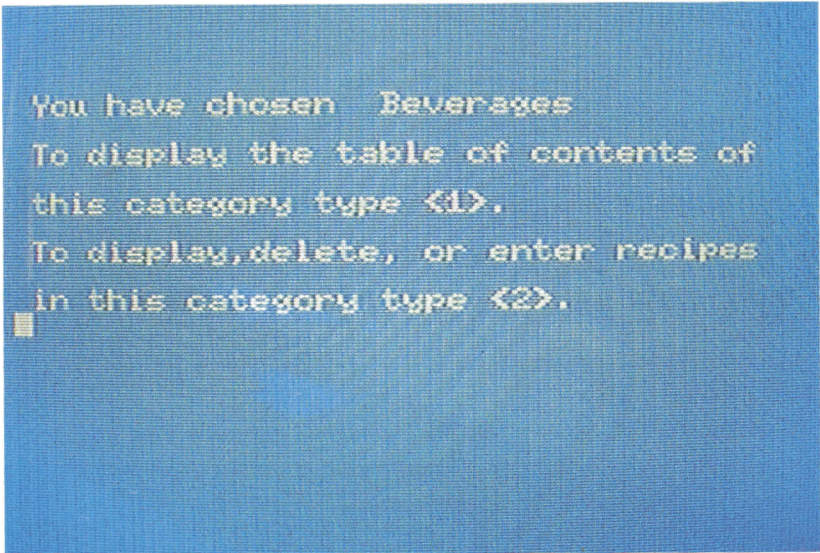

When the OK prompt appears on the screen, the tape will stop automatically (the computer actually stops and starts the tape several times while you are using either of these programs). This OK prompt means you should type RUN and then ENTER.

After a few moments, the computer will print out your "Table of Contents," the various categories you will have to work with.

At this point, you can choose the category you desire. Let's choose Beverages.

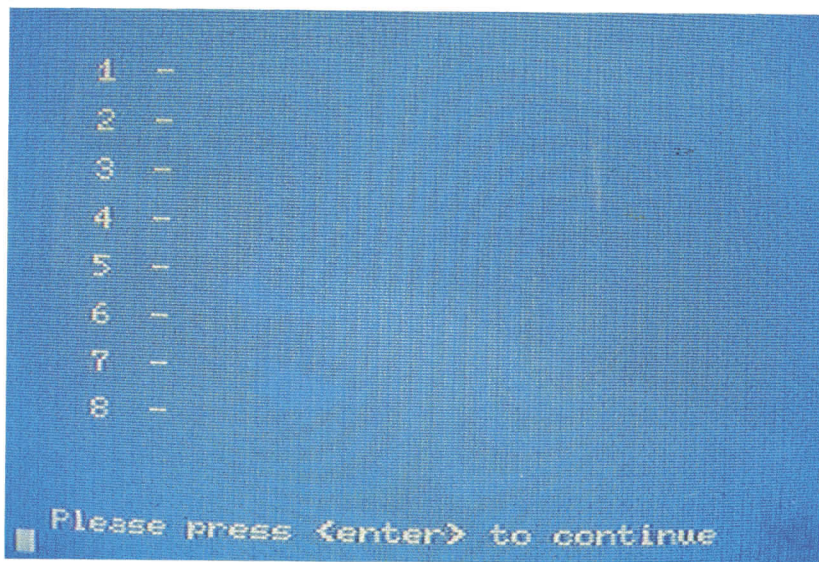

The computer will then tell you that you have two options. You will see:

```
You have chosen Beverages
To display the table of contents of
this category type <1>.
To display, delete, or enter recipes
in this category type <2>.
```

Let's first look at what will happen if you press #1.

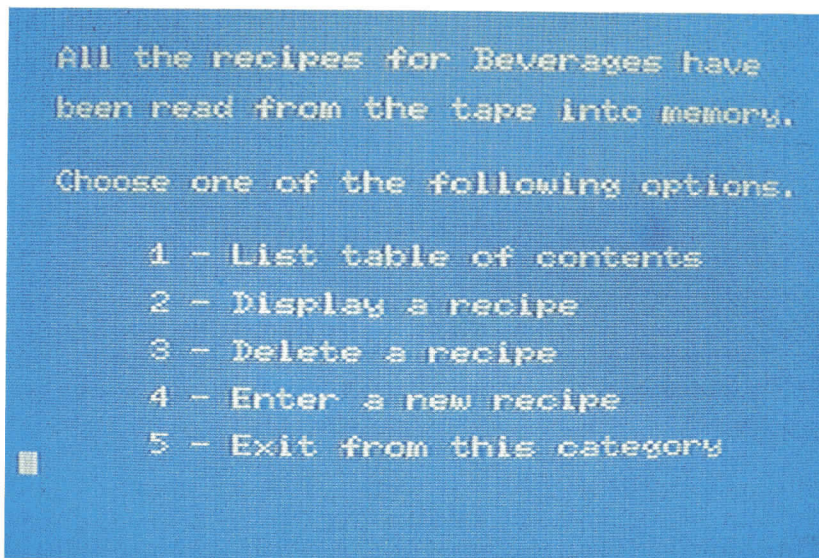

Well, nothing really. That's because you haven't yet entered any recipes into memory. Later, when you have done so, their titles will be shown in this format.

So let's press ENTER and go back to our Table of Contents. Press #1 for beverages. But this time, let's choose option #2.

As indicated, you should now advance the tape (using fast forward to save time) to 25, approximately where the beverage file is located. Then stop the cassette, press "Play", then immediately press ENTER.

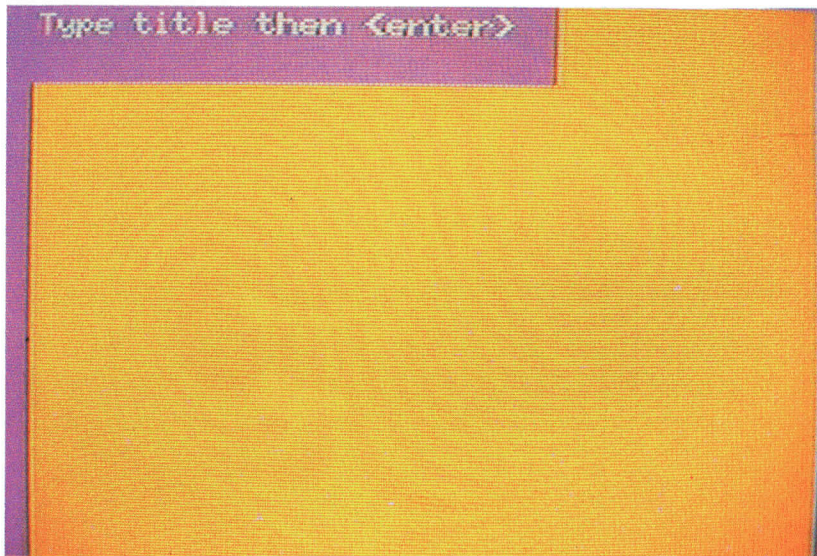

In a few moments you will see this option screen:

Since we have not entered any recipes into memory yet, there would be no point in choosing 1-3. So let's select #4 and see what happens.

You are now presented with your very first electronic recipe card! It's at your disposal, so follow the computer's instructions for filling it in.

(Don't have a beverage recipe at your fingertips? Then use the one on this screen to practice with.)

Well, did it come out looking like our screen? In case you got tripped up somewhere, here are some things to check on.

First, when you type the titles, you only have 14 spaces (2 lines, 7 spaces each) to work with. Luckily, Banana Daquiri fits into these parameters. If it's a long title, you'll have to somehow abbreviate it.

Your spaces are also limited for ingredients (10 spaces), quantity (4), and units (5). That's why we used jigge to abbreviate "jigger" and cr. ice to abbreviate cracked ice. You, too, will easily be able to think up appropriate abbreviations and the space limitations will pose no problem.

One other thing: When you see Directions (\$) (ENTER), it means you can press the dollar sign on the computer to move from listing ingredients to writing out the directions.

Oh yes, there's still one other possible stumbling block. When you get to quantity, you must press a number in order for the program to continue. But if there are no units (such as with banana), simply hit the space bar and then ENTER to continue. The unit for that particular ingredient will remain blank.

We're not quite done yet. We must indicate how many people this recipe serves. This recipe accommodates only one, so type in #1. Then press ENTER. This tidbit of information will help the computer—and us—later on.

Now we're back to the option screen (or function board, or menu, as we've also called it in this instruction manual). This time, let's press #2. This again shows what recipes are filed under Beverages, but now you can retrieve the specific recipe you want. Press #1 then ENTER.

Banana Daquiris, anyone? Retrieving a recipe from memory is this simple!

Now, remember that you filled in the serving size before?

You'll be glad you did, because now the computer will automatically and instantly figure out the correct amounts for a larger (or smaller) concoction. Press #4 then ENTER.

The computer saves you guesswork, and serves you up the exact quantities for this larger portion. It tells you just how much of everything to add to relieve 4 thirsty customers. It would also automatically cut a recipe if you needed to make a smaller portion.

Press ENTER to continue, and we're back to the option screen. Press #3. Follow the simple instructions the computer gives you, and Banana Daquiri will be deleted from your "new recipe box!"

Now let's press #5 to see what happens. This is pretty much self-explanatory, and if you've already read the preceding section on COUPON MANAGEMENT you will understand what this function is for.

That's all there is to it! If you now rewind the tape and start all over, you will have a clean slate, since you erased the only recipe you entered into memory. Of course if you had typed in more recipes and not erased them, you would be able to easily retrieve them, following the preceding instructions.

We hope you enjoy your RECIPE MANAGEMENT program. And if you were smart enough not to erase Banana Daquiri, we hope your first toast is to SPECTRAVIDEO!
