NEW ZEALAND

Congratulations on buying a Spectravideo personal computer. We are sure that you will enjoy the purchase of New Zealand's no. 1 computer for price vs performance. It will give you hours of fun and happy computing.

To help you to get started we have developed this introduction program which will show you what the computer can do for you. It isn't a course on computing or programming, but just an introduction to the computer keyboard and the features the SV1318/328 has. You will still have to read the manual that comes with it and/or take a course in programming if that is what you're after.

LOADING INSTRUCTIONS:

1. Make sure you have connected the computer correctly to the data cassette, power supply and TV or monitor. (Refer to the manual)
2. Turn on the power and tune the TV to the Computer. We suggest you use a free channel so you don't have to retune every time.
3. Wait until your computer displays the 'OK' sign on the screen.
4. Put the tape into the data cassette and type "CLOAD" followed by pressing the 'ENTER' key.
5. Follow the instructions on the screen (press play; key).
6. When the 'OK' sign appears again press either the 'F5' key or type "RUN" followed by pressing the 'ENTER' key.

IMPORTANT: Leave the tape in the data cassette and leave the 'play' button down.
