

SPECTRAVIDEO USERS GROUP -- Wgtn

Newsletter Number 16 -- November 1985

The next meeting is on Monday, November 18th at 7.30 in the Staff Common Room, Wellington Clinical School, Mein Street Newtown.

There will be a tutorial at 7.00 covering methods of data storage.

Wellington SV Users Group

Secretary Darryl Alison Ph 85522 (Paraparaumu) 058

Treasurer Ross Fletcher

Newsletter Committee

Steve Hanson 729459 (work)

John Matthews 327805

Committee members

Darryl Alison

Garry Clark 367872

Dennis Timmons 837200

Specific areas of responsibility for committee members are ...

Garry -- Radio Access & public domain tape software;

Dennis -- Library;

Darryl -- Program evaluation committee chairman & Kapiti users representative.

Club Subscriptions

The club subscription is now \$15.00/year.

New members this month include Andrew McAlpine and Darren Stankovitch.

Note that expiry date for subscriptions is printed on the address label of newsletter. Subscriptions not renewed a month after this date will not receive newsletters from then.

Newsletter

Thanks to John Matthews and Steve Hanson who have agreed to act as an editorial committee for the newsletter. We need at least one more person to do this as well. The suggestion has been made again that the newsletter become 6 weekly or 2 monthly bumper issues which the committee will consider.

Don

Newsletter Contributions

If you are submitting programs to go in the newsletter they MUST satisfy the following conditions or they will NOT be printed.

- 1 ... be typed/printed on A4 paper with about 5 lines left blank at top and bottom of page and an inch at least around the sides
- 2 ... typed with a dark ribbon OR printed using emphasized print mode
- 3 ... include a description of what the program does , typed on A4 paper with example input
- 4 ... In the case of programs above 20 lines in length they should be sent on cassette , in this case there is no need for the printout as I can merge them into the newsletter. Enclose a stamped addressed envelope for return of cassette
- 5 ... line numbers should be continuous -- do a RENUM before printing the programs
- 6 ... PLEASE MAKE SURE THEY WORK . and would readers please note that I am NOT responsible for programs sent by people which do not work .
- 7 ... In the case of screen dumps from 3d plotters please indicate the function used and try to get the print as dark as possible -- not always easy I know .

All other newsletter contributions should be sent to P.O Box 7057, Wellington South - The Editor. They may miss being printed for a month if sent to User Group box or given to anyone else. Articles should follow 1 and 2 above.

Deadline for Newsletter articles is the meeting night each month.

Please follow these guidelines, articles with a 4mm edge all around can not be printed , and neither can articles produced on a dot matrix printer with low resolution . They are simply unreadable after photocopying.

The ZORK assistance line ...

to escape an attack from great flying vampire bats, try looking in your lunch sack.

Photocopying from Library

Anybody requiring articles from the library to be photocopied please send request to the LIBRARIAN, not any other committee member. We have had problems with articles not being copied when requested, please ensure that requests go to the librarian.

Also membership renewals should be sent to Box 7057, not to any other box, otherwise it is possible that the mailing list will not get updated.

Discounts for members .. All discounts offered by The Computer Experience and Microstyle Computers do NOT include hardware. Discounts may be offered on such peripherals as floppy disks, cassettes, books, furniture, printers, monitors but NOT on SpectraVideo hardware. Individual dealers may not offer all the goods above at discounted rates, inquire from the shops just what discounts are available to club members. Note that to obtain a discount on any goods you must produce your current membership card.

Palmerston North Subgroup

The Palmerston North subgroup are holding meetings on the 1st Monday of each month at THE COMPUTER EXPERIENCE in Palmerston North.

Club Sponsors

The Computer Experience -- 177 Willis Street, Wellington

MicroStyle Computers -- 29 High Street, Lower Hutt

Public Domain Software

1) Do NOT send us blank tapes. We will supply a standard tape which will get round the problem of people sending tapes which are too short.

2) The cost of tapes will be \$3.00 each and we will also have a charge of \$2.50 to cover handling and return postage. This is charged for each separate lot of copying done, not per tape. At present we have 4 complete tapes.

3) Any of the PD Software may also be broadcast on Radio Access in our 5 minute slot on the first Saturday of each month.

4) The tapes will contain combinations of cassette & disk programs, some may be set up for 80 columns. Adapt them as you wish to suit yourself.

5) Send orders with payment to PDS, P.O Box 7057, Wgtn South, Wellington. Make cheques payable to Garry Clark.

6) Send us your public domain software for inclusion in the software library.

CP/M public domain software has arrived from the United States Osborne group.

People wanting CPM public domain software please write to Deane Whitmore at the Taranaki Users Group who have a large range of CPM pds software. Send formatted CPM disks and a stamped addressed envelope, state any specific interest and please give them a couple of weeks before you start moaning about not having received them. Address is 3 Lombardy Place, New Plymouth.

Odd News

The Hamilton User Group has developed SVI disk BASIC to allow it to access double-sided disk drives.

Public Domain

Recently arrived from Auckland is a new Sweep program. Slightly different to the old, this program runs under CP/M and provides an easy environment for copying files to various Users, deleting and renaming files using wildcards, squeezing files to save disk space and viewing files, including Wordstar and squeezed files.

Also now available is a library utility, which enables the saving of multiple files and programs to one file on disk, from which they can either be extracted or run direct. This saves disk and directory space and enables easy location of files of common interest.

Question & Answer

Does anyone know how to switch on the function key display from CPM ?

Ques: How do you switch memory banks in CP/M ?
Jeff Kavelaars of Hillcrest, Auckland writes:

Dear sir

Perhaps you may be able to help me with a few problems. When I am running on CP/M 2.2 and I am writing a long diary which needs more than 25000 bytes available memory on my SPECTRAVIDEO 328, how can I switch to my 64K expansion banks on my 64K expansion card (SV-807)?

I know there is a "SWITCH" command in BASIC, but what is it under CP/M-80 2.2?

Ans: It is possible to switch banks in CP/M by using a small machine code program (a .com file), but this does not achieve much. When CP/M boots off disk, the BASIC ROMs are switched out and extra RAM is switched in. This gives 56K free with CP/M present. This is the maximum that can be made available, as 8-bit machines can only access 64K of memory, switching only means that you will move into another area of 64K exactly the same as the one you left.

Jeff also asks about the "CO-16 Attached Resource Processor" which he read about at a computer show in Henderson. This is the device mentioned in the September 85 newsletter which enables the linking of a 16-bit coprocessor to a Z80, giving access to 256K of ROM/RAM and the running of MS-DOS programs. As the CO-16 does not rely on any machine dependant factors other than the Z80 chip itself, it is quite possible that it will work on an SV-328.

Notes from Last Meeting

It seems the pressures of Christmas are showing already! We had a "Mass"(?) turnout for last meeting - but nevertheless THINGS HAPPENED!

Colin presented the club's financial report - included elsewhere in this issue.

Ross Fletcher has agreed to act as treasurer, as Colin no longer has the large amount of time this job requires.

John and I have agreed to produce this issue of the newsletter (but would still appreciate another member to join our committee.)

John Durham of Modec Instruments Ltd. demonstrated his pride and joy "Specmon" - a Monitor cartridge designed specifically for the Spectravideo 318/328 computers - which is reviewed elsewhere in this issue, and also Bee-mon, a CP/M disk based monitor.

John Durham also repairs Z80 based hardware - so IF it don't work - give his work a ring.

C'mon folks, let's have a better turnout next meeting!!

Action Computers

SVI / MSX software specialists ... P.O Box 7442, Wellington

Action Computers (formally Total Computer Solutions) announce the release of five new programs:

Graph Presenter - displays and prints Histograms, Line, Pie and Bar Graphs and allows editing and saving of data.

Graph Plotter - two dimensional plotting and numerical analysis.

Super Artist - a sophisticated artist system, not available for MSX.

Sprite Animator - a sophisticated sprite animation and rotation system.

Identity Quest - an adventure game guaranteed to give hours of enjoyment.

Programs can be ordered by writing to:

Action Computers

P.O. Box 7442

Wellington South

Programs are \$24.95 + \$1.50 postage and packing.

Action Computers are also specialising in CONTRACT PROGRAMMING -- with over 5 years experience in SAS as well as DBASEII, PASCAL, BASIC and Z80 assembler and IBM mainframe systems (CMS/MVS/TSO) .

Send us your own titles for evaluation and possible publication. Write to Action Computers Box 7442, Wellington for further details

((<----- Programmers / Consultants ----->))

--- Don Stanley / Garth Thornton ---

COMMITTEE MEETING

Due to a heavy workload, Colin has resigned the Treasurer position and Ross Fletcher has taken over. The treasurers report has been presented to the committee and at the last club night and is in this newsletter.

In the last newsletter I stated that the Treasurers report was first requested in March. This was correct, but the report was to be produced in June. If the last newsletter implied it was due in March then I apologise to Colin for that.

The New Committee is shown in the front of this Newsletter.
Don

Odd things -- By Don Stanley

TRY THIS ...

```
5 Defint I,J : Defsng A
10 Dim A(768)
20 Screen 1
30 Line (130,10)-(160,180),10,bf
40 For I = 1 to 768
50 A(I) = Vpeek(I + &h1800 -1)
60 Next
65 For J = 1 to 10
70 For I = 1 to 256
80 Vpoke I + &h1800 - 1, A(I + J)
90 Vpoke I + &h1800 + 512, A(I + 500 + J)
100 Next I,J
```

This program just rotates the name table of the video ram, which (in machine code or turbo) provides a simple scroll. The above program, being in Basic, is somewhat slow. The idea is that you just replace each element in the name table by the following element. The scroll in machine code is very quick.

Turbo Pascal

The new price for TURBO from Tom Johnson at South Auckland Computers is \$215.00, less 10% to users group members. Tom's address is P.O Box 720, Papakura, Auckland. Turbo is well worth getting for the ease of high level programming available and the extra sophistication and speed over BASIC is exceptional.

Cassette Users

Using OPEN: Data is written to the cassette every 255 Bytes, or when a CLOSE statement is encountered. Ensure you have a CLOSE when you have finished writing a data file. If you remove the tape without a close, you may lose up to 255 bytes ie those left in the file buffer.

Dear User Group,

22 October 1985

Re: PRE-CHRISTMAS SPECIALS

The attached brochures will give you information on the following specials which currently represent very good buying.

DISK DRIVES

SA300 - 3 $\frac{1}{2}$ " S.S.DD, 500Kb. Plug compatible with 5 $\frac{1}{4}$ drives.
\$259.00 + 10% TAX
SA465 - 5 $\frac{1}{4}$ " Half Height 80TK DSDD, 1.0Mb. Can be covered
to run at 40TK. (Switchable) \$369.00 + 10% TAX
SA712 - 5 $\frac{1}{4}$ " Half Height 10.49Mb formatted winchester. Has
high and low power start options \$910.00 + 10% TAX

MONITORS

ZVM-122EA - Zenith 12" Amber monochrome monitor, composite
video input, 80/40 character per line switch.
Includes tilt base. \$279.00 + 10% TAX
ZVM-133E - High resolution RGB colour monitor 13" screen.
\$999.00 + 10% TAX

PLOTTERS & PRINTERS

FPL2000 - A3 and A4 4 pen plotter, serial and parallel
interface as standard. \$690.00 + 10% TAX
FT5002 - 120 CPS Dot Matrix Printer, friction and tractor
feed, "NLQ" and proportional print switchable from
front panel. Parallel interface standard, serial
optional. \$590.00 + 10% TAX
WP-550 - 14CPS Daisy Wheel Printer, 15" (132 col) paper
width, friction and tractor feed, Parallel and
serial interfaces as standard. \$795.00 + 10% TAX

INTERFACES

UNIPRINT Commodore Full Graphics \$99.00 + 10% TAX

ORDERS TO

GENERAL MANAGER

Computer Distributors Limited

46B, TAHAROTO RD, TAKAPUNA, AUCKLAND, NEW ZEALAND. P.O. BOX 31355 MILFORD. PHONE 495-809, 495-624. TELEX 60206.

PRESS RELEASE

=====

Computer Distributors Ltd., is pleased to announce the release of a new model MSX computer onto the New Zealand market:

SPECTRAVIDEO SVI-738 X'press

This exciting new computer has several built in features, such as a 3.5" disk drive, 80 column for monitor AND TV, RS232, centronics printer interface and 4 application software programs. It comes complete with MSX Basic, MSX-DOS and CP/M.

The X'press is 100% MSX compatible and is aimed at the advanced home and small business market, for which a second 3.5" disk drive (the SVI-787) will be available as well as the MicroPro range (Wordstar, Calcstar, Datastar, Mailmerge and Reportstar) and other CP/M business software.

The X'press will retail at \$1195.00, the add on 3.5" disk drive at \$795.00.

With the release of the X'press Computer Distributors Ltd. has also adjusted the retail prices of other Spectravideo products:

NOW:

SVI-728 MSX Computer	\$695.00	\$595.00
SVI-707 MSX 5.25" Disk Drive	\$995.00	\$795.00
SVI-328 Single Disk Pak	\$1950.00	\$1750.00
SVI-605 Single Disk Expander	\$1375.00	\$1195.00

VIDEOTEX FOR SVI. ?? COMPUTEX

A Videotex service dedicated to Microcomputers has been announced by Computex Systems. The service called Computex went into operation on 1 October, and is based on the Aditel Videotex service run by BPI Systems Ltd in Wellington (as a Closed User Group).

The service is a joint venture between Bits & Bytes, publishers of the well known PC Monthly, and a group of Christchurch Business people known as Recom Enterprises.

Initially, the service caters for Commodore, BBC and Apple computer Users, but is expected that the system will rapidly be able to cater for other brands.

Features include software program transferal via phone line, computer news, software and hardware assistance, on line games, an electronic noticeboard (BBS or Bulletin Board Service), electronic mail, new product information, teleshopping and teleconferencing.

Computex have written to the SVUG (Wellington) offering us 4 pages of screen information - and despite approaches by the former Group Treasurer for support from CDL for nationwide support on behalf of all SVI users, no commitment nor any indicative support has been advised from CDL Headquarters.

And as the NZSVI Users Assn. has yet to meet, the subject of the use of Videotex as a means of both teleconferencing and electronic messages has been unable to be placed on the Agenda.

Meantime, if any SVUG (Wgtn) member, anywhere in NZ - or members of other SV Users Group or groups interested in either exploring or supporting a Special Interest Group - then please contact me immediately. My address is:- Colin Chin, Videotex Group, P.O. Box 2197, WELLINGTON. (Ph (04) 32-5656). I can also be reached by electronic mail on the following Videotex databases:-

ICL Bulletin: 200063 BPI Aditel: 7213102

BNZ Teledata: Douglas Chin Limited

Ideally, if all SVIUG's around N.Z. agree to support Computex, the costs of a \$75.00 registration fee can be split down to nearly a once-only \$15.00 each, and this enables four pages or frames of information on Computex can be shared on computex for all PC users or subscribers. Extra frames are available at 40c per month with pages to be designed or changed as often as necessary.

More details can be supplied, on request as I hold a large amount of material on the Prestel-based Videotex 1200/75 Baud rate. In addition, toll calls to Australia and the UK will access Viatel and Prestel respectively. Both these services have NZ agents, BPI Systems.

Perhaps, in the future, a directory of Videotex users within the SVUG will be available. Currently, there are 3 members known to subscribe to ICL's Bulletin (on Folio), and 4 SVI Dealers subscribing to either Bulletin or BPI's Aditel.

Continued on page 16

Review SPECTRON Monitor

The Bouquet.

1. The memory dumps to screen, in ASCII, Hex or Symbolic dump form work well.
2. All the commands which concern manipulation of memory such as (M)ove, (I)nput from port, (O)ut to a port, e(X)change blocks of memory etc perform as specified.
3. The various commands for finding a byte, opcode, hex string, ASCII string, or an address (or range of addresses) have been well designed and will be useful for debugging programs.
4. By using the #6 function key you can reboot into basic or CP/M.
5. POKE 65289, 199 will get you back to SPECTRON from basic.
6. There is a versatile tape load/save system which allows for interchange of programs between 5 makes of computers, (see note 2 below).

Brickbats.

1. (K) option (send text to crt/memory/printer) or any form of printer output sends a carriage return but no linefeed to my printer thus each line of text is printed on top of the first. Although I can set a dipswitch inside the printer to provide a LF/CR combination this would give a double line spacing for normal printer use, and who wants the hassle of taking the top off the printer each time?
2. Page 15 mentions a circuit diagram; 'Fig 1', the "Spectravideo Multipurpose Conventional Tape Input Connector" but there are NO diagrams. (There is a 'Fig 2' mentioned too)
3. The instructions say "This command (S) recognises and decodes all the unpublished Zilog instructions as listed in your Specmon instructions". Where?
4. What is the difference between options 1 & 2 (apart from the sign-on message) and how do you invoke one or the other?
5. The first command I tried was trace (T) and it got as far as the second opcode (LD SP,FFFD) and hung up in a loop. Subsequent tries showed that it did this on all 3-byte opcodes, (JR, JP, CALL &c)
- Note: You cannot trace the basic ROMs as they are switched out.
6. After using the cartridge for some time, with various commands the function key setups no longer worked.
7. The same thing happened to the number keys along the top row of the keyboard, the numeric keypad still worked, but 318 owners don't have that!
8. Error trapping on most of the commands worked well but the (Z) command, if entered without fields, or only the start, sent garbage to the printer instead of filling memory with nulls. If no printer is connected then only a reset will get you out of the lock-up. (Hint - When in Basic : IF (inp(18) AND 1)=1 then (printer is not switched on/connected))

USELESS TRIVIA DEPT.

CLEAR 0, \$h82BB gives the maximum amount of protected memory for your machine code program, and allows just enough room for this BASIC program:-

10 ??I LOVE SPECTRAVIDEO?

The addition of just one character to the line eg '!', will give an 'OUT OF MEMORY' error!

In fact there isn't even enough room to do another clear to restore the normal String space (200) or ransp (\$hD2C8 for 328 DOS).

A 'NEW' command will allow you to enter '?FRE(0)' which returns 146 bytes free (no string space) and you can then enter CLEAR 200, \$hD538 to restore the normal BASIC environment.

Bob Curwood,
Spectravideo Users Grp (Christchurch)

Thoughts.

The main reason I was interested in this program was to trace through the Basic ROMs (I'm a hacker from way back!) but that isn't possible with the present version. This cartridge would be very useful to anyone owning a TRS80 / PMC80 / System80, Microbee or Colour Genie as well as a Spectravideo to allow swapping of programs (but note you will need the missing 'Fig 1' for anything other than Microbee M/C programs). Obviously, some of the memory shifts or loads I did while testing overlaid the stack / function key area / keyboard buffer or the number key definitions at &hFC1E and thus upset the operation. The scratchpad area is from &hFAC0 to &hFFFF and you should try to avoid loading a program or doing a block shift that will extend into this area as it is not protected like the Basic one.

Conclusions.

I can recommend this cartridge but with some reservations.

- A. Its price (NZ\$95)
- B. The bugs mentioned above. In particular the provision of a LF with each CR sent to the printer should be available or optioned.
- C. Maybe the cartridge I tried was only a pre-production one (the single EPROM inside was mounted in a standard socket which prevented the case halves from closing properly) and the version on sale will have the chip soldered-in or in a low-profile socket?
- D. There is no assembler, surely the No 1 requirement for a monitor program.

I look forward to Version 2.0

Reviewer:-

Bob Curwood
Spectravideo Users Group
(CHRISTCHURCH)

Test Cartridge Provided By:-

Custom Computers Ltd, of Christchurch
kindly lent a SPECMON cartridge for
this review.

Editor's Note:-

We have contacted John Durham, the designer of SPECMON who confirmed that the distributors were advised of an updated version of SPECMON some time ago. All new cartridges from the distributor will contain the updated ROM version. (The review cartridge was an earlier version).

With specific regard to the 'Brickbats' mentioned above:-

- 1. The (K) option was principally for entering text into memory. Including printed output was an additional feature designed with the majority of printers in mind ie those which automatically (or can be programmed to) assume a linefeed with every carriage return. The suggested option has been noted. It is always possible to send a LF character from the keyboard (Control-J = ASCII &h0A) with each CR character.
- 2 & 3. All figures and attachments were sent to the distributors. NB. The users group has the SPECMON instructions complete
- 4. The options (from the front page of the Instructions) are:
 - A. Power-up without touching any key - activates the SPECMON cartridge.
 - B. Power-up while holding the SELECT key down - loads SPECMON to operate 'RAM resident'.
- 5. This Machine Code Bug was corrected in the updated version.

6 & 7. As suggested by Bob, the function key and keyboard details are held at the bottom of the scratchpad - any incursion into this area will have unpredictable results.

8. The (Z)ero Memory command is intended to be used with the appropriate fields complete. (John is however investigating this feature).

D. SPECMON is a 'Monitor' ie a memory manipulator and disassembler not an 'Assembler'.

If anyone has an earlier version of SPECMON, John suggests contacting your Distributor to obtain a swap for your EPROM. If they are unable to do so, contact John Durham c/o Modex Instruments Ltd, Upper Hutt.

Crossword

Here are the answers to last months cryptic/normal crossword. Also question number 3 --> should read "this functions like a lettuce" and question 16 <-- should be 17 <--.

TREASURER'S REPORT

The financial activities of the inaugural year relating to the Spectravideo Users' Group (Wellington) reflect the true national situation of Spectravideo 318/328 within the Home Computer market.

In other words, whereas other PC brands enjoy a higher profile in the market place, they do not necessarily enjoy the strides made by Spectravideo owners/users. Already, home grown commercial software are starting to appear on the market unprompted by events in America. This has been brought about by dedicated users whether professional or hobbyists.

Shortly, the dedicated "transportable" SV738 Express will appear on the market which is fairly close to being compatible with the 328/318.

A library of Public Domain Software has been made available via Radio Access, and the fast baud rate of the SV enables something like 9-10 programmes to be available via radio receivers in five minutes. It is hoped that with the available of telecommunications via Videotex/Post Office telephone lines, that these will be able to be downloaded anywhere in New Zealand. All that is needed is the driver software and a modem suitable for split baud rate. Already Computex (via the BPI Aditel database) provides the first part necessary for telecommunication.

With over 150 members, the SVUG (Wgtn) has ended up with a surplus on the financial year of \$318.34. It is hoped, however, that the Donation promised by the national distributors will be forthcoming soon. This amount together with amounts owing from our supporting advertising in our Newsletter will provide us with just the amount required to keep our standard of Newsletter content.

Already, we have subscribers/members as far away as Holland, Australia who eagerly await each Newsletter. With the change of editors, it will be hard to maintain the high standard that Don set. However, we do have an exchange with groups in Canada, Australia as well as the Waikato, Auckland, Christchurch - so we wish all the best to John Matthews and Co.

Our meeting hireages of \$1.00 per member voluntary on club nights did not meet the initial success as members conveniently "forgot" the effort. However, the increased subscription was agreed to cover this point.

Also, the Family Evening was, regrettably, not supported by all members. A great pity, as it was thoroughly enjoyed by all those who attended. Our keen juniors and families, as well as wives, had a great evening. Whether or not, another one will be held, it will be difficult to say.

In retrospect, may I thank all those who contributed to my own pleasure of being a member. I've met and made many new friends, and don't forget see Dennis Timmons for Australian and Canadian Newsletters - also, we've recently received a lot of Ck/M software which has been put into our Public Domain Library.

Colin H Chin (Treasurer)
