

S P E C T R A V I D E O Users Group (WGTN) .

NEWSLETTER NUMBER 5 OCTOBER 1984

The next meeting is on MONDAY , NOVEMBER 19 , at 7.30 in the STAFF COMMON ROOM, Floor D , Wellington Clinical School , Mein Street , Newtown.

The following meeting is on December 17 at the same venue and time . There will be no meeting arranged for January.

Wellington SpectraVideo Users Group

Secretary .. Don Stanley
c/- Epidemiology Unit
Wellington Hospital
ph 855999x5958 (wk)

Treasurer ... Colin Chin
P.O Box 2197
Wellington

Notes from meeting of 19-10-84

The concept of a national committee of users groups was discussed at this meeting . CDL have prompted this idea in order to attain closer liason of groups and prevent doubling up of research efforts. (eg both Taranaki and some of our members have produced manuals -- they take a different slant , Taranaki's is technically oriented , ours is directed at Basic -- but had both groups known of the others efforts there could have been liason and perhaps a single comprehensive manual produced)

We have agreed that such a committee is desirable and have elected Ross Wakelin as our group representative on this committee .

A letter was presented from CDL in which they have offered the club an ANNUAL subsidy of \$100 and made comments about the national committee. The subsidy was accepted.

A letter from ALPINE COMPUTING was presented. They indicated that they are interested in marketing any SPECTRAVIDEO software be it space invaders or full accounting systems. They undertake to arrange packaging , manufacture and to promote any quality software. Normal royalty payments are 25% of the selling price. They will promote sufficiently high quality software worldwide. The address is

Robert Kilham
Alpine Computing
P.O Box 33865,Auckland9

KIWISOFT have also sent me information about their software sales. They pay royalties of \$4.00 per \$18.00 program sold and \$3.00 per \$15.00 program sold. It is left to the programmer to decide the sales cost. Generally they have a two year term for each agreement. The address is

KIWISOFT
P.O Box 11-053
DUNEDIN

Also from KIWISOFT is a catalogue of their current software. This is produced further in the newsletter along with an order form. (Kiwisoft are now called -- PROGRAMZ)

We have established contact with the AUSTRALASIAN USERS GROUP who have members predominantly in Australia, but also in PAPUA NEW GUINEA, NEW ZEALAND and elsewhere. This group started as the TASMANIAN users group but went national after 6 months. We will be receiving all future newsletters on an exchange basis and have copies of all past newsletters in the library. Contact Dennis for copies. They include an excellent 6 part series on BASIC which turns out to be a very comprehensive and readable description detailing many aspects of the ROMS.

Also from AUSTRALIA we received a disk with about 20 PUBLIC DOMAIN games and an excellent disassembler on it. As these are PUBLIC DOMAIN you need only send Don a disk (or bring one to the meetings) or a cassette. Include a stamped addressed envelope for return. The games are all written by the group members and their are some gems among them. I will copy the whole disk rather than individual programs for you.

Its been a great month for mail. We have finally after a number of unsuccessful attempts got contact with the TARANAKI users group. They have about 50 members, a member has written a book called ... "PEEK AND POKES FOR THE SPECTRAVIDEO". If you want a copy let me know, they haven't finalised cost and so on yet. Some of the things in this book sound very intriguing eg ... booting the DOS without a disk attached, listings of over 2000 individual ROM entry addresses to control BASIC from a machine level, etc ... Sounds great, we'll have a copy in the club library ASAP if not sooner.

We also extended a welcome to Wellington newest SpectraVideo dealer, Kevin Rowell from Micro-Style computers in PETONE, and also a welcome to members of the MASTERTON users who are attempting to form a users group.

With regard to the club library, Dennis is getting this shipshape, we now have available to copy, the Auckland users group newsletter, the Australian groups newsletter and various articles from magazines. Also available, but not to copy are various SPECTRAVIDEO books, the real BASIC REFERENCE manual, and various other documents.

Colin Chin presented a financial report. We now have 70 paid up members from INVERCARGILL to NAPIER and a bank balance of \$581.02. We have been able to maintain a healthy balance with the assistance of Moonshine Computers and Einstein Computers who assist with newsletter costs. We also discussed what this money should be put towards, the club committee will consider this further, possibly a club christmas party would be a good idea.

A couple of remainders about meetings ... there is a \$1.00 fee per meeting to cover costs of the rooms and tea/coffee which the hospital cafe supplies ... and no smoking during meetings.

Connections between expander and computer I have heard that the Australian group have a 1 foot long coaxial connector available ... I have written for details so won't do anything about this until I hear from them.

We have decided that the time is ripe to form a proper club committee and did so at this meeting. The committee members are

Don Stanley, secretary, ph 896379 (newsletter compiler)
 Colin Chin, treasurer, ph 325656
 Dennis Timmons, library, ph 837200
 Ross Wakelin, nat com, ph 374686
 Mike Dalliessi, ph 848416
 Darryl Alison, ph 399310 (week)

These are all home numbers, feel free to ring us about club matters (or problems/newsletter articles etc), but give us a break after 9.00 OK!

Our club meetings now feature a regular dealers corner where dealers have the floor to discuss any matters of interest. Peter Sinke at Moonshine has got copies of ZORK, a classy adventure game (CP/M only) and other CP/M software. He stressed that due to devaluation the price of CP/M software has skyrocketed. Peter also pointed out the dangers of obtaining pirated CP/M software, noting that he had requests from people with such software to help install and use it. Also Peter still has copies of the Basic Reference Manual.

Michael Pollard from Einsteins made note of several books which the store has available, mainly to do with CP/M. One of these is MASTERING CP/M, by Alan R Miller, which I recommend as reading for anyone seriously interested in getting into CP/M. Others were books on DBASE2, VISICALC, COBOL and Microsoft Basic which is useful with the Basic compiler and Mbasic under CP/M.

ODDS & ENDS ..

Bits and Bytes magazine want to publish SpectraVideo programs in

their magazine . They pay for programs , so if you have programs , even small simple ones contact Darryl Alison ph 399510 for more details.

We have had several requests so far for the BASIC manual produced by Ross , Toby and co. Some of you will have already received copies , lets have some feedback for the authors.

Members ... welcome to ... Alan Criglington , Robert Kilham , Kevin Rowell , Iain Scott , J Strachan , Sean Collins, S M Goodway

Members Discounts ... Moonshine Computers in Lower Hutt and Wellington as well as Einsteins Computers are offering discounts on selected goods to members .. enquire at the shops for details. Use membership cards to verify membership when buying discounted goods from these stores. Note that the Einstein discount applies to their stores COUNTRY WIDE.

Contributions to this newsletter are always welcome. Preferably type them on A4 with a good quality ribbon. Anything from software/hardware reviews through to notes on Basic , CP/M , machine code or whatever are acceptable . Send to Don Stanley. Also those of you doing unusual things with your SV eg interfacing with other machinery , lets have a short article on what you are doing and any hints for others considering doing similar things. Also most programs are initially written for cassette. If you convert them to disk , let us know and send details as for the FILE CABINET in the last newsletter. If you use a computer printer to send articles , please use emphasized print if possible.

SOFTWARE REVIEW ... NEW YORK BOMB BLITZ

To my surprise this game is written in BASIC , consequently it is very slow and not particularly inspiring to play. Basically you are a spaceship which has to completely bomb NEW YORK . Your ship goes horizontally across the screen and you drop bombs on the buildings which vary greatly in height. Hit a building with your ship and you're zonked. Each time you destroy all the buildings on the screen you go to another level. I found it frustrating in that only one bomb can drop at a time and they don't always drop but after a while it becomes fairly easy to destroy all the buildings anyway. As an absorbing game it scores lowly in my opinion , but as an example of programming in BASIC and making

reasonably full use of the graphics it is excellent. Worth getting if you want to find out more about Basic graphics.

From the TARANAKI users here are some gems ..

- 1) The copy command .. to copy a whole disk under disk basic you use the COPY command as follows

```
COPY 2 FROM 1
```

where 2 is the drive being copied to and 1 is the drive being copied from. BUT a warning, this command will NOT work properly from WIDTH80. USE ONLY IN WIDTH 40 OR WIDTH 39. You can also COPY 1 FROM 1 which copies the disk back on to itself!!!

- 2) Try this ... DEF USR=&h4782:A=USR(0)
You need to type SCREEN0 to recover from this routine.

- 3) POKE 65077,1 turns inverse characters on
POKE 65077,0 turns them back off

- 4) This is a utility program which can be incorporated into your programs to turn all PRINTs into LPRINTs.

```
65050 z1=&h8000
65051 z1=z1+1
65052 z2=peek(z1) + peek(z1+1) * 256 :if z2=0 end
65053 z1=z1+4
65054 if peek(z1)=&h91 then poke z1,&h9d
65055 if peek(z1)=&h20 then z1=z1+1:goto65054
65056 if peek(z1)=&h3a or peek(z1)=&hda or
    peek(z1)=&hal then z1=z1+1:goto65054
65057 z1=z1+1
65058 if z1=val("&h" + hex$(z2))-1 then 65051
65059 goto 65056
```

- 5) For amusements sake, try POKE 64003,78 and then hold the backspace (<==) key down. CLS to restore usual screen.

- 6) more next month ... Thanks Deane and the Taranaki folks

Theres obviously a lot of technical expertise in TARANAKI. But do ensure that you use COPY from WIDTH40 or 39, I lost a whole disk which completely scrambled from WIDTH80. Works great in WIDTH40 though.

As well as the information from TARANAKI we have also received a wealth of information from AUSTRALIA. Here is a partial memory map from them.

LOCAL ON

MEANING

05d6	Error messages list
f543 *	Reduce screen width to n columns
f7f2/f7f3	Basic program end
f7f4/f7f5	Basic program start
f8f1	Trace command status (0=off, 175=on)
fa02	Key click (non zero = on)
fa03	Y coordinate of cursor
fa04	X " " "
fa05	cursor on or off (non-zero = on)
fa06	bottom up protect (0 to unprotect whole screen, 256-n to protect n bottom screen lines)
fa0a	write colour
fa0b	screen colour
fa0c	border colour
fa1a/fa1b	type ahead buffer pointer (start)
fa1c/fa1d	(end)
fa1e -- fabe+15	function key settings
fe2e/fe2f	system time clock
fe35	reverse video
fe38	caps lock (writing doesn't affect light)
fe3a	screen mode
fe3b	sprite mode
fe78	causes input to be ignored for n/50 secs

* means works in 40 column mode only

also print chr\$(27)+"y4" changes the cursor to the insert character cursor (for 1 line only) and print chr\$(27)+"x4" will restore it to the block cursor.

There are many more of these scattered throughout the Aussie newsletters.

Here are a couple more which I have come across ...

fe42/fe43 is the x co-ordinate of the graphics cursor
 fe44/fe45 is the y co-ordinate of the graphics cursor

ANY MORE FROM ANYONE ?????

For those of you having copies of the CP/M Basic compiler you need the following commands to compile and install a program ..

to compile .. BASCOM = <filename>/L

and if compile successful .. LB0 <filename>/N, <filename>/E

An alternative method to the program above for changing PRINT

into LPRINT is to make use of the OPEN command and the device descriptors CRT and LPT.

eg ...

```
100 IF A=1 THEN OPEN "CRT" FOR OUTPUT AS 1:GOTO 200
150 OPEN "LPT" FOR OUTPUT AS 1
200 PRINT #1,"if a was = 1 , the output will be on the screen"
210 PRINT #1,"which is a CRT , otherwise it will be on a line"
220 PRINT #1,"printer , which is an LPT"
```

Using either method requires a little attention to detail , as the LOCATE command is not valid with a printer so you have to set up output using formats , tab and spc.

GAMES SCORES

SASA	highest score to date	45120	(Michael Wright)
TURBOAT		68390	(Garth Thornton*)
TETRA H		256750	(Colin Chin)
NINJA		53400	"
OMAC		25700	(Don S+)
SPECTRON		8490	(Colin Chin)
TELEBUNNY		87810	"
SUPER CROSS FORCE		748600	(Deirdre Chin)
SECTOR ALPHA		147000	(Barbara Bridger)
KUNG FU		15835	(Angela Chin)

Lets hear about your high scores, BE HONEST, maybe we'll have a games freaks king of the Spectra competition one night to check it all out !!!!

Note that a * in the scores means the game was started in ARCADE level , a + means normal level or equivalent and neither means practice level or unknown.

The I'm only human ... or apologies to RITEMAN owners section

The RITEMAN screen dump program which I put in last months newsletter was not the final version , but a test version which I upgraded and forgot to change in the newsletter. Here is the correct program.

```
5020 DEFINT K,Z:K=0:Z=0
5030 LPRINT CHR$(27)+"A"+CHR$(6);
5040 IF K>=192 THEN RETURN
5050 LPRINT CHR$(27)+"X"+CHR$(255)+CHR$(0);
5060 IF Z=256 THEN 5090
5070 LPRINT CHR$(-2*(POINT(Z,K+6)=15) -4*(POINT(Z,K+5)=15)
      -8*(POINT(Z,K+4)=15) -16*(POINT(Z,K+3)=15) -32*(POINT(Z,K+
```

```

2)=15) -64*(POINT(Z,K+1)=15) -128*(POINT(Z,K)=15)) ;
5080 Z=Z+1 : GOTO 5060
5090 Z=0 : LPRINT CHR$(&HA) ;
5100 K=K+7 : GOTO 5040

```

This program will get round the jagged edges which sometimes appear in graphics screen prints with the other program.

(For Logitec FT 5050 2 change line 5050 to
5050 LPRINT CHR\$(27) + "K" + chr\$(0) + chr\$(1);)

The SV728 personal computer which is fully MSX compatible will be released in New Zealand most likely in the second quarter of 1985. (The story about the 318/328 and MSX as I understand it is as follows... Microsoft developed the MSX specs in 1982 and the first company to adopt MSX was SPECTRAVIDEO. According to those first MSX specs both the 318 and 328 are MSX machines. However when the Japanese companies were approached about MSX the specifications were changed in early 1983, but too late for the 318 and 328 which were already in production. The 728 has been developed around the final 1983 MSX specifications)

And if you really want MSX on your 318 or 328, the SV606 will be released here, it is an MSX cartridge adapter. There are a few differences in the BASIC, so some MSX Basic programs on cassette will not run without a bit of modification.

In the software scene we have some public domain software now being contributed by club members. For those of you not familiar with the public domain idea, programs are contributed to a public domain library and may be freely exchanged and altered. The original author should be acknowledged always, and copies of altered programs should be put in the library. The software we have had contributed is as follows ... (all basic unless stated otherwise)

TABLE .. a basic routine which provides a listing of all variables in a program and the lines at which they are used.

BLANK .. a program to remove all blank characters from a program -- very useful when memory is getting low

.. various programs which appear in the newsletter -- all newsletter programs are public domain, for short programs (which most are) I don't keep a copy so type them in yourselves.

STREK .. a SPECTRAVIDEO version of ... STAR TREK

This list will be updated monthly. I will endeavour to put out a full list a couple of times a year. Any contributions to the PD software library would be welcome -- be they games, utility programs, Basic or CPM. Send them on a cassette to Don (I will return the cassette if you enclose a stamped addressed envelope)

The CP/M Jitters.

CP/M, the 80 column card, and you.

If you use Spectravideo CP/M 2.20 with an 80 column card, all your friends and acquaintances are probably thinking you have a bad case of the DTs. The display on most monitors is very hard on the eyes and is frankly dangerous. Eyestrain and headaches can result from using this combination for too long.

But relax, because help is at hand. CP/M 2.22 has solved the problem. The problem with 2.20 is that the software was written for the North American market. The 80 column card used in the Spectravideo is a marvelous machine, in that the actual video controller chip is fully programmable for things like columns and rows and refresh rates etc. One of the parameters that can be set up is the modulation type; either PAL (the NZ and British type) or NTSC (the North American type). Then you boot CP/M, one of the many things that is done before the sign on message appears is the setting up of the 80 column card (if you have one). CP/M 2.20 set the card up for NTSC modulation, and when used with a PAL standard monitor, jitters and shakes result.

On the CP/M 2.22 distribution disk are two programs (amongst others) that do not appear on the 2.20 disk. These are PAL80.SUB and NTSC80.SUB. These programs can be used to alter your version of CP/M 2.22 (and only 2.22) to suit the modulation of your monitor. Instructions are now included with the 80 column card but here is a brief explanation of what happens.

12

When you type SUBMIT PAL80 on your keyboard, a whole series of programs go into motion.

The DDT80.COM program is loaded and run, referencing the SYSEEN.COM program. The SYSGEN program runs as far as reading your CP/M 2.22 system off the disk into memory. Then the contents of your system are altered in the area which sets up the 80 column card, so that the right commands are there to use the PAL modulation. Then the SYSGEN program is allowed to continue and write the modified system back to the disk. Next time the disk is booted, the 80 column card will use PAL modulation, and your eyes will thank you.

Please note that this series of actions writes to the disk, and therefore should be done on a copy of the Master disk, not the original.

The above changes will not work on a 2.20 disk because the section of code that sets up the 80 column card is in a different place in the CP/M system.

The above is for information only, as there have been a lot of inquiries lately from new owners.

Happy computing.

Ross Wakelin.

JUST WRITE JUNIOR A MUST

(Reviewed by Colin Chin)

When Don asked me to review the Just Write Jnr Cartridge, I didn't realise how difficult this was going to be. So, if anything, I do apologise, because I've nothing to compare it against, having never used Wordstar or any other WP. Additionally, when I've concluded this brief resume, the question will arise "what's been left out?". If I have, then please let me know.

It was firstly, very difficult to know where to start. The following through of the Manual, was not easy. In fact the easiest way, was to simply just "plug" it in, and use it! That is all I did, and all my recent articles in the Newsletter have been written on it, and when it prints, all the text is "justified", so who can complain?

In fact JWjr emphasises to me just what Spectravideo is all about. To realise what SV's capabilities are, without ever seeing this cartridge, I didn't believe that "windows" were possible - and with that SELECT key, it just served to emphasise that with the SV, nothing was impossible.

Immediately upon plugging in, a MENU appears. Usually you then press "E" for edit. On an unexpanded SV318 for instance, 11,516 bytes are available. And away one goes start writing, and down goes the byte count.

Into the "Edit" mode, and function keys enable one to see WORD, LINE, SCROLL, MARK B(eginning) or MARK E(nd). Words or lines can be tabulated, deleted, or scrolled to either end or start of the exercise. Press SELECT key and you are windowed into BLOCK, FIND, CHANGE, FORMAT and COLOR functions. The color function is the odd man out, but it does enable one to change the color of the screen from "white on blue" to Blue, Black, Green, Red or Purple background.

Press "Block"; and you go into another window - COPY, MOVE, DELETE, STORE and RETRIEve. "Format" takes you into PAGE, CENTER, LEFT, RIGHT and WRAP.

For the price of \$79.95, it's a cheap outlay. And I'm sure that nothing else would match this for value. The cheapest other WP on the market in America, is \$US40 for "Color Scripsit"

I cannot emphasis how pleased I've been with JWjr - it

JUST WRITE JUNIOR A MUST

enables me to write letters, script, articles, even print invoices - anything, a typewriter can do, PLUS many other functions. But, to SAVE it, then it can only be a PRINTED COPY or CASSETTE not disc. But, I think, possible from cassette to disk. (I've only just got a disc drive, and with the 1800 baud rate for cassette loading, disc wasn't really essential).

Also, after using JWjr, I now realise just what cartridges can do for Spectravideo. By saving text and outputting hard copy, business packages such as accounts, invoices could be very possible if software could be prepared in cartridge form - something no other manufacturer has yet come up with.

Finally, I can only reffurnish this comparative WP chart for those WP buffs wondering what I am writing about:-

From J.W. Campen

The Justwrite Jr is an exceptionally user friendly word processor package and good value for the price. However it does not have any provision for changing type face - it prints in the basic mode of your printer which for a dot matrix printer would normally be draft mode pica. If you have one of the latest printers with a near letter quality switch you can of course use that switch to get better quality printing. If your printer does not have that feature there is a way around the problem. Before using the Justwrite Jr you set the printer to the type mode you want e.g. emphasised elite, by typing in and entering the appropriate commands or by running a small programme containing the chosen commands. This toggles the printer to the chosen type mode. Then, without touching the printer, switch the computer off, insert your Justwrite Jr cartridge and turn the computer on again. When you print out your copy it will be in the chosen type mode. If using elite or some mode with a greater number of characters per inch than the standard mode you should allow for the extra characters per line in the Justwrite Jr print out menu. For elite mode change the characters per line from the default figure of 65 to 80.

The Justwrite Jr is a useful gadget even if you don't have a printer. You can use it as a readily amended filing system saving data on tape. It can also be used to read data that was saved on tape by another programme using the OPEN statement. Try it on a data file saved on tape with "FILE CABINET".

MSX COMPUTERS NOW NUMBER 31

Members will have seen the influx of MSX material from both the USA and Britain, and wonder where we will stand as far as SV318/328(MS extended Basic S.J) stands against SV728 (MSX-Basic).

In particular, the August 1984 issue of CREATIVE COMPUTING lists 12 different machines with MSX configurations. Notice not Yamaha has 3 different ones, whilst Hitachi, Sony and Toshiba each have 2 different versions.

Also note that Spectravideo 728 is not mentioned. DON'T BE ALARMED as this information is already OUTDATED by a table in a publication called MSX WORLD from America, dated September. 31 different machines are listed as being announced as either released or coming, including the SV728 which has already been seen in the USA only last month, by someone closely associated with the club. CDL have also confirmed its release in both the USA, Britain and Europe.

CDL recently advised all N.Z. dealers that the SV728 will made available on the local market about March 1985. CDL have also promised MSX adapters for both 318/328. Available date unknown.

If club members wish to ensure that this machine does become available in N.Z. then it is up to individual member(s) as dealer clients to "pass the right message on" - or, does the Club put up a United front to both CDL and Federation?

The real question now arises what does the SV728 has that the 328/318 does not? We can only wait and see, but any member who has not seen the brochure on the 728, to write to the Librarian enclosing 5c each sheet plus return postage for 8 photocopy sheets.

The overview of the MSX machines is covered well on page 197 of CREATIVE COMPUTING, and notice some include RGB monitors, some mixes video, some includes light pens, cables, keyboard options etc. The range is also from 16k to 64k.

KIWISOFT CATALOGUE

SPECTRAVIDEO COMPUTER PROGRAMS

PRICES:- All tapes \$18.00 unless marked.

Disk versions \$23.00 unless marked.

All are suitable for use with an un-expanded SV-318 or SV-328.

KS101 QUICKDRAW

Screen Drawing with cursor keys or joystick. Features include line width change, paint, type, move or draw, colour change, circles, ellipses and arcs, type, fill and boxes, save picture to tape/disk and return it, clear drawing area.

SPECIAL FEATURE: co-ordination test, three sample tests, but you can easily create your own by using the extensive drawing options. Suits ages 2 years and over.

***** 4th in SV Software Competition *****

KS102 KIMI COUNTRY - SOUTH ISLAND

With the graphic South Island on your screen you have can:

1. Select correct name from list for location indicated.
 2. Type correct name of location indicated.
 3. Point to position on map of the name indicated.
 4. Section join all places with road.
- Forty five questions included for learning and fun.
Suits ages 8 years and over.

***** Accepted for SV International Marketing *****

KS103 KIMI COUNTRY - NORTH ISLAND

Same as for the South Island except instead of game:

4. Point to location that the question refers to.
5. Insert your own names, locations and questions, save these and load again for later use. Ideal for home or teachers.

KS106 TYPEMASTER

Simple but comprehensive educational program and typing tutor that overcomes the drawbacks of previous versions. Multi-level:

1. **CHARACTERS** - four sets of random numbers only (for young children) through lower & upper case to mind boggling and multiple numbers of random characters (max. no. of characters 135).
2. **WORDS** - four sets included (children's, Basic I, Basic II, Advanced. Wide variety or add your own sets to save/load.
3. **SENTENCES** - two sets of one line sentences, or add your own.

USES - **Teaching** - Teaching children (from 3 yrs) words to using for setting up typing lessons.

KS121 SPECTRONIC CALCULATOR

Calculators made easy with this versatile program. It operates like a normal calculator but has many features that are not normally included in any one model:

1. Calculate Mode, with one model.
 2. Calculator, memory and range of decimal places etc.
 3. Metric Conversion Mode, with all those common conversions.
 4. Listed Conversion Mode, that allows you to do many numbers, for example, and check back for accuracy.
- Also allows printing calculations onto paper.

KS122 SPECTRAMON

Memory (yours) and colours backed up by sound effects are the main features of this educational/game program for all ages. At the base level the simplicity of it attracts participation but there is enough variety to ensure that this will be used again.

KS123 BATS ALIVE

Avoid bats as you collect varying items for points, go down the stairways and back up the elevator to get the ones you missed. Work through several screens and increase in difficulty, an action game with excellent graphics.

Requires co-ordination - 10 yrs and over

ONLY \$15.00

KS131 TROLL HUNT

Thought, memory and luck required to hunt the troll while avoiding various hazards. Poltergeist might grab victory from you or at least make life more difficult. Each replay can be with the previous layout or a different (random) layout.

Good for individual or family.

ONLY \$15.00

There are many KiwiSoft programs currently under development, and will be added to this list as they become available. Soon to be released are Maths (developed by a school teacher), Bochs, Code Master, Maze Master, Pre-School Education etc.

ADDRESS:

GL50 SCREEN LAYOUT SHEETS

\$3.95 each

Use for designing 8x8 or 16x16 sprites, 50 per pad, making graphics planning far easier.

\$3.95 each

A see-through grid that you simply place over whatever you want to reproduce on the screen. Then all you need to do is read off the co-ordinates.

.50 each

1: All KiwiSoft Programs are guaranteed* to operate as indicated in their respective instructions.

2: KiwiSoft Programs may be updated and revised from time to time. Any person who has an old version (check VER NO.) may return their copy of the program to KiwiSoft, and, for a nominal charge (\$2.00), it will be updated and returned.

3. If you would like a modification made to any KiwiSoft program please contact us and we will indicate whether it can be done, and if so what, if any, charge would be made for carrying out the modification. (If the modification becomes a permanent program upgrade the charge will be \$2.00 as for an upgrade).

1. We market independently developed software.

- 1. We market independently developed software.
- 2. We assist programmers to develop software.
- 3. With our contact with the public we ideas get for programs.
- 4. We pass ideas on to programmers that have expertise in an area that we feel will do the best for those ideas.

Send a copy of any original program that you want us to consider and we will return it with a written evaluation, and advise whether we will market that in it's present or modified form..cop
